Simple Program Schemes and Formal Languages J. Engelfriet, 1974-11-19      *Simple Program Schemes and Formal Languages* Joost Engelfriet, 1974      *Formal Language Theory* Ronald V. Book, 2014-05-10 Formal Language Theory Perspectives and Open Problems focuses on the trends and major open problems on the formal language theory The selection first ponders on the methods for specifying families of formal languages open problems about regular languages and generators of cones and cylinders Discussions focus on cylinders of algebraic languages cone of algebraic languages regularity of noncounting classes group complexity specification formalism and grammars The publication then elaborates on very small families of algebraic nonrational languages and formal languages and their relation to automata The book tackles morphisms on free monoids and language theory homomorphisms and survey of results and open problems in the mathematical theory of L systems Topics include single finite substitutions iterated single homomorphisms iterated representation of language families homomorphism equivalence on a language and problems about infinite words The selection is a valuable source of data for researchers interested in the formal language theory      **Syntax-Directed**

**Semantics** Zoltan Fülöp, Heiko Vogler, 2012-12-06 The subject of this book is the investigation of tree transducers Tree transducers were introduced in theoretical computer science in order to study the general properties of formal models which give semantics to context free languages in a syntax directed way Such formal models include attribute grammars with synthesized attributes only denotational semantics and at tribute grammars with synthesized and inherited attributes However these formal models share certain constituents which are irrelevant in the investi gation of the general properties considered in this book In particular we can abstract a from derivation trees of the context free grammar and take trees over some ranked alphabet b from the semantic domain of the model and use the initial term algebra instead and finally c from the machine oriented computation paradigm which maintains the incarnation information of recursive function calls and take a term rewriting semantics instead Ap plying these three abstraction steps to attribute grammars with synthesized attributes only to denotational semantics and to attribute grammars we obtain the concepts of top down tree transducer macro tree transducer and attributed tree transducer respectively The macro attributed tree transducer combines the concepts of the macro tree transducer and the attributed tree transducer This book explores the general properties of these four types of tree transducers      Topics in the Theory of Computation M. Karpinski, J. van Leeuwen, 1985-01-01 This volume contains nine

selected papers presented at the Borgholm conference They were chosen on the basis of their immediate relevance to the most fundamental aspects of the theory of computation and the newest developments in this area These papers which have been extended and refereed fall into eight categories 1 Constructive Mathematics in Models of Computation and Programming 2 Abstract Calculi and Denotational Semantics 3 Theory of Machines Computations and Languages 4 Nondeterminism Concurrency and Distributed Computing 5 Abstract Algebras Logics and Combinatorics in Computation
