Models, Mysteries, and Magic of Molecules Jan C. A. Boeyens, J.F. Ogilvie, 2007-11-03 Molecules have for a long time been of central importance in chemistry as the basis on which all new products and materials have been designed developed and interpreted Since the discovery and characterization of active biomolecules biology has also been transformed into a molecular science With the new developments of molecular devices single molecule spectroscopy time resolved x ray diffraction and the study of mass selected clusters in molecular beams materials science and electronics may move in the same direction The understanding of molecules and the dynamics of their transition between isolated and assembled states rests on three pillars structure activity and function Enormous progress has been made in the experimental study of molecules by diffraction and spectroscopic analysis directed at all three of the basic aspects In the process molecular scientists have developed efficient working models in terms of which to design and interpret their experiments A vital feature of such models is an understanding of intra and intermolecular cohesion and assembly or chemical bonding One challenging aspect is that the working models of chemistry are notoriously difficult to reduce to the fundamental theories of the physical sciences The Indaba 5 meeting held in South Africa during August 2006 was aimed at the progress that is being made to achieve first principle understanding of molecular science structure and dynamics that includes bonding activity and function An interdisciplinary international team of experts came together to document and to probe various aspects of these fundamental questions and their startling conclusions confirm the need for a fresh look at the physical sciences with a view to better understand the mysteries and magic of molecules This book explores the common ground to guide chemists biologists crystallographers spectroscopists and theorists into a deeper recognition of their individual relevance towards painting a holistic picture of scientific endeavour This effort to stimulate interest in multidisciplinary research is rare if not unique

**Flights of Fantasy** Mary Joyce Baxter, 2012-08-30 Flights of Fantasy is a collection of 28 science fiction and fantasy stories They cover a wide range of topics and ideas some probable others perhaps not so probable Is the disappearance of the cats in the first story something that could happen Others are pure fantasy but could they happen too When I look back over the changes that have happened since the end of World War Two I realise that things that would have seemed improbable before then have now become realities Because of this perhaps the events in these stories are not as far fetched

as they seem at first says Mary This collection of tales focuses on ideas not too far from the truth and will provoke thought from like minded readers and fans of sci fi and fantasy fiction
