Kozlovsky, Anatoly I. Krivtsov, Mark D. Zoback, 2012-12-06 The articles in this volume were selected from a series of reports delivered in the Soviet Union at Yaroslavl during the International Seminar Super deep drilling and deep geophysical research which was organized and held in August 1988 by the Ministry of Geology of the USSR jointly with the Inter Union Commission on the Lithosphere One of the most important problems of modern geology is the state and prospects of further development of deep continental structure investigations was discussed at the seminar with the participation of 245 scientists and specialists from 19 countries At the plenary and sectional meetings of the seminar 83 reports were delivered discussions on the most interesting problems were organized the exchange of ideas between the leading scientists a round table took place in discussion The distinctive feature of the present collection of articles is the wide scope of the investigation of the Earth's crust The reports elucidate such subjects of world importance as 1 achievements in implementation of major scientific programs investigating deep Earth structure and plans for their further materialization 2 theoretical problems of carrying out geological geophysical explorations and drilling operations and 3 new approaches to the study of the Earth's interior The results of deep investigations of individual countries and organizations are considered and concrete technical elaboration methods of work execution etc are discussed **Very Deep Hole Systems Engineering Studies** Woodward-Clyde Consultants, 1983 Energy Research Abstracts ,1992 Scientific and Technical Aerospace Reports ,1981 **Fiscal Year 1990 Department of Energy Authorization** United States. Department of Energy, 1982 **Observation of the Continental Crust through Drilling I** C. Barry Raleigh, 2012-12-06 Drilling deep into the earth holds a fascination for earth scientists derived in part from the fact that the drill hole is the ultimate test of a hypothesis When surface exploration methods have been fully utilized and all the geological inferences drawn about the structure beneath the surface we must finally drill to sample directly the third dimension of the crust of the earth The drill is thus the tool of choice of the energy

and minerals resources industry Because of high cost drilling has been only sparingly used for solving fundamental problems in the earth sciences But now having used the quite sophisticated methodology of exploration geophysics the exciting structural detail emerging from seismic reflection profiling in particular has led several nations to begin a major program of scientific drilling to solve some of the major problems in the earth sciences What is described in this volume are the blueprints for national research programs in France the Federal Republic of Germany Japan and the United States The Soviet Union has already embarked on a major drilling effort the results of which are soon to be published Results of course are still few and this first volume is more concerned with the problems to be solved
