**Magnetic Fields of Stars** Илья Николаевич Гнедин, Yu N. Gnedin, T. M. Natsvlishvili, 2000      **Fundamental Stellar Properties: The Interaction Between Observation and Theory** Timothy R. Bedding, Andrew J. Booth, John M. Davis, 2013-12-01 This Symposium began with a proposal for a meeting to honour Emeritus Professor Robert Hanbury Brown on the occasion of his 80th birthday He requested that any such meeting should be on a topic that would be of benefit to the Sydney University Stellar Interferometer SUSI program With SUSI and several other high angular resolution instruments either in operation or coming on line within the next decade and with advances in astrometry spectroscopy and in theoretical models of stellar atmospheres and interiors it appeared to be both appropriate and timely to hold a symposium on Fundamental Stellar Properties the Interaction between Observation and Theory The emphasis of the meeting was on the critical assessment of the quality accuracy and prospects for improvement of the observational data and theoretical models on the outstanding problems in stellar astrophysics and on the feasibility of achieving the observational and theoretical advances required for their solution Invited papers comprised the major part of the oral program and the speakers responded to the challenge issued by the Scientific Organising Committee to critically review the current status and prospects for their area of expertise The Symposium was opened by the Chancellor of the University of Sydney Emeritus Professor Dame Leonie Kramer who welcomed the 126 participants from 22 countries on behalf of the University The oral program included 52 invited reviews and papers and 10 contributed papers      The Role of Magnetic Fields in the Formation of Stars Derek Ward-Thompson, Ray S. Furuya, Yusuke Tsukamoto, Christopher F. McKee, 2020-06-29      *The A-Star Puzzle (IAU S224)* International Astronomical Union. Symposium, 2005-04-25 Over the last few decades nuclear processes radiation transfer opacities and many other important physical processes have been incorporated in the modelling of stars As knowledge of these processes has advanced it has become clear that other associated physical processes are not well understood This volume investigates these processes focusing on convection diffusion rotation and magnetic fields It is a valuable resource for researchers in the field of stellar astrophysics and graduate students      **Sunspots: Theory and Observations** J.H. Thomas, N.O. Weiss, 2012-12-06 This volume contains the invited papers presented at the NATO Advanced Research Workshop on the Theory of Sunspots held in Cambridge England 22-27 September 1991 The idea of holding this Workshop first arose during the Solar Optical Telescope workshop on Theoretical Problems in High Resolution Solar Physics in Munich in 1985 At that meeting separate discussion groups were formed to consider specific topics in solar physics The discussion group on sunspots recommended that there be a meeting devoted to theoretical problems associated with sunspots the motivation being the consensus that theory seemed to lag behind the observational evidence in our quest for a satisfactory understanding of the physics of sunspots This recommendation was warmly received and the two of us were designated to organize the Workshop Although the Workshop eventually took place later than originally envisioned the delay turned out to

be fortunate and the timing of the Workshop was ideal for a number of reasons There have been remarkable improvements in high resolution observations of sunspots in the past few years and many important new observational results were presented for the first time at this Workshop by groups working at the Lockheed Palo Alto Research Laboratories the Swedish and German telescopes in the Canary Islands and the V S National Solar Observatory Vector magnetographs and Stokes polarimetry have at last given us reliable measurements of the vector magnetic fields in sunspots

**Magnetohydrodynamics in Binary Stars** C. G. Campbell, 2018-10-13 Magnetism in binary stars is an area of central importance in stellar astrophysics The second edition of Magnetohydrodynamics in Binary Stars is a major revision of the first edition The material has been updated and extended including additional chapters on the origins of the stellar magnetic fields and accretion disc magnetic winds A comprehensive account is given of the subject from the early work up to the latest results The unifying theme remains the redistribution of angular momentum by magnetic stresses This occurs in a wide variety of ways including magnetic stellar and orbital coupling magnetic channelling of accretion streams magnetic stellar coupling to accretion discs dynamo field coupling in discs and magnetic stellar and disc winds The associated stellar spin and orbital evolution problems including stability are also considered Although the main focus is on binary stars much of the work on accretion discs and wind flows has more general astrophysical relevance Convenient formulae are included that can be compared to observations making the book useful to observers as well as theorists and there are extensive reference lists The material is mainly aimed at research workers but parts of the text could be useful for postgraduate courses in magnetic stellar astrophysics topics      *Scientific and Technical Aerospace Reports* , 1994 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database      [Astrophysics Principles](#) Naveen Basu, 2025-02-20 Dive into the wonders of the universe with Astrophysics Principles an engaging and comprehensive book that explores the fundamental principles governing the behavior and phenomena of the cosmos With a clear and accessible writing style this book takes readers on a captivating journey through the vast realms of astrophysics from the smallest particles to the largest cosmic structures Starting with the foundational concepts of astrophysics including the nature of light the laws of gravity and the properties of matter in space the book progresses into the fascinating world of celestial bodies It covers the life cycles of stars the formation of galaxies and the dynamics of black holes and neutron stars One of the key strengths of Astrophysics Principles is its ability to make complex topics understandable without sacrificing depth offering enlightening and engaging discussions on stellar evolution cosmology and the origins of the universe The book also includes discussions on recent discoveries and developments in astrophysics keeping the content relevant and up to date Throughout the pages illustrative diagrams images and real world examples enhance the reader's understanding of abstract concepts The inclusion of exercises and problem solving sections further reinforces learning and allows readers to apply their knowledge Astrophysics Principles is more than

just a textbook it is a journey of discovery for anyone fascinated by the cosmos Whether you are a student an enthusiast or a professional in the field this book serves as an invaluable resource for exploring the principles that govern our universe and the mysteries that continue to inspire scientific inquiry Literature 1991, Part 2 Astronomisches

Rechen-Institut,2013-06-29 Astronomy and Astrophysics Abstracts appearing twice a year has become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world **Nuclear Science Abstracts** ,1976 *The Interplay Between Massive Star*

Rodono,2013-11-11 IAU Colloquium No 71 had its immediate origins in a small gathering of people interested in the optical and UV study of flare stars which took place during the 1979 Montreal General Assembly We recognized that a fundamental change was taking place in the study of these objects Space borne instruments especially IUE and Einstein and a new generation of ground based equipment were having a profound effect on the range of investigations it was possible to make To extract maximum benefit from these new possibilities it would be necessary as never before to have good communication with colleagues in other disciplines for instance with atomic and solar physicists Similarly studies of phenomena associated with the outer atmospheres of the late type stars could now hope to give significant insights into certain aspects of solar activity So in view of the wide range of backgrounds of those participating the meeting had an unusually high proportion of invited reviews while most of the contributed papers were presented as posters It is gratifying that in the short time since the meeting a good deal of correspondence has been received from participants remarking on the success of this format Once the decision had been taken in principle to hold the meeting a very considerable amount of work fell on the two organizing committees viz the Scientific and Local Organizing Committees The Scientific Organizing Committee was chaired by D J Mullan and consisted of A D

**Upper Main Sequence Stars with Anomalous Abundances** C.R. Cowley,M.M. Dworetzky,C. Mégessier,2012-12-06 This volume contains papers presented at IAU Colloquium No 90 at the Crimean Astrophysical Observatory in May of 1985 A few additional contributions are included from authors who for various reasons were unable to attend the meeting Four years have passed since the last major international conference on chemically peculiar stars of the upper main sequence was held in Liege Belgium in 1981 Previous conferences were held in 1975 Vienna Austria and in 1965 Greenbelt Maryland USA As the proceedings of this Colloquium show the recent availability of ultraviolet spectra of large numbers of normal and chemically peculiar A and B stars is having a major

impact on the way we study these objects and has led to many new exciting and unanticipated results Simultaneously the more traditional study of optical spectra has been advanced through the increasing use of very high spectral resolution with high signal to noise detectors The chemically peculiar CP stars on the upper main sequence belong in the standard framework within which we understand stellar evolution and the history of matter Recent work has made it clear that the unusual chemistry and magnetic structure of these objects is of relevance across the broad domain of stellar astronomy from the upper main sequence to horizontal branch stars and white dwarfs Metal poor J Boo as well as metal rich Ap Am stars are an integral part of the picture *INIS Atomindex*, 1985 Literature 1983, Part 1 S.
