Maintenance Modeling And Optimization:

Maintenance, Modeling and Optimization Mohamed Ben-Daya, Salih O. Duffuaa, Abdul Raouf, 2012-12-06 Production costs are being reduced by automation robotics computer integrated manufacturing cost reduction studies and more These new technologies are expensive to buy repair and maintain Hence the demand on maintenance is growing and its costs are escalating This new environment is compelling industrial maintenance organizations to make the transition from fixing broken machines to higher level business units for securing production capacity On the academic front research in the area of maintenance management and engineering is receiving tremendous interest from researchers Many papers have appeared in the literature dealing with the modeling and solution of maintenance problems using operations research OR and management science MS techniques This area represents an opportunity for making significant contributions by the OR and MS communities Maintenance Modeling and Optimization provides in one volume the latest developments in the area of maintenance modeling Prominent scholars have contributed chapters covering a wide range of topics We hope that this initial contribution will serve as a useful informative introduction to this field that may permit additional developments and useful directions for more research in this fast growing area The book is divided into six parts and contains seventeen chapters Each chapter has been subject to review by at least two experts in the area of maintenance modeling and optimization The first chapter provides an introduction to major maintenance modeling areas illustrated with some basic models Part II contains five chapters dealing with maintenance planning and scheduling Part III deals with preventive maintenance in six chapters Part IV focuses on condition based maintenance and contains two chapters Part V deals with integrated production and maintenance models and contains two chapters Part VI addresses issues related to maintenance and new technologies and also deals with Just in Time JIT and Maintenance Reliability and Maintenance Modeling with Optimization Mitsutaka Kimura, Satoshi Mizutani, Mitsuhiro Imaizumi, Kodo Ito, 2023 Reliability and maintenance modeling with optimization is the most fundamental and interdisciplinary research area that can be applied to every technical and management field Reliability and Maintenance Modeling with Optimization Advances and Applications aims at providing the most recent advances and achievements in reliability and maintenance The book discusses replacement repair and inspection offers estimation and statistical tests covers accelerated life testing explores warranty analysis manufacturing and includes service reliability The targeted readers are researchers interested in reliability and maintenance engineering The book can serve as supplemental reading in professional seminars for engineers designers project managers and graduate students

reliability and maintenance The book discusses replacement repair and inspection offers estimation and statistical tests covers accelerated life testing explores warranty analysis manufacturing and includes service reliability The targeted readers are researchers interested in reliability and maintenance engineering The book can serve as supplemental reading in professional seminars for engineers designers project managers and graduate students On the Maintenance Modeling and Optimization of Repairable Systems Suzan Alaswad,2012 The use of mathematical modeling for the purpose of analyzing and optimizing the performance of repairable systems is widely studied in the literature In this dissertation we study two different scenarios on the maintenance modeling and optimization of repairable systems First we study the long run availability of a traditional repairable system that is subjected to imperfect corrective maintenance We use Kijima s second virtual age model to describe the imperfect repair process Because of the complexity of the underlying probability models we use simulation modeling to estimate availability performance and meta modeling to convert the reliability and maintainability parameters of the repairable system into an availability estimate without the simulation effort As a last step we add age based perfect preventive maintenance to our analysis Second we optimize a preventive maintenance policy for a two component repairable system When either component fails instantaneous minimal and costly corrective maintenance is performed on the component At equally spaced discrete points during the system s useful life the decision maker has the option to perform instantaneous imperfect and costly preventive maintenance on one or both of the components to instantaneously replace one or both of the components or to do nothing We use a Genetic Algorithm in an attempt to find a cost optimal set of preventive maintenance and replacement decisions

Discussion of the paper “Application of maintenance optimization models: a review and analysis” written by R. Dekker Christophe Gouin,2011-05-18

Scientific Essay from the year 2011 in the subject Business economics Business Management Corporate Governance grade 19 5 20 University of Rennes 1 language English abstract Maintenance management and optimization of maintenance is getting more and more important for a large number of companies The use of automated machines and equipment in order to produce goods is very common today hence companies have to rely on reliable machines which are available and working 100% of the time In order to attain a flawless working factory maintenance management is crucial However companies cannot hope that the decisions they make concerning maintenance management are optimal and they start therefore to use decision support systems based on optimization methods Also maintenance management is very complex and a lot of different decisions have to be made like defining maintenance intervals personal planning when to buy spare parts when to replace equipment etc It is easier for companies to base their decisions on a mathematical program and therefore the use of maintenance management optimization models arises Optimization models proved to be very advantageous in other sectors so it was just a matter of time before optimization methods were ported to maintenance management Problematic in the case of maintenance optimization are the very specific maintenance problems resulting in a large number of different

maintenance optimization models It is consequently very difficult to get a good overview about the different models and their application R Dekker who has worked a lot on maintenance optimization and on operations research in maintenance management wrote a paper about maintenance optimization methods and their application Application of maintenance optimization models a review and analysis It summarizes maintenance management in general gives a brief history of maintenance management describes different optimization methods their practical application problems which can occur by applying the models etc In this paper I will discuss the work of R Dekker first of all there will be a description of the paper explaining what it is about and giving a resume of important aspects In the second section the paper will be compared to other papers concerning maintenance optimization different and identical aspects will be explained Furthermore some information will be added in order to simplify the comprehension of maintenance optimization models Finally I will comment the paper and give my opinion about the aspects that I liked and what I would describe differently

Maintenance models for systems subject to measurable deterioration Robin Pieter Nicolai, 2008 Complex engineering systems such as bridges roads flood defence structures and power pylons play an important role in our society Unfortunately such systems are subject to deterioration meaning that in course of time their condition falls from higher to lower and possibly even to unacceptable

levels Maintenance actions such as inspection local repair and replacement should be done to retain such systems in or restore them to acceptable operating conditions After all the economic consequences of malfunctioning infrastructure systems can be huge In the life cycle management of engineering systems the decisions regarding the timing and the type of maintenance depend on the temporal uncertainty associated with the deterioration Hence it is of importance to model this uncertainty In the literature deterioration models based on Brownian motion and gamma process have had much attention but a thorough comparison of these models lacks In this thesis both models are compared on several aspects both in a theoretical as well as in an empirical setting Moreover they are compared with physical process models which can capture structural insights into the underlying process For the latter a new framework is developed to draw inference Next models for imperfect maintenance are investigated Finally a review is given for systems consisting of multiple components
