Modelling and Simulation of Sheet Metal Forming Processes Marta C. Oliveira,José Valdemar Fernandes,2020-04-22 The numerical simulation of sheet metal forming processes has become an indispensable tool for the design of components and their forming processes This role was attained due to the huge impact in reducing time to market and the cost of developing new components in industries ranging from automotive to packing as well as enabling an improved understanding of the deformation mechanisms and their interaction with process parameters Despite being a consolidated tool its potential for application continues to be discovered with the continuous need to simulate more complex processes including the integration of the various processes involved in the production of a sheet metal component and the analysis of in service behavior The quest for more robust and sustainable processes has also changed its deterministic character into stochastic to be able to consider the scatter in mechanical properties induced by previous manufacturing processes Faced with these challenges this Special Issue presents scientific advances in the development of numerical tools that improve the prediction results for conventional forming process enable

the development of new forming processes or contribute to the integration of several manufacturing processes highlighting the growing multidisciplinary characteristic of this field

Validation of Numerical Simulations by Digital Scanning of 3D Sheet Metal Objects Samir Lemeš, 2010-06-23 Validation is the subjective process that determines the accuracy with which the mathematical model describes the actual physical phenomenon This research was conducted in order to validate the use of finite element analysis for springback compensation in 3D scanning of sheet metal objects The measurement uncertainty analysis was used to compare the digitized 3D model of deformed sheet metal product with the 3D model obtained by simulated deformation The influence factors onto 3D scanning and numerical simulation processes are identified and analysed It is shown that major contribution to measurement uncertainty comes from scanning method and deviations of parts due to manufacturing technology The analysis results showed that numerical methods such as finite element method can successfully be used in computer aided quality control and automated inspection of manufactured parts
