The study of creativity and imagination is growing rapidly in disciplines including psychology, sociology, neuroscience and education. The inter and multidisciplinary study of music and developments in music psychology in particular mean that studies of musical imagination and creativity in action are now distinctly possible. *Musical Imaginations* is a wide ranging multidisciplinary review of the latest theory and research on musical creativity, performance and perception by some of the most eminent scholars in their respective disciplines. The topics addressed in this book include the investigation of creativity and imagination in music and emotion, composition and improvisation, performance and performance traditions, listening strategies, different musical genres and cultural belief systems, social collaboration, identity formation and the development of psychologically based strategies and interventions for the enhancement of performing musicians. With creativity now a topic of significant interest, this book will be valuable to all those in the fields of psychology, sociology, neuroscience, education as well as to musicians themselves dealing with practical as well as theoretical issues in music therapy, performance and education.
