Scale Dependence And Scale Invariance In Hydrology:

Scale Dependence and Scale Invariance in Hydrology Garrison Sposito, 1998-08-13 Whether processes in the natural world are dependent or independent of the scale at which they operate is one of the major issues in hydrologic science In this volume leading hydrologists present their views on the role of scale effects in hydrologic phenomena occurring in a range of field settings from the land surface to deep fractured rock Self contained and thought provoking chapters cover both theoretical and applied hydrology They provide critical insights into important topics such as general circulation models floods river networks vadose zone processes groundwater transport and fluid flow through fractured media This book is intended as an accessible introduction for graduate students and researchers to some of the most significant questions and challenges that will face hydrologic science in the twenty first century

Scaling Methods in Soil Physics Yakov Pachepsky, David E. Radcliffe, H. Magdi Selim, 2003-03-26 The scaling issue remains one of the largest problems in soil science and hydrology This book is a unique compendium of ideas conceptual approaches techniques and methodologies for scaling soil physical properties Scaling Methods in Soil Physics covers many methods of scaling that will be useful in helping scientists across a range of soil rel

Applied Stochastic Hydrogeology Yoram Rubin, 2003-03-27 Stochastic Subsurface Hydrogeology is the study of subsurface geological heterogeneity and its effects on flow and transport process using probabilistic and geostatistical concepts This book presents a rational systematic approach for analyzing and modeling subsurface heterogeneity and for modeling flow and transport in the subsurface and for prediction and decision making under uncertainty The book covers the fundamentals and practical aspects of geostatistics and stochastic hydrogeology coupling theoretical and practical aspects with examples case studies and guidelines for applications and provides a summary and review of the major developments in these areas

Chaos in Hydrology Bellie Sivakumar, 2016-11-16 This authoritative book presents a comprehensive account of the essential roles of nonlinear dynamic and chaos theories in understanding modeling and forecasting hydrologic systems This is done through a systematic presentation of 1 information on the salient characteristics of hydrologic systems and on the existing theories for their modeling 2 the fundamentals of nonlinear dynamic and chaos theories methods for chaos identification and prediction and associated issues 3 a review of the applications of chaos theory in hydrology and 4 the scope and potential directions for the future This book bridges the divide between the deterministic and the stochastic schools in hydrology and is well suited as a textbook for hydrology courses

Vadose Zone Hydrology Marc B. Parlange, Jan W. Hopmans, 1999 The vadose zone is the region between ground level and the upper limits of soil fully saturated with water Hydrology in the zone is complex nonlinear physical chemical and biological interactions all affect the transfer of heat mass and momentum between the atmosphere and the water table This book takes an interdisciplinary approach to vadose zone hydrology bringing together

insights from soil science hydrology biology chemistry physics and instrumentation design The chapters present state of the art research focusing on new frontiers in theory experiment and management of soils The collection addresses the full range of processes from the pore scale to field and landscape scales *Advances in Agronomy*, 2005-02-23 *Advances in Agronomy* continues to be recognized as a leading reference and a first rate source of the latest research in agronomy Major reviews deal with the current topics of interest to agronomists as well as crop and soil scientists As always the subjects covered are varied and exemplary of the myriad subject matter dealt with by this long running serial Editor Donald Sparks former president of the Soil Science Society of America and current president of the International Union of Soil Science is the S Hallock du Pont Chair of Plant and Soil Sciences at The University of Delaware Volume 85 contains seven excellent reviews that discuss topics critical to agricultural and environmental sustainability Maintains the highest impact factor among serial publications in Agriculture Presents timely reviews on important agronomy issues Enjoys a long standing reputation for excellence in the field

Geographic Information Science and Mountain Geomorphology Michael Bishop, John F. Shroder, 2004-06-30 From the reviews Bishop and Schroder both Univ of Nebraska at Omaha have brought together an impressive group of practitioners in the relatively new application of geographic information science to mountain geomorphology In doing so they have produced valuable first overall coverage of a high tech approach to mountain three dimensional research More than 40 contributing authors discuss a wide range of related aspects The book is well bound and well produced each chapter provides an extensive source of references The numerous line drawings are clearly reproduced although the mediocre quality of photographic reproduction limits the value of air photographs and satellite images As is characteristic of many edited collections there is some variation in chapter quality Some of the writing is so dense that it requires minute concentration one chapter for instance has 14 pages of references from a total of 43 pages Nevertheless this is a vital compendium for a rapidly expanding field of research Summing Up Recommended Upper division undergraduates through professionals J D Ives Choice March 2005

Integrated Natural Resource Management Bruce Morgan Campbell, Jeffrey Sayer, 2003 This book which contains 15 separately authored chapters discusses both the principles and applications of an integrated approach to natural resource management Such an approach must embrace the complexity of systems and redirect research towards the greater inclusion of issues such as participatory approaches multi scale analysis and an array of tools for system analysis information management and impact assessment Case studies particularly from developing countries in Asia Africa and Latin America are included This book is of interest to a wide range of readers in many disciplines including forestry soil and management sciences agriculture and development studies
