Scale-Space Theory in Computer Vision Tony Lindeberg, 2013-03-09 The problem of scale pervades both the natural sciences and the visual arts The earliest scientific discussions concentrate on visual perception much like today and occur in Euclid's c 300 B C Optics and Lucretius c 100-55 B C On the Nature of the Universe A very clear account in the spirit of modern scale space theory is presented by Boscovitz in 1758 with wide ranging applications to mathematics physics and geography Early applications occur in the cartographic problem of generalization the central idea being that a map in order to be useful has to be a generalized coarse grained representation of the actual terrain Miller and Voskuil 1964 Broadening the scope asks for progressive summarizing Very much the same problem occurs in the realistic artistic rendering of scenes Artistic generalization has been analyzed in surprising detail by John Ruskin in his Modern Painters who even describes some of the more intricate generic scale spaces in singularities in detail Where the ancients considered only the merging of blobs under blurring Ruskin discusses the case where a blob splits off another one when the resolution is decreased a case that has given rise to confusion even in the modern literature Scale-Space Theory in Computer Vision Bart ter Haar

Romeny, 1997-06-18 This book constitutes the refereed proceedings of the First International Conference on Scale Space Theory for Computer Vision Scale Space 97 held in Utrecht The Netherlands in July 1997 The volume presents 21 revised full papers selected from a total of 41 submissions Also included are 2 invited papers and 13 poster presentations This book is the first comprehensive documentation of the application of Scale Space techniques in computer vision and in the broader context in image processing and pattern recognition **Scale-Space Theory in Computer Vision** Tony

Scale-space Theory In Computer Vision T. Lindeberg, **Gaussian Scale-Space Theory** Jon Sporring, Mads Nielsen, Luc Florack, Peter Johansen, 2013-04-17 Gaussian scale space is one of the best understood multi resolution techniques available to the computer vision and image analysis community It is the purpose of this book to guide the reader through some of its main aspects During an intensive weekend in May 1996 a workshop on Gaussian scale space theory was held in Copenhagen which was attended by many of the leading experts in the field The bulk of this book originates from this workshop Presently there exist only two books on the subject In contrast to Lindeberg s monograph Lindeberg 1994e this book collects contributions from several scale space researchers whereas it complements the book edited by ter Haar Romeny Haar Romeny 1994 on non linear techniques by focusing on linear diffusion This book is divided into four parts The reader not so familiar with scale space will find it instructive to first consider some potential applications described in Part 1 Parts II and III both address fundamental aspects of scale space Whereas scale is treated as an essentially arbitrary constant in the former the latter emphasizes the deep structure i e the structure that is revealed by varying scale Finally Part IV is devoted to non linear extensions notably non linear diffusion techniques and morphological scale spaces and their relation to the linear case The Danish National Science Research Council is gratefully acknowledged for providing financial support for the workshop under grant no 9502164

Curvature Scale Space Representation: Theory, Applications, and MPEG-7 Standardization F. Mokhtarian, M. Bober, 2013-11-11 MPEG 7 is the first international standard which contains a number of key techniques from Computer Vision and Image Processing The Curvature Scale Space technique was selected as a contour shape descriptor for MPEG 7 after substantial and comprehensive testing which demonstrated the superior performance of the CSS based descriptor Curvature Scale Space Representation Theory Applications and MPEG 7 Standardization is based on key publications on the CSS technique as well as its multiple applications and generalizations The goal was to ensure that the reader will have access to the most fundamental results concerning the CSS method in one volume These results have been categorized into a number of chapters to reflect their focus as well as content The book also includes a chapter on the development of the CSS technique within MPEG standardization including details of the MPEG 7 testing and evaluation processes which led to the selection of the CSS shape descriptor for the standard The book can be used as a supplementary textbook by any university or institution offering courses in computer and information science

Front-End Vision and Multi-Scale Image Analysis Bart M. Haar Romeny, 2008-10-24 Many approaches have been proposed to solve the problem of finding the optic flow field of an image sequence Three major classes of optic flow computation techniques can be discriminated see for a good overview Beauchemin and Barron [Beauchemin 1995] gradient based or differential methods phase based or frequency domain methods correlation based or area methods feature point or sparse data tracking methods In this chapter we compute the optic flow as a dense optic flow field with a multi scale differential method The method originally proposed by Florack and Nielsen [Florack 1998a] is known as the Multiscale Optic Flow Constrain Equation MOFCE This is a scale space version of the well known computer vision implementation of the optic flow constraint equation as originally proposed by Horn and Schunck [Horn 1981] This scale space variation as usual consists of the introduction of the aperture of the observation in the process The application to stereo has been described by Maas et al [Maas 1995a Maas 1996a] Of course difficulties arise when structure emerges or disappears such as with occlusion cloud formation etc Then knowledge is needed about the processes and objects involved In this chapter we focus on the scale space approach to the local measurement of optic flow as we may expect the visual front end to do 17.2 Motion detection with pairs of receptive fields As a biologically motivated start we begin with discussing some neurophysiological findings in the visual

system with respect to motion detection **Advances in Imaging and Electron Physics** ,2013-06-08 Advances in Imaging and Electron Physics features cutting edge articles on the physics of electron devices especially semiconductor devices particle optics at high and low energies microlithography image science and digital image processing electromagnetic wave propagation electron microscopy and the computing methods used in all these domains Contributions from leading authorities Informs and updates on all the latest developments in the field *Machine Learning and Data Mining in Pattern Recognition* Petra Perner,2007-08-28 Ever wondered what the state of the art is in machine learning and data mining Well now you can find out This book constitutes the refereed proceedings of the 5th International Conference on Machine Learning and Data Mining in Pattern Recognition held in Leipzig Germany in July 2007 The 66 revised full papers presented together with 1 invited talk were carefully reviewed and selected from more than 250 submissions The papers are organized in topical sections **Optical and Digital Image Processing** Gabriel Cristobal,Peter Schelkens,Hugo Thienpont,2013-02-12 In recent years Moore s law has fostered the steady growth of the field of digital image processing though the computational complexity remains a problem for most of the digital image processing applications In parallel the research domain of optical image processing has matured potentially bypassing the problems digital approaches were suffering and bringing new applications The advancement of technology calls for applications and knowledge at the intersection of both areas but there is a clear knowledge gap between the digital signal processing and the optical processing communities This book covers the fundamental basis of the optical and image processing techniques by integrating contributions from both optical and digital research communities to solve current application bottlenecks and give rise to new applications and solutions Besides focusing on joint research it also aims at disseminating the knowledge existing in both domains Applications covered include image restoration medical imaging surveillance holography etc a very good book that deserves to be on the bookshelf of a serious student or scientist working in these areas Source Optics and Photonics News **Image Structure** Luc Florack,2013-04-17 Despite the fact that images constitute the main objects in computer vision and image analysis there is remarkably little concern about their actual definition In this book a complete account of image structure is proposed in terms of rigorously defined machine concepts using basic tools from algebra analysis and differential geometry Machine technicalities such as discretisation and quantisation details are de emphasised and robustness with respect to noise is manifest From the foreword by Jan Koenderink It is my hope that the book will find a wide audience including physicists who still are largely unaware of the general importance and power of scale space theory mathematicians who will find in it a principled and formally tight exposition of a topic awaiting further development and computer scientists who will find here a unified and conceptually well founded framework for many apparently unrelated and largely historically motivated methods they already know and love The book is suited for self study and graduate courses the carefully formulated exercises are designed to get to grips with the subject matter and prepare the reader for original

Koenderink, 1997-08-27 The book constitutes the refereed proceedings of the International Workshop on Algebraic Frames for the Perception Action Cycle AFPAC 97 held in Kiel Germany in September 1997 The volume presents 12 revised full papers carefully reviewed and selected for inclusion in the book Also included are 10 full invited papers by leading researchers in the area providing a representative state of the art assessment of this rapidly growing field The papers are organized in topical sections on PAC systems low level and early vision recognition of visual structure processing of 3D visual space representation and shape perception inference and action and visual and motor neurocomputation **Theory and Applications of Image Analysis II** Gunilla Borgefors, 1995 This book contains 31 selected papers out of 136 accepted from the 9th Scandinavian Conference on Image Analysis held in Uppsala Sweden 6-9 June 1995 They represent the very best of what is currently done in image analysis world wide describing very recent work The papers have been both considerably expanded and updated compared to the version in the conference proceedings giving the readers a much better understanding of the issues at hand The papers cover both theory and successful applications There are chapters on Edges and Curves d104ure Depth and Stereo Scene Analysis and 3D Motion thus covering the chain from feature extraction to computer vision Two important application areas are covered Medical and Industrial
