Scandinavian Conference On Artificial Intelligence 91:

Scandinavian Conference on Artificial Intelligence--91 Brian Mayoh,1991 **Scandinavian conference on artificial intelligence - 91** ,1991 **Developments in Global Optimization** Immanuel M. Bomze,Tibor Csendes,R. Horst,Panos M. Pardalos,2013-03-14 In recent years global optimization has found applications in many interesting areas of science and technology including molecular biology chemical equilibrium problems medical imaging and networks The collection of papers in this book indicates the diverse applicability of global optimization Furthermore various algorithmic theoretical developments and computational studies are presented Audience All researchers and students working in mathematical programming SCAI '97 G. Grahne,1997 The major theme of this book is Intelligent Agents An agent is a hardware or software system that is autonomous interactive with and reactive to its environment and other agents An agent can also be pro active in taking the initiative in goal directed behaviour Intelligent Agents are one of the most important and exciting areas of research and development in computer science today **Handbook of Philosophical Logic** Dov M. Gabbay,Franz Guenther,2013-11-09 It is with great pleasure that we are presenting to the community the second edition of this extraordinary handbook It has been over 15 years since the publication of the first edition and there have been great changes in the landscape of philosophical logic since then The first edition has proved invaluable to generations of students and researchers in formal philosophy and language as well as to consumers of logic in many applied areas The main logic article in the Encyclopaedia Britannica 1999 has described the first edition as the best starting point for exploring any of the topics in logic We are confident that the second edition will prove to be just as good The first edition was the second handbook published for the logic community It followed the North Holland one volume Handbook of Mathematical Logic published in 1977 edited by the late Jon Barwise The four volume Handbook of Philosophical Logic published 1983 1989 came at a fortunate temporal junction at the evolution of logic This was the time when logic was gaining ground in computer science and artificial intelligence circles These areas were under increasing commercial pressure to provide devices which help and or replace the human in his daily activity This pressure required the use of logic in the modelling of human activity and organisation on the one hand and to provide the theoretical basis for the computer program constructs on the other

Algebraic Computability and Enumeration Models Cyrus F. Nourani,2016-02-24 This book Algebraic Computability and Enumeration Models Recursion Theory and Descriptive Complexity presents new techniques with functorial models to address important areas on pure mathematics and computability theory from the algebraic viewpoint The reader is first introduced to categories and functorial models with Kleene algebra examples *Artificial Intelligence in Education* Ben Du Boulay,R. Mizoguchi,1997 The theme of this book is Knowledge and Media in Learning Systems and papers that explore the emerging roles of intelligent multimedia and distributed technologies as well as computer supported collaboration within that theme are included The spread of topics is very wide encompassing both well established areas such as student modelling as

well as more novel topics such as distributed intelligent tutoring on the World Wide Web Far from undermining the need to understand how learning and teaching interact the newer media continue to emphasise the interdependence of these two processes Collaboration and tools for collaboration are the major topics of interest Understanding how human learners collaborate how peer tutoring works and how the computer can play a useful role as either a more able or even a less able learning partner are all explored here

Formal Aspects of Context Pierre Bonzon,Marcos Cavalcanti,Rolf Noss,2013-04-17 We welcome Volume 20 Formal Aspects of Context Context has always been recognised as strongly relevant to models in language philosophy logic and artificial intelligence In recent years theoretical advances in these areas and especially in logic have accelerated the study of context in the international community An annual conference is held and many researchers have come to realise that many of the old puzzles should be reconsidered with proper attention to context The volume editors and contributors are from among the most active front line researchers in the area and the contents shows how wide and vigorous this area is There are strong scientific connections with earlier volumes in the series I am confident that the appearance of this book in our series will help secure the study of context as an important area of applied logic D M Gabbay INTRODUCTION This book is a result of the First International and Interdisciplinary Conference on Modelling and Using Context which was organised in Rio de Janeiro in January 1997 and contains a selection of the papers presented there refereed and revised through a process of anonymous peer review The treatment of contexts as bona fide objects of logical formalisation has gained wide acceptance in recent years following the seminal impetus by McCarthy in his Turing award address

Nonmonotonic Reasoning Grigoris Antoniou,Mary-Anne Williams,1997 Nonmonotonic reasoning provides formal methods that enable intelligent systems to operate adequately when faced with incomplete or changing information In particular it provides rigorous mechanisms for taking back conclusions that in the presence of new information turn out to be wrong and for deriving new alternative conclusions instead Nonmonotonic reasoning methods provide rigor similar to that of classical reasoning they form a base for validation and verification and therefore increase confidence in intelligent systems that work with incomplete and changing information Following a brief introduction to the concepts of predicate logic that are needed in the subsequent chapters this book presents an in depth treatment of default logic Other subjects covered include the major approaches of autoepistemic logic and circumscription belief revision and its relationship to nonmonotonic inference and briefly the stable and well founded semantics of logic programs

Affective and Emotional Aspects of Human-Computer Interaction M. Pivec,2006-03-02 The learning process can be seen as an emotional and personal experience that is addictive and motivates learners to proactive behavior Divided in three parts this title discusses major topics such as emotions motivation games and game experience

Explainable and Interpretable Models in Computer Vision and Machine Learning Hugo Jair Escalante,Sergio Escalera,Isabelle Guyon,Xavier

Baró,Yağmur Güçlütürk,Umut Güçlü,Marcel van Gerven,2018-11-29 This book compiles leading research on the development

of explainable and interpretable machine learning methods in the context of computer vision and machine learning Research progress in computer vision and pattern recognition has led to a variety of modeling techniques with almost human like performance Although these models have obtained astounding results they are limited in their explainability and interpretability what is the rationale behind the decision made what in the model structure explains its functioning Hence while good performance is a critical required characteristic for learning machines explainability and interpretability capabilities are needed to take learning machines to the next step to include them in decision support systems involving human supervision This book written by leading international researchers addresses key topics of explainability and interpretability including the following Evaluation and Generalization in Interpretable Machine Learning Explanation Methods in Deep Learning Learning Functional Causal Models with Generative Neural Networks Learning Interpretable Rules for Multi Label Classification Structuring Neural Networks for More Explainable Predictions Generating Post Hoc Rationales of Deep Visual Classification Decisions Ensembling Visual Explanations Explainable Deep Driving by Visualizing Causal Attention Interdisciplinary Perspective on Algorithmic Job Candidate Search Multimodal Personality Trait Analysis for Explainable Modeling of Job Interview Decisions Inherent Explainability Pattern Theory based Video Event Interpretations

Leondes,2000-07-11 The design of knowledge systems is finding myriad applications from corporate databases to general decision support in areas as diverse as engineering manufacturing and other industrial processes medicine business and economics In engineering for example knowledge bases can be utilized for reliable electric power system operation In medicine they support complex diagnoses while in business they inform the process of strategic planning Programmed securities trading and the defeat of chess champion Kasparov by IBM s Big Blue are two familiar examples of dedicated knowledge bases in combination with an expert system for decision making With volumes covering Implementation Optimization Computer Techniques and Systems and Applications this comprehensive set constitutes a unique reference source for students practitioners and researchers in computer science engineering and the broad range of applications areas for knowledge based systems *Clinical Management of Herpes Viruses* Stephen L. Sacks,1995 Much has been said about managing herpesvirus infections since the discovery of acyclovir more than 15 years ago This book aims to bring practical advice to the key clinician who is faced with managing these infections It addresses questions like there are antiviral treatments for many of these infections but who should be getting these drugs and who should not What are the advantages if any of the new drugs over the old ones Which patients should be targeted for intervention What is the clinical reality of antiviral resistance Where do the up and coming vaccines fit into the picture When should therapy be discontinued or reassessed How are patients presenting other than chorioretinitis in AIDS or pneumonitis in transplantation The contributing clinician scientists deal with these questions and many more Listed by Biological Abstracts RRM BIOSIS volume

López,2022-05-31 Case based reasoning is a methodology with a long tradition in artificial intelligence that brings together reasoning and machine learning techniques to solve problems based on past experiences or cases Given a problem to be solved reasoning involves the use of methods to retrieve similar past cases in order to reuse their solution for the problem at hand Once the problem has been solved learning methods can be applied to improve the knowledge based on past experiences In spite of being a broad methodology applied in industry and services case based reasoning has often been forgotten in both artificial intelligence and machine learning books The aim of this book is to present a concise introduction to case based reasoning providing the essential building blocks for the design of case based reasoning systems as well as to bring together the main research lines in this field to encourage students to solve current CBR challenges **Advances in**

Intelligent Systems Francesco Carlo Morabito,1997 Intelligent Systems can be defined as systems whose design mainly based on computational techniques is supported in some parts by operations and processing skills inspired by human reasoning and behaviour Intelligent Systems must typically operate in a scenario in which non linearities are the rule and not as a disturbing effect to be corrected Finally Intelligent Systems also have to incorporate advanced sensory technology in order to simplify man machine interactions Several algorithms are currently the ordinary tools of Intelligent Systems This book contains a selection of contributions regarding Intelligent Systems by experts in diverse fields Topics discussed in the book are Applications of Intelligent Systems in Modelling and Prediction of Environmental Changes Cellular Neural Networks for NonLinear Filtering NNs for Signal Processing Image Processing Transportation Intelligent Systems Intelligent Techniques in Power Electronics Applications in Medicine and Surgery Hardware Implementation and Learning of NNs
