Proceedings of the County Legislature of Suffolk County Suffolk County (N.Y.) County Legislature, 1982 *Proceedings of the Board of Supervisors of Suffolk County* Suffolk County (N.Y.). Board of Supervisors, 1988 Safety and Security in Multiagent Systems Mike Barley, Haris Mouratidis, Amy Unruh, Diana F. Gordon-Spears, Paul Scerri, Fabio MASSACCI, 2009-10-15 As intelligent autonomous agents and multiagent system applications become more pervasive it becomes increasingly important to understand the risks associated with using these systems Incorrect or inappropriate agent behavior can have harmful effects including financial cost loss of data and injury to humans or systems For ample NASA has proposed missions where multiagent systems working in space or on other planets will need to do their own reasoning about safety issues that concern not only themselves but also that of their mission Likewise industry is interested in agent systems that can search for new supply opportunities and engage in semi automated negotiations over new supply contracts These systems should be able to securely negotiate such arrangements and decide which credentials can be requested and which credentials may be disclosed Such systems may encounter environments that are only partially understood and where they must learn for themselves which aspects of their environment are safe and which are dangerous Thus security and safety are two central issues when developing and deploying such systems We refer to a multiagent system's security as the ability of the system to deal with threats that are intentionally caused by other intelligent agents and or systems and the system's safety as its ability to deal with any other threats to its goals ECKM 2015 Proceedings of the 16th European Conference on Knowledge Management Juan Gabriel Cegarra, 2012 **ECKM 2012-Proceedings of the 13th European Conference on Knowledge Management** Juan Gabriel Cegarra, 2012 **Proceedings of the 18th International Conference on Environmental Degradation of Materials in Nuclear Power Systems - Water Reactors** John H. Computer Vision for X-Ray Testing Domingo Mery, Christian Pieringer, 2020-12-21 FIRST EDITION This accessible textbook presents an introduction to computer vision algorithms for industrially relevant applications of X ray testing

Features introduces the mathematical background for monocular and multiple view geometry describes the main techniques for image processing used in X ray testing presents a range of different representations for X ray images explaining how these enable new features to be extracted from the original image examines a range of known X ray image classifiers and classification strategies discusses some basic concepts for the simulation of X ray images and presents simple geometric and imaging models that can be used in the simulation reviews a variety of applications for X ray testing from industrial inspection and baggage screening to the quality control of natural products provides supporting material at an associated website including a database of X ray images and a Matlab toolbox for use with the book s many examples *Metrics For Software Conceptual Models* Marcela Genero,Mario Piattini,Coral Calero,2005-01-04 The idea that measuring quality is the key to developing high quality software systems is gaining relevance Moreover it is widely recognised that the key to obtaining better software systems is to measure the quality characteristics of early artefacts produced at the conceptual modelling phase Therefore improving the quality of conceptual models is a major step towards the improvement of software system development Since the 1970s software engineers had been proposing high quantities of metrics for software products processes and resources but had not been paying any special attention to conceptual modelling By the mid 1990s however the need for metrics for conceptual modelling had emerged This book provides an overview of the most relevant existing proposals of metrics for conceptual models covering conceptual models for both products and processes *Similarity Search* Pavel Zezula,Giuseppe Amato,Vlastislav Dohnal,Michal Batko,2006-06-07 The area of similarity searching is a very hot topic for both research and c mercial applications Current data processing applications use data with c siderably less structure and much less precise queries than traditional database systems Examples are multimedia data like images or videos that offer query by example search product catalogs that provide users with preference based search scientific data records from observations or experimental analyses such as biochemical and medical data or XML documents that come from hetero neous data sources on the Web or in intranets and thus does not exhibit a global schema Such data can neither be ordered in a canonical manner nor meani fully searched by precise database queries that would return exact matches This novel situation is what has given rise to similarity searching also ferred to as content based or similarity retrieval The most general approach to similarity search still allowing construction of index structures is modeled in metric space In this book Prof Zezula and his co authors provide the first monograph on this topic describing its theoretical background as well as the practical search tools of this innovative technology **Books in Print Supplement** ,2002 **Analytical Characterization of Aluminum, Steel, and Superalloys** D. Scott MacKenzie,George E. Totten,2005-10-10 Authored by top researchers this book discusses methodologies to quantify the properties and microstructures of aluminum steel and superalloys It is a unique reference to advanced laboratory techniques in the context of characterization and property evaluation methodologies enabling the evolution of stronger and more function specific compositions Topics include
