Technology and National Security James Kadtke,John Wharton,National Defense University (U S),2018-03-29 The authors present arguments about the role that technology and science will play within the international scene and globalization corridor as a way to develop a national security strategy for years to come Part of the discussion observes the past present and future of technology innovation within global governments including the sharing of data artificial intelligence AI military policy defense strategies and more For instance globalization of science and technology emerging and unpredictable threats both manmade and natural conventional and emerging weapons of mass destruction and an inversion of technology flow from the private to public sectors all present challenges to our national security Many countries are now dramatically increasing their investments in science technology and commercialization particularly in Asia and including many nontraditional players such as Vietnam and Singapore From a grand strategic perspective one might observe that in the decades to come in a world dominated by pervasive advanced technologies the countries that are most able to create acquire and utilize these disruptive technologies will lead the world This technological capacity will be one of if not the most important global resources Technological capacity will become the new oil Other topical related products can be found here Armed Robotics Emergence Weapons Systems Life Cycles Analysis and New Strategic Realities Enhancing Identity Development at Senior Services Colleges Military Communications A Test for Technology Closer Than You Think The Implications of the Third Offset Strategy for the U S Army **Science, Technology, and U.S. National Security Strategy** Raymond F.
