Science and Polity in France Charles Coulston

Gillispie, 2009-01-10 By the end of the eighteenth century the French dominated the world of science And although science and politics had little to do with each other directly there were increasingly frequent intersections This is a study of those transactions between science and state knowledge and power on the eve of the French Revolution Charles Gillispie explores how the links between science and polity in France were related to governmental reform modernization of the economy and professionalization of science and engineering

Wrestling

with Nature Peter Harrison, Ronald L. Numbers, Michael H. Shank, 2011-05-01 When and where did science begin Historians have offered different answers to these questions some pointing to Babylonian observational astronomy some to the speculations of natural philosophers of ancient Greece Others have opted for early modern Europe which saw the triumph of Copernicanism and the birth of experimental science while yet another view is that the appearance of science was postponed until the nineteenth century Rather than posit a modern definition of science and search for evidence of it in the past the contributors to *Wrestling with Nature* examine how students of nature themselves in various cultures and periods of history have understood and represented their work The aim of each chapter is to explain the content goals methods practices and institutions associated with the investigation of nature and to articulate the strengths limitations and boundaries of these efforts from the perspective of the researchers themselves With contributions from experts representing different historical periods and different disciplinary specializations this volume offers a fresh perspective on the history of science and on what it meant in other times and places to wrestle with nature

Charles Bell and the Anatomy of Reform Carin

Berkowitz, 2015-11-17 Sir Charles Bell was among the last of a generation medical men who formed their careers their research and their publications through the private classrooms of early nineteenth century London whose ambitions for reform were fundamentally about conserving something quintessentially British and whose politics were shaped by the exigencies of developing a living through various kinds of patronage in a time when careers in medical science simply did not

exist Within a decade or two that world was gone Professionalization and regularized education the ambitions of reformers had been realized along with regular career paths With that change the classroom shattered its functions divided among other spaces each with its own audience and function the laboratory the clinic the classroom They are the spaces of modern medicine the ones we recognize today and we see them as the hallmark of medical science Through Bell's story artfully told by the author we witness medical science and medical reform in London's classrooms at a time when modern medicine with its practical universities with set curricula staffed by medical professionals was being born

The Oxford Handbook of European Romanticism Paul Hamilton, 2016-01-14 T The Oxford Handbook to European Romanticism brings together leading scholars in the field to examine the intellectual literary philosophical and political elements of European Romanticism The book focuses on the cultural history of the period extending from the French Revolution to the uprisings of 1848 It begins with a series of chapters examining key texts written by major writers in languages including French German Italian Spanish Russian Hungarian Greek and Polish amongst others A second section then explores the naturally interdisciplinary quality of Romanticism exemplified by the different discourses with which writers of the time set up an internal comparative dynamic These chapters highlight the sense a discourse gives of being written knowledgeably against other pretenders to completeness or comprehensiveness of self understanding of the time Discourses typically advance their own claims to resume European culture collaborating with and at the same time trying to assimilate each other in the process The main examples featured here are history geography drama theology language philosophy political theory the sciences and the media Each chapter offers an original and individual interpretation of an inherently comparative world of individual writers and the discursive idioms to which they are historically subject Together the forty one chapters provide a comprehensive and provocative overview of European Romanticism

The Great Nation in Decline Sean M. Quinlan, 2016-03-16 This book studies how doctors responded to and helped shape deep seated fears about nervous degeneracy and population decline in France between 1750 and 1850 It uncovers a rich and far ranging medical debate in which four generations of hygiene activists used biomedical science to transform the self sexuality and community in order to regenerate a sick and decaying nation a programme doctors labelled physical and moral hygiene Moreover it is shown how doctors imparted biomedical ideas and language that allowed lay people to make sense of often bewildering socio political changes thereby giving them a sense of agency and control over these events Combining a chronological and thematic approach the six chapters in this book trace how doctors began their medical crusade during the middle of the Enlightenment how this activism flowered during the French Revolution and how they then revised their views during the period of post revolutionary reaction The study concludes by arguing that medicine acquired an unprecedented political social and cultural position in French society with doctors becoming the primary spokesmen for bourgeois values and thus helped to define the new world that emerged from the post revolutionary period

France in the Age of the Scientific State

Robert G. Gilpin, 2015-12-08 Charles de Gaulle has often warned France and other European nations of the threat they face from advanced scientific and technological countries such as the United States and the Soviet Union Robert Gilpin examines this technological gap which France fears and the efforts France is making to introduce change and efficiency into her science administration He discusses the gap as it affects all of Europe and suggests that if western European nations are unable to form a common European administration of science policy and remain the main world importers of discoveries and exporters of brains they may become steadily weaker in international affairs Originally published in 1968 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 *Labour, Science and Technology in France, 1500-1620* Henry Heller, 2002-05-09 This 1995 book is a detailed study of technological and scientific ideas and innovation in early modern France **Picturing Time** Marta Braun, 1992 A complete illustrated survey of Etienne Jules Marey's work that investigates the far reaching effects of her inventions on stream of consciousness literature psychoanalysis Bergsonian philosophy and the art of cubists and futurists

Science, Vine and Wine in Modern France Harry W. Paul, 2002-07-18 Science Vine and Wine in Modern France examines the role of science in the civilization of wine in modern France Viticulture the science of the vine itself and oenology the science of winemaking are its subjects Together they can boast of at least two major triumphs the creation of the post phylloxera vines that repopulated late nineteenth century vineyards devastated by the disease and the understanding of the complex structure of wine that eventually resulted in the development of the widespread wine models of Bordeaux Burgundy and Champagne This is the first analysis of the scientific battle over the best way to save the French vineyards and the first account of the growth of oenological science in France since Chaptal and Pasteur Patronage and Royal Science in Seventeenth-Century France David S. Lux, 2019-06-30 A unique study in the culture of seventeenth century French science Patronage and Royal Science in Seventeenth Century France focuses on the brief revolutionary period 1650 1680 that launched Europe's New Age of Academies David S Lux provides a lively account of one of the most intriguing scientific institutions in Louis XIV's France the Academie de Physique de Caen organized in 1662 Lux investigates why this promising institution with a talented membership and sympathetic private patrons foundered after it was provided royal support finally to close its doors in 1672 Drawing upon hitherto unexploited archival materials the author discovers the circumstances of one institution's failure and develops a provocative new interpretation of the shift from privately funded to state funded science in France during the second half of the seventeenth century Lux provides a rare view of the everyday concerns of seventeenth century science as it was practiced by those other than the immortals of the Scientific Revolution

Patronage and Royal Science in Seventeenth Century France will interest sociologists of science and philosophers of science as well as historians particularly those who work on early modern science and scientific institutions and French cultural history

Medical Consulting by Letter in France, 1665-1789 Robert Weston, 2016-04-29 Ailing

seventeenth and eighteenth century French men and women members of their families or their local physician or surgeon could write to high profile physicians and surgeons seeking expert medical advice This study the first full length examination of the practice of consulting by letter provides a cohesive portrayal of some of the widespread ailments of French society in the latter part of the early modern period It explores how and why changes occurred in the relationships between those who sought and those who provided medical advice Previous studies of epistolary medical consulting have limited attention to the output of one or two practitioners but this study uses the consultations of around 100 individual practitioners from the mid seventeenth century to the time of the Revolution to give a broad picture of patients and physicians perceptions of illnesses and how they should be treated on a day to day basis It makes a unique contribution to the history of medicine as no other study has been undertaken in the consulting by letter of surgeons as opposed to physicians It is shown that the well known disputation between physicians and surgeons tells only a part of the history whereas in fact necessity required that these two professions had to work together for the patients good

Becoming a Physician Thomas Neville Bonner, 2000 Focusing on the social intellectual and political context in which medical education took place Thomas Neville Bonner offers a detailed analysis of transformations in medical instruction in the United Kingdom France Germany and the United States between the Enlightenment and World War II From a unique comparative perspective this study considers how divergent approaches to medical instruction in these countries mirrored as well as impacted their particular cultural contexts The book opens with an examination of key developments in medical education during the late eighteenth century and continues by tracing the evolution of clinical teaching practices in the early 1800s It then charts the rise of laboratory based teaching in the nineteenth century and the progression toward the establishment of university standards for medical education during the early twentieth century Throughout the author identifies changes in medical student populations and student life including the opportunities available for women and minorities

Popular Science Arthur Mee, 1913

France, 1800-1914 Roger Magraw, 2014-07-22

Nineteenth century France was a society of apparent paradoxes It is famous for periodic and bloody revolutionary upheavals for class conflict and for religious disputes yet it was marked by relative demographic stability gradual urbanisation and modest economic change class conflict and ongoing religious and cultural tensions Incorporating much recent research Roger Magraw draws both upon still valuable insights derived from the new social history of the 1960s and upon more recent approaches suggested by gender history cultural anthropology and the linguistic turn
