Scientists at Work
Student Worksheet (Metabolism)

INTRODUCTION

This worksheet explores concepts shown in the Scientists at Work video [The Science of an Extreme Athlete](#). The video investigates adaptations that allow deer mice living at high elevations to stay warm and active during the winter.

Through watching the video and completing this worksheet, you'll learn how two different populations of mice survive in their respective environments: one on top of a mountain and the other close to sea level. You will also apply your knowledge of the body functions and adaptations in other species. The topics in this worksheet relate to all mammals, not just mice. You will be able to apply what you learn to your own eating and physical activity habits, including how to use certain types of foods to help you meet any goals.

PROCEDURE

Answer the following questions based on the information provided and what you learned from the video. You may want to use the video's transcript as a reference.

- The video discusses how a deer mouse's diet helps it survive. Like mice, humans also eat diets that contain carbohydrates (sugars) and fats.
 - Carbohydrates, also called "carbs," include sugars, starches, and fibers. Give an example of a food with carbohydrates (for example, your favorite carbohydrate to eat if you have one).
Bread
 - The "fats" mentioned in the video are examples of **lipids**: a group of molecules that includes fats, waxes, steroid hormones, and oils. Give an example of a food with lipids (for example, your favorite lipid to eat if you have one).
Bacon
- The video focuses on highland deer mice. If the scientists wanted to learn more about highland deer mice, why were they also collecting data from lowland deer mice?

They were also collecting data from lowland deer mice in order to have a control group to compare the data to the experimental group (the highland deer mice).

- Identify the major differences between highland and lowland deer mice by filling out the following table:

	Highland Deer Mice	Lowland Deer Mice
Environment (Describe characteristics of the places where each population lives.)	Mountains/High Elevation Cold weather/Snow/Ice Not much oxygen available	Flatter land/lower elevation Warmer weather More oxygen available
Energy supply (What type of "metabolic fuel" do they use more or less of?)	Highland deer mice use more fats.	Lowland deer mice use less fats.
