In order to protect company's information assets such as sensitive customer records, health care records etc, the security practitioner first needs to find out what needs to be protected, what risks those assets are exposed to, what controls are in place to offset those risks and where to focus attention for risk treatment. This is the true value and purpose of information security risk assessments. Effective risk assessments are meant to provide a defensible analysis of residual risk associated with your key assets so that risk treatment options can be explored. *Information Security Risk Assessment Toolkit* gives you the tools and skills to get a quick, reliable and thorough risk assessment for key stakeholders. Based on author's experiences of real world assessments, reports and presentations. Focuses on implementing a process rather than theory that allows you to derive a quick and valuable assessment. Includes a companion web site with spreadsheets you can utilize to create and maintain the risk assessment. *Engineering Information Security* Stuart Jacobs, 2015-12-01. *Engineering Information Security* covers all aspects of information security using a systematic engineering approach and focuses on the viewpoint of how to control access to information. Includes a discussion about protecting storage of private keys, SCADA, Cloud, Sensor and Ad Hoc networks. Covers internal operations, security processes, monitors, reviews exceptions and plans remediation. Over 15 new sections. Instructor resources such as lecture slides, assignments, quizzes and a set of questions organized as a final exam. If you are an instructor and adopted this book for your course, please email ieeeproposals@wiley.com to get access to the additional instructor materials for this book.
