

## Case Study Research

*Stephen Elstub and Gianfranco Pomatto*

Deliberative democrats are usually interested in finding evidence for different kinds of causal claims. For example, what causes people to change their mind? In which contexts is deliberation most likely to cause opinion change? What conditions are required for good quality deliberation? Under what conditions can deliberation be consequential? There are different ways of studying these questions. Statistical research usually focuses on responding to these questions across a large number of cases, paying particular attention to average effects.

There is a different way to answer these questions, however, and that is through case study research. Case study research can be defined as 'the study of the particularity and complexity of a single case, coming to understand its activity in important circumstances' (Stake 1995, ix). A case can be a person, event, activity, process, group, organization, or institution. The focus on an individual unit means that within-case analysis is conducted as opposed to comparative cross-case research (Ryan 2019; see also Ryan, Chapter 17 in this volume). This is to enable intensive and context-dependent data collection and analysis on important cases that include a large number of variables, thereby producing more depth, detail, richness, completeness, and variance than cross unit analysis can generally achieve. In general, the more cases there are, the less data is collected on each (Gomm et al. 2004). Case studies enable researchers to move beyond covariation between variables and focus on 'causes-of-effects' in a specific case (Mahoney and Goertz 2006).

Case study research has been prevalent throughout the history of deliberative democracy due to the depth of insight and attention to context that this method provides (Boswell and Corbett 2017). In this chapter, we argue that case study research has been integral in helping deliberative democracy develop from a new normative theory to an established and mature theory guided by significant empirical evidence. Moreover, we suggest that as deliberative democracy research moves towards a systemic approach, case studies will continue to be essential for understanding the practice of deliberative democracy across the huge variety of contexts that a system involves. Case studies are a research approach that is relevant to both positivist and interpretivist research traditions. However, in this chapter, we suggest that case study research can help deliberative democracy move beyond this distinction. Guidance is provided on how to select a suitable case and how to collect and analyse data, specifically in relation to the field of deliberative democracy.
