The Chicago Guide to Writing about Numbers

Jane E. Miller, 2008-04-15 People who work well with numbers are often stymied by how to write about them Those who don't often work with numbers have an even tougher time trying to put them into words For instance scientists and policy analysts learn to calculate and interpret numbers but not how to explain them to a general audience Students learn about gathering data and using statistical techniques but not how to write about their results And readers struggling to make sense of numerical information are often left confused by poor explanations Many books elucidate the art of writing but books on writing about numbers are nonexistent Until now Here Jane Miller an experienced research methods and statistics teacher gives writers the assistance they need The Chicago Guide to Writing about Numbers helps bridge the gap between good quantitative analysis and good expository writing Field tested with students and professionals alike this book shows writers

how to think about numbers during the writing process Miller begins with twelve principles that lay the foundation for good writing about numbers Conveyed with real world examples these principles help writers assess and evaluate the best strategy for representing numbers She next discusses the fundamental tools for presenting numbers tables charts examples and analogies and shows how to use these tools within the framework of the twelve principles to organize and write a complete paper By providing basic guidelines for successfully using numbers in prose The Chicago Guide to Writing about Numbers will help writers of all kinds clearly and effectively tell a story with numbers as evidence Readers and writers everywhere will be grateful for this much needed mentor

Creative Ways of Using and Disseminating Federal Information United States. Congress. House. Committee on Government Operations. Government Information, Justice, and Agriculture Subcommittee, 1992 The purpose of the hearings presented in this Congressional document was to highlight the enterprising inventive and imaginative ways that people use public information and ways that agencies disseminate it Witnesses were called who could provide information about 1 how federal data is used by people who make genuine contributions to the nation s economy and democratic processes 2 the importance of making information available in electronic formats 3 innovative and inexpensive ways of making information available 4 the needs of users of federal information 5 the techniques and technologies of information access and 6 the impact of the high cost of public information This report includes statements from 17 witnesses representing a variety of agencies such as federal agencies including the General Accounting Office the Association of Research Libraries the information industry including USA Today and DIALOG nonprofit organizations such as the Regional Contracting and Assistance Center which disseminates public information to assist in economic development and public interest organizations including OMB Watch a research educational and advocacy organization that monitors Executive Branch activities Also included are prepared statements submitted for the record by the

witnesses and four appendices which include three additional statements an article from the Wall Street Journal working notes and a letter KRN Proceedings of the ... Annual Federal Depository Library Conference ,1998 **Handbook on Material and Energy Balance Calculations in Material Processing, Includes CD-ROM** Arthur E. Morris,H. Alan Fine,Gordon Harold Geiger,2011-09-06 This book approaches the subject of material and energy balances from two directions First it emphasizes the fundamental principles of the conservation of mass and energy and the consequences of these two principles Second it applies the techniques of computational chemistry to materials processing and introduces new software developed by the author especially for material and heat balances The third edition reflects the changes in the professional engineer s practice in the last 30 years reflecting the dramatic shift away from metallurgical engineering and the extractive industry towards materials engineering A large and growing number of recent graduates are employed in such fields as semiconductor processing environmental engineering and the production and processing of advanced and exotic materials for aerospace electronic and structural applications The advance in computing power and software for the desktop computer has significantly changed the way engineers make computations and the biggest change comes from the computational approach used to solve problems The spreadsheet program Excel is used extensively throughout the text as the main computational engine for solving material and energy balance equations and for statistical analysis of data The use of Excel and the introduction of the add in programs enables the study of a range of variables on critical process parameters and emphasis is placed on multi device flowsheets with recycle bypass and purge streams whose material and heat balance equations were previously too complicated to solve by the normally used hand calculator The Excel based program FlowBal helps the user set up material and heat balance equations for processes with multiple streams and units
