coastline deeply incised and with former mountain peaks represented by numerous off shore islands This book reviews the factors creating and maintaining Hong Kong s living shore and describes the wide range of plants and animals found within the intertidal boundaries of the shore A full range from exposure to shelter is to be found from communities of the sheer rock faces beaten by the storm waves of the South China Sea to the denizens of mudflats in high shelter at the heads of harbours and inlets For the first time the occupants of these various shores are illustrated and described both as individual species and as components of a rich mosaic of life The factors of pollution and development that are destroying the diversity of the rich complex of shores are described
