Beyond the Quartic Equation R. Bruce King, 2009-01-16 One of the landmarks in the history of mathematics is the proof of the nonexistence of algorithms based solely on radicals and elementary arithmetic operations addition subtraction multiplication and division for solutions of general algebraic equations of degrees higher than four This proof by the French mathematician Evariste Galois in the early nineteenth century used the then novel concept of the

permutation symmetry of the roots of algebraic equations and led to the invention of group theory an area of mathematics now nearly two centuries old that has had extensive applications in the physical sciences in recent decades The radical based algorithms for solutions of general algebraic equations of degrees 2 quadratic equations 3 cubic equations and 4 quartic equations have been well known for a number of centuries The quadratic equation algorithm uses a single square root the cubic equation algorithm uses a square root inside a cube root and the quartic equation algorithm combines the cubic and quadratic equation algorithms with no new features The details of the formulas for these equations of degree d $d=2, 3, 4$ relate to the properties of the corresponding symmetric groups S_d which are isomorphic to the symmetries of the equilateral triangle for $d=3$ and the regular tetrahedron for $d=4$ *Beyond The Learning Organization* Jerry Gilley, 2000-01-07 The next step in organizational development showing companies how to integrate all areas of human resource practice to drive continuous learning *Beyond Reason and Tolerance* Robert J. Thompson Jr., 2014-01-10 The major challenges facing higher education are often framed in terms of preparing students for life long learning Society's 21st century needs require civic minded individuals who have the intellectual and personal capabilities to constructively engage political ethnic and religious differences work effectively and live together with many different kinds of people in a more global society In this volume Robert J Thompson aims to influence the current conversation about the purposes and practices of higher education *Beyond Reason and Tolerance* adopts a developmental science basis to inform the transformations in undergraduate educational practices that are necessary to empower students to act globally and constructively engage difference It synthesizes current scholarship regarding the nature and development of three core capacities deemed essential A personal epistemology that reflects a sophisticated understanding of knowledge beliefs and ways of thinking empathy and the capacity to understand the mental states of others and an integrated identity that includes values commitments and a sense of agency for civic and social responsibility *Beyond Reason and Tolerance* argues that to foster the development of these capabilities colleges and universities must recommit to providing a formative liberal education and adopt a developmental model of undergraduate education as a process of intellectual and personal growth involving empathy as well as reasoning values as well as knowledge and identity as well as competencies Thompson focuses on emerging adulthood as an especially dynamic time of reorganization and development of the brain that both influences and is influenced by the undergraduate experience Advances in our understanding of human development and learning are synthesized with regard to the direct implications for undergraduate education practices *UML'99 - The Unified Modeling Language: Beyond the Standard* Robert B.
