Restoration Ecology And Sustainable Development:

Restoration Ecology and Sustainable Development Krystyna M. Urbanska, Nigel R. Webb, Peter J. Edwards, 1997-12-11
The problem of ecosystem damage is international a recent estimate suggests that 43% of the earth's terrestrial surface has a reduced capacity to supply benefits to humanity because of recent direct impacts of land use The discipline of restoration ecology aims to provide a scientifically sound basis for the reconstruction of degraded or destroyed ecosystems and to produce self supporting systems which are to some degree resilient to subsequent damage This book looks at the main issues with a broad perspective using case studies where appropriate and considering the economic and social context in which restoration is carried out It is essential to reverse current trends by developing and using our knowledge of how to restore ecosystems The book is therefore important for scientists professionals in ecological restoration landscape architects and environmental engineers and more generally for those involved in sustainable development

Ecological Restoration in International Environmental Law Anastasia Telesetsky, An Cliquet, Afshin Akhtar-Khavari, 2016-12-01 Human activities are depleting ecosystems at an unprecedented rate In spite of nature conservation efforts worldwide many ecosystems including those critical for human well being have been damaged or destroyed States and citizens need a new vision of how humans can reconnect with the natural environment With its focus on the long term holistic recovery of ecosystems ecological restoration has received increasing attention in the past decade from both scientists and policymakers Research on the implications of ecological restoration for the law and law for ecological restoration has been largely overlooked This is the first published book to examine comprehensively the relationship between international environmental law and ecological restoration While international environmental law IEL has developed significantly as a discipline over the past four decades this book enquires whether IEL can now assist states in making a strategic transition from not just protecting and maintaining the natural environment but also actively restoring it Arguing that states have international duties to restore this book offers reflections on the philosophical context of ecological restoration and the legal content of a duty to restore from an international law European Union law and national law perspective The book concludes with a discussion of several contemporary themes of interest to both lawyers and ecologists including the role of private actors protected areas and climate change in ecological restoration

Restoration Ecology and Sustainable Development Geobotanisches Institut, Stiftung Rübél (Zürich), 1996

Restoration and Reclamation of Boreal Ecosystems Dale Vitt, Jagtar Bhatti, 2012-09-20
Boreal ecosystems contain one third of the world's forests and stored carbon but these regions are under increasing threat from both natural and anthropogenic disturbances Written by leaders from the forefront of private public and academic sectors Restoration and Reclamation of Boreal Ecosystems emphasises a broad conceptual approach to the specific application of empirical research into development planning restoration and modelling of these ecosystems The importance of this is highlighted at a time of global climate change as these ecosystems act as carbon sinks There is a focus on the

reclamation of exploited ecosystems from a holistic standpoint ranging from environmental and edaphic variables to the restoration of keystone flora Recent advances in quantification of ecosystem services such as habitat suitability and carbon storage modelling are also detailed The book contains case studies which address how both historical and novel assemblages can provide ecosystem stability under projected climatic and land use scenarios *Ecological Restoration Law* Afshin Akhtar-Khavari, Benjamin J. Richardson, 2019-01-25 Ecological restoration is as essential as sustainable development for the health of the biosphere Restoration however has been a low priority of most countries environmental laws which tend to focus narrowly on rehabilitation of small discrete sites rather than the more ambitious recovery of entire ecosystems and landscapes Through critical theoretical perspectives and topical case studies this book's diverse contributors explore a more ambitious agenda for ecological restoration law Not only do they investigate current laws and other governance mechanisms they also consider the philosophical and methodological bases for the law to take ecological restoration more seriously Through exploration of themes relating to time space geography semiotics social justice and scientific knowledge this book offers innovative and critical insights into ecological restoration law *Restoring Natural Capital* James Aronson, Suzanne J. Milton, James N. Blignaut, 2012-09-26 How can environmental degradation be stopped How can it be reversed And how can the damage already done be repaired The authors of this volume argue that a two pronged approach is needed reducing demand for ecosystem goods and services and better management of them coupled with an increase in supply through environmental restoration *Restoring Natural Capital* brings together economists and ecologists theoreticians practitioners policy makers and scientists from the developed and developing worlds to consider the costs and benefits of repairing ecosystem goods and services in natural and socioecological systems It examines the business and practice of restoring natural capital and seeks to establish common ground between economists and ecologists with respect to the restoration of degraded ecosystems and landscapes and the still broader task of restoring natural capital The book focuses on developing strategies that can achieve the best outcomes in the shortest amount of time as it considers conceptual and theoretical issues from both an economic and ecological perspective examines specific strategies to foster the restoration of natural capital and offers a synthesis and a vision of the way forward Nineteen case studies from around the world illustrate challenges and achievements in setting targets refining approaches to finding and implementing restoration projects and using restoration of natural capital as an economic opportunity Throughout contributors make the case that the restoration of natural capital requires close collaboration among scientists from across disciplines as well as local people and when successfully executed represents a practical realistic and essential tool for achieving lasting sustainable development *Contemporary Ecology Research in China* Wenhua Li, 2015-10-26 The Chinese government is increasingly focusing on ecological construction and has subscribed to a national Ecological Civilization Construction Ecological research and protection practice develop so fast and achieve a lot at the national agenda This book is a synthesis of five most exciting and dominant themes in contemporary

ecological research in China biodiversity ecosystem management degraded ecosystem restoration global change and sustainable development This book spans all the Earth's major ecosystems such as forests oceans grasslands wetlands lakes rivers farmland and cities This book provides a platform for scientific research across a variety of disciplines It will be invaluable to experts policymakers and local officers and will also be a highly useful resource for undergraduate and postgraduate students This book will allow researchers students and policymakers outside China to learn about the significant achievements and applications of ecological research within China *Handbook of Ecological and Ecosystem Engineering* Majeti Narasimha Vara Prasad, 2021-05-25 Learn from this integrated approach to the management and restoration of ecosystems edited by an international leader in the field The Handbook of Ecological and Ecosystem Engineering delivers a comprehensive overview of the latest research and practical developments in the rapidly evolving fields of ecological and ecosystem engineering Beginning with an introduction to the theory and practice of ecological engineering and ecosystem services the book addresses a wide variety of issues central to the restoration and remediation of ecological environments The book contains fulsome analyses of the restoration rehabilitation conservation sustainability reconstruction remediation and reclamation of ecosystems using ecological engineering techniques Case studies are used to highlight practical applications of the theory discussed within The material in the Handbook of Ecological and Ecosystem Engineering is particularly relevant at a time when the human population is dramatically rising and the exploitation of natural resources is putting increasing pressure on planetary ecosystems The book demonstrates how modern scientific ecology can contribute to the greening of the environment through the inclusion of concrete examples of successful applied management The book also includes A thorough discussion of ecological engineering and ecosystem services theory and practice An exploration of ecological and ecosystem engineering economic and environmental revitalization An examination of the role of soil meso and macrofauna indicators for restoration assessment success in a rehabilitated mine site A treatment of the mitigation of urban environmental issues by applying ecological and ecosystem engineering A discussion of soil fertility restoration theory and practice Perfect for academic researchers industry scientists and environmental engineers working in the fields of ecological engineering environmental science and biotechnology the Handbook of Ecological and Ecosystem Engineering also belongs on the bookshelves of environmental regulators and consultants policy makers and employees of non governmental organizations working on sustainable development Ecological Engineering Patrick Kangas, 2003-09-25 Less expensive and more environmentally appropriate than conventional engineering approaches constructed ecosystems are a promising technology for environmental problem solving Undergraduates graduate students and working professionals need an introductory text that details the biology and ecology of this rapidly developing discipline known as **Restoration of Boreal and Temperate Forests** John A. Stanturf, 2004-12-28 While the commitment to protect and restore forest ecosystems has become a policy goal in many countries since the Rio Conference there is still no general consensus on what

constitutes restoration This authoritative reference presents the best practices for fostering increased sustainability enhancing biodiversity and repairing ecosystem func

Yeah, reviewing a book **Restoration Ecology And Sustainable Development** could grow your close connections listings. This is just one of the solutions for you to be successful. As understood, execution does not suggest that you have extraordinary points.

Comprehending as with ease as harmony even more than extra will find the money for each success. bordering to, the proclamation as skillfully as acuteness of this Restoration Ecology And Sustainable Development can be taken as well as picked to act.
