Science in Culture Stephen R. Graubard, 2018-04-27 Twenty five years ago Gerald Holton's Thematic Origins of Scientific Thought introduced a wide audience to his ideas Holton argued that from ancient times to the modern period an astonishing feature of innovative scientific work was its ability to hold simultaneously deep and opposite commitments of the most fundamental sort Over the course of Holton's career he embraced both the humanities

and the sciences Given this background it is fitting that the explorations assembled in this volume reflect both individually and collectively Holton's dual roots In the opening essay Holton sums up his long engagement with Einstein and his thematic commitment to unity The next two essays address this concern In historicized form Lorraine Daston returns the question of the scientific imagination to the Enlightenment period when both sciences and art feared imagination Daston argues that the split whereby imagination was valued in the arts and loathed in the sciences is a nineteenth century divide James Ackerman on Leonardo da Vinci meshes perfectly with Daston's account showing a form of imaginative intervention where it is irrelevant to draw analogies between art and science Historians of religion Wendy Doniger and Gregory Spinner pursue the imagination into the bedroom with literary theological representations Science culture and the imagination also intersect with biologist Edward Wilson and physicist Steven Weinberg Both tackle the big question of the unity of knowledge and worldviews from a scientific perspective while art historian Ernst Gombrich does the same from the perspective of art history To emphasize the nitty gritty of scientific practice chemists Bretislav Fredrich and Dudley Herschbach provide a remarkable historical tour at the boundary of chemistry and physics In the concluding essay historian of education Patricia Albjerg Graham addresses pedagogy head on In these various reflections on science art literature philosophy and education this volume gives us a view in common a deep and abiding respect for Gerald Holton's contribution to our understanding of science in culture Peter Galison is Mallinckrodt Professor of History of Science and of physics at Harvard University Stephen R Graubard is editor of the American Academy of Arts and Sciences and its journal *Daedalus* and professor of history emeritus at Brown University Everett Mendelsohn is director of the History of Science Program at Harvard University

Rapprochement J.F. Kiley, 2012-12-06 Now how would things be intelligible if they did not proceed from an intelligence In the last analysis a Primal Intelligence must exist which is itself Intellection and Intelligibility in pure act and which is the first principle of intelligibility and essences of things and causes order to exist in them as well as an infinitely complex network of regular relationships whose fundamental mysterious unity our reason dreams of rediscovering in its own way Such an approach to God s existence is a variant of Thomas Aquinas fifth way Its impact was secretly present in Einstein s famous saying God does not play dice which no doubt used the word God in a merely figurative sense and meant only nature
