Research Frontiers in Bioinspired Energy National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Committee on Research Frontiers in Bioinspired Energy, 2012-02-28 In May 2007 the National Academies Chemical Sciences Roundtable held a public workshop on the topic of Bioinspired Chemistry for Energy where government academic and industry representatives discussed promising research

developments in solar generated fuels hydrogen processing enzymes artificial photosynthetic systems and biological based fuel cells Workshop participants identified the need for a follow up activity that would explore bioinspired energy processes in more depth and involve a wider array of disciplines as speakers and participants Particularly workshop participants stressed the importance of holding a workshop that would include more researchers from the biological sciences and engineering as well as those involved in technological advances that enable progress in understanding these systems Building upon the 2007 workshop the National Academies Board on Chemical Sciences and Technology convened the Committee on Research Frontiers in Bioinspired Energy to organize a second workshop in 2011 which according to the statement of task would explore the molecular level frontiers of energy processes in nature through an interactive multidisciplinary and public format Specifically the committee was charged to feature invited presentations and include discussion of key biological energy capture storage and transformation processes gaps in knowledge and barriers to transitioning the current state of knowledge into applications and underdeveloped research opportunities that might exist beyond disciplinary boundaries Research Frontiers in Bioinspired Energy is an account of what occurred at the 2011 workshop and does not attempt to present any consensus findings or recommendations of the workshop participants It summarizes the views expressed by workshop participants and while the committee is responsible for the overall quality and accuracy of the report as a record of what transpired at the workshop the views contained in the report are not necessarily those of the committee

Plant Biology and Biotechnology Bir Bahadur, Manchikatla Venkat Rajam, Leela Sahijram, K.V. Krishnamurthy, 2015-07-02 This volume offers a much needed compilation of essential reviews on diverse aspects of plant

biology written by eminent botanists. These reviews effectively cover a wide range of aspects of plant biology that have contemporary relevance. At the same time they integrate classical morphology with molecular biology, physiology with pattern formation, growth with genomics, development with morphogenesis and classical crop improvement techniques with modern breeding methodologies. Classical botany has been transformed into cutting edge plant biology, thus providing the theoretical basis for plant biotechnology. It goes without saying that biotechnology has emerged as a powerful discipline of Biology in the last three decades. Biotechnological tools, techniques and information used in combination with appropriate planning and execution have already contributed significantly to economic growth and development. It is estimated that in the next decade or two, products and processes made possible by biotechnology will account for over 60% of worldwide commerce and output. There is therefore a need to arrive at a general understanding and common approach to issues related to the nature, possession, conservation and use of biodiversity as it provides the raw material for biotechnology. More than 90% of the total requirements for the biotechnology industry are contributed by plants and microbes in terms of goods and services. There are, however, substantial plant and microbial resources that are waiting for biotechnological exploitation in the near future through effective bioprospection. In order to exploit plants and microbes for their useful products and processes, we need to first understand their basic structure, organization, growth and development, cellular process and overall biology. We also need to identify and develop strategies to improve the productivity of plants. In view of the above, in this two volume book on plant biology and biotechnology, the first volume is devoted to various aspects of plant biology and crop improvement. It includes 33 chapters contributed by 50 researchers, each of which is an expert in his/her own field of research. The book begins with an introductory chapter that gives a lucid account on the past, present and future of plant biology, thereby providing a perfect historical foundation for the chapters that follow. Four chapters are devoted to details on the structural and developmental aspects of the structures of plants and their principal organs. These chapters provide the molecular biological basis for the regulation of morphogenesis of the form of plants and their organs involving control at the cellular and tissue levels. Details on biodiversity, the basic raw material for biotechnology, are discussed in a separate chapter in which emphasis is placed on the genetic species and ecosystem diversities and their conservation. Since fungi and other microbes form an important component of the overall biodiversity, special attention is paid to the treatment of fungi and other microbes in this volume. Four chapters respectively deal with an overview of fungi, arbuscular mycorrhizae and their relation to the sustenance of plant wealth, diversity and practical applications of mushrooms and lichens associated with a photobiont. Microbial endosymbionts associated with plants and phosphate solubilizing microbes in the rhizosphere of plants are exhaustively treated in two separate chapters. The reproductive strategies of bryophytes and an overview on Cycads form the subject matter of another two chapters, thus fulfilling the need to deal with the non-flowering Embryophyte group of plants. Angiosperms, the most important group of plants from a biotechnological perspective, are examined exhaustively in this volume. The chapters on

angiosperms provide an overview and cover the genetic basis of flowers development pre and post fertilization reproductive growth and development seed biology and technology plant secondary metabolism photosynthesis and plant volatile chemicals A special effort has been made to include important topics on crop improvement in this volume The importance of pollination services apomixes male sterility induced mutations polyploidy and climate changes is discussed each in a separate chapter Microalgal nutra pharmaceuticals vegetable oil based nutraceuticals and the importance of alien crop resources and underutilized crops for food and nutritional security form the topics of three other chapters in this volume There is also a special chapter on the applications of remote sensing in the plant sciences which also provides information on biodiversity distribution The editors of this volume believe the wide range of basic topics on plant biology that have great relevance in biotechnology covered will be of great interest to students researchers and teachers of botany and plant biotechnology alike

An Astrobiology Strategy for the Exploration of Mars National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Division on Engineering and Physical Sciences, Space Studies Board, Committee on an Astrobiology Strategy for the Exploration of Mars, 2007-07-26 Three recent developments have greatly increased interest in the search for life on Mars The first is new information about the Martian environment including evidence of a watery past and the possibility of atmospheric methane The second is the possibility of microbial viability on Mars Finally the Vision for Space Exploration initiative included an explicit directive to search for the evidence of life on Mars These scientific and political developments led NASA to request the NRC's assistance in formulating an up to date integrated astrobiology strategy for Mars exploration Among other topics this report presents a review of current knowledge about possible life on Mars an astrobiological assessment of current Mars missions a review of Mars mission planetary protection and findings and recommendations The report notes that the greatest increase in understanding of Mars will come from the collection and return to Earth of a well chosen suite of Martian surface materials

Systematic Exploration of Indolizine-Based Small Fluorescent

Molecules Youngjun Lee, 2018-08-16 This thesis describes an in depth study of an indolizine based fluorophore from understanding of its structure photophysical property relationship to its application as a useful biological reporter Organic fluorophores have been extensively used in the field of molecular biology owing to their excellent photophysical property suitable cell permeability and synthetic flexibility Understanding of the structure photophysical property relationship of a given fluorophore often paves the road to the development of valuable molecular probes to visualize and transcribe biological networks In this thesis respective chapters deal with molecular design organic synthesis structure property analysis and quantum mechanical interpretation of unexplored family of indolizine based molecules This systematic exploration has led to rational development of a new microalgae lipid droplet probe colorful bioorthogonal fluorogenic probes and a bright mitochondrial probe working under live cell conditions Harnessing the optical properties of a given fluorophore has been an important topic for a couple of decades both in industry and in academia This thesis provides useful insights for the

improvement and development of unique small fluorescent materials or optical materials Strategic Considerations for Support of Humans in Space and Moon/Mars Exploration Missions NASA Advisory Council. these studies focusing specifically on how various modeling practices probe possibilities and justify claims concerning them. The volume is divided into three sections plus an introductory chapter. The introductory chapter provides a state of the art survey of the discussions of modeling possibilities within the philosophy of science as well as an introduction to the book's main themes and individual papers. The three sections focus on different kinds of possibility concepts: possibility spaces and how possibly modeling in practical situations. The chapters contained in this volume address conceptual and theoretical issues while also presenting case studies from various scientific domains: physics, evolutionary and synthetic biology, network science, climate science, economics, and epidemiology. Essential reading for philosophers of science, epistemologists, and modelers in various scientific disciplines. *Modeling the Possible* is also suitable for anyone interested in model-based scientific inferences, their validity, and the policy conclusions derived from them.
