Reducing the Cost of Spacecraft Ground Systems and Operations Jiun-Jih Miao, Richard Holdaway, 2013-03-14 Reducing the cost of space program interests people more and more nowadays due to the concerns of budget limitation and commercialization of space technology The Proceedings of the 3rd International Symposium on Reducing the Cost of Spacecraft Ground Systems and Operations bring together papers contributed by the authors representing the research organizations academic institutions and commercial sectors of 10 countries around the world The papers encompass the subject areas in mission planning and operation TT C systems mission control centers and mini and small satellite support highlighting the issues concerned by the researchers and engineers involved in a wide range of space programs and space industries Handbook of Space Engineering, Archaeology, and Heritage Ann Darrin, Beth L. O'Leary, 2009-06-26 Some might think that the 27 thousand tons of material launched by earthlings into outer space is nothing more than floating piles of debris However when looking at these artifacts through the eyes of historians and anthropologists instead of celestial pollution they are seen as links to human history and heritage Space The New Frontier for Ar Space Systems Technology and Operations Peter Tchoryk, 2003 Space Transportation Avionics Technology Symposium , 1990 **Scientific and Technical Aerospace Reports** , 1995 *NASA Authorization for Fiscal Year 1980* United States. USAF Scientific Advisory Board, 1996 The Role of Small Satellites in NASA and NOAA Earth Observation Programs National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Space Studies Board, Committee on Earth Studies, 2000-05-12 Remote observations of Earth from space serve an extraordinarily broad range of purposes resulting in extraordinary demands on those at the National Aeronautics and Space Administration NASA the National Oceanic and Atmospheric Administration NOAA and elsewhere who must decide how to

execute them In research Earth observations promise large volumes of data to a variety of disciplines with differing needs for measurement type simultaneity continuity and long term instrument stability Operational needs such as weather forecasting add a distinct set of requirements for continual and highly reliable monitoring of global conditions The Role of Small Satellites in NASA and NOAA Earth Observation Programs confronts these diverse requirements and assesses how they might be met by small satellites In the past the preferred architecture for most NASA and NOAA missions was a single large spacecraft platform containing a sophisticated suite of instruments But the recognition in other areas of space research that cost effectiveness flexibility and robustness may be enhanced by using small spacecraft has raised questions about this philosophy of Earth observation For example NASA has already abandoned its original plan for a follow on series of major platforms in its Earth Observing System This study finds that small spacecraft can play an important role in Earth observation programs providing to this field some of the expected benefits that are normally associated with such programs such as rapid development and lower individual mission cost It also identifies some of the programmatic and technical challenges associated with a mission composed of small spacecraft as well as reasons why more traditional larger platforms might still be preferred The reasonable conclusion is that a systems level examination is required to determine the optimum architecture for a given scientific and or operational objective The implied new challenge is for NASA and NOAA to find intra and interagency planning mechanisms that can achieve the most appropriate and cost effective balance among their various requirements
