

the constitutional position of the Hungarian nobility and the circumstances of the revocation of the Hungarian constitution in 1673. It is therefore rather unfortunate that no contemporary evidence of the Hungarian diet renouncing its 'right of resistance' under Leopold in 1687 has been included.

The documentation of development in north-eastern Germany under the Hohenzollern dynasty is equally fascinating. It invites the student to investigate the geopolitical conditions which led to the setting up of a military power-state, and it introduces him to the technical problems of state building in all their social, economic, constitutional and religious implications.

There are only minor shortcomings in this generally admirable book : (e.g. Philip II on p. 3, should read Phillip III; 1701 saw the coronation of the king of Prussia, not of Poland as suggested in the page headings of pp 275-91; 'Feingeist' on p. 214 should read either 'Schöngeist' or 'Freigeist'). The chronological and dynastic tables might fruitfully have been supplemented by maps. The only really negative aspect of this book is its prohibitive price.

CONSTITUTIONAL RELATIONS BETWEEN BRITAIN AND INDIA : THE TRANSFER OF POWER, 1942-7. Vol. i : The Cripps mission, January-April 1942. Edited by Nicholas Mansergh and E. W. R. Lumby. Pp lxxiii, 928. London : Stationery Office. 1970. £7.

THIS is the first volume of a new series of constitutional documents, released for publication even before the expiry of the recently adopted thirty-year limit. The terminal date of the series is fixed by the grant of independence on 15 August 1947. The editors had more difficulty in deciding when to begin. The date chosen—1 January 1942—is an appropriate start for a self-contained period of rapid change. It fell between the entry of Japan into the war, which quickly threatened the security of India, and the Cripps mission, which attempted to gain Indian cooperation for the immediate announcement of a post-war programme for attaining self-government, coupled with a nebulous invitation to Indians to participate in the meantime 'in the counsels of their country'.

The most imaginative part of the scheme was the selection of Stafford Cripps to discuss its terms with Indian leaders. Cripps, who had recently joined Churchill's coalition government, was on the left wing of the labour party and had long been on friendly terms with Nehru. His views on the Indian question were much more radical than those of Amery, the secretary of state, and Linlithgow, the viceroy, to say nothing of Churchill himself. The post-war part of the terms offered dominion status to an Indian union, but allowed individual provinces to opt out and negotiate separate settlements. The formula for the immediate future was not likely to satisfy the Indian demand for a responsible share in organising the defence of the country. Cripps tried to stretch his brief as far as he could, but he had no authority to promise responsible

Reflections On The Transfer Of Power J:

Multiple Diffraction of X-Rays in Crystals Shih-Lin In-Hang, 2012-12-06 The three dimensional arrangement of atoms and molecules in crystals and the comparable magnitude of x ray wavelengths and interatomic distances make it possible for crystals to have more than one set of atomic planes that satisfy Bragg's law and simultaneously diffract an incident x ray beam this is the so called multiple diffraction This type of diffraction should in principle reflect three dimensional information about the structure of the diffracting material Recent progress in understanding this diffraction phenomenon and in utilizing this diffraction technique in solid state and materials sciences reveals the diversity as well as the importance of multiple diffraction of x rays in application Unfortunately there has been no single book written that gives a systematic review of this type of diffraction encompasses its diverse applications and foresees future trends of development It is for this purpose that this book is designed It is hoped that its appearance may possibly turn more attention of condensed matter physicists chemists and material scientists toward this particular phenomenon and that new methods of non destructive analysis of matter using this diffraction technique may be developed in the future *X-Ray Multiple-Wave Diffraction* Shih-Lin Chang, 2013-04-17 X ray multiple wave diffraction sometimes called multiple diffraction or N beam diffraction results from the scattering of X rays from periodic two or higher dimensional structures like 2 d and 3 d crystals and even quasi crystals The interaction of the X rays with the periodic arrangement of atoms usually provides structural information about the scatterer Unlike the usual Bragg reflection the so called two wave diffraction the multiply diffracted intensities are sensitive to the phases of the structure factors involved This gives X ray multiple wave diffraction the chance to solve the X ray phase problem On the other hand the condition for generating an X ray multiple wave diffraction is much more strict than in two wave cases This makes X ray multiple wave diffraction a useful technique for precise measurements of crystal lattice constants and the wavelength of radiation sources Recent progress in the application of this particular diffraction technique to surfaces thin films and less ordered systems has demonstrated the diversity and practicability of the technique for structural research in condensed matter physics materials sciences crystallography and X ray optics The first book on this subject *Multiple Diffraction of X Rays in Crystals* was published in 1984 and intended to give a contemporary review on the fundamental and application aspects of this diffraction *Progress in Optics*, 1989-09-01 *Progress in Optics* is a well established series of volumes of review articles dealing with theoretical and applied optics and related subjects Widely acclaimed by numerous reviewers as representing an authoritative and up to date source of information in all branches of optics the series continues to fulfil a genuine need within the scientific community Articles are contributed by leading scientists including two Nobel Prize winners chosen by the Editor with the advice of an international panel of experts constituting the Editorial Advisory Board Many of the articles appearing in these volumes have since been established as basic references in their respective fields **Applied Mechanics Reviews**, 1966 **Raman Amplifiers for**

Telecommunications 1 Mohammad N. Islam, 2007-06-30 I remember vividly the first time that I heard about the erbium amplifier. At that time of course it was the erbium doped erbium amplifier the predecessor of the Raman amplifier that is the subject of this book. It was an early morning in a forgotten year in Murray Hill New Jersey at one of our Bell Labs monthly research staff meetings. About twenty directors and executive directors of research organizations clustered around a long table in the imposing executive conference room. Arno Penzias the vice president of research presided at the foot of the table. Everyone who participated in those research staff meetings will long remember their culture and atmosphere. Arno would pick an arbitrary starting point somewhere around the table and the designated person would head to the front of the table to give a short talk on something new in his or her research area. This first speaker would invariably fiddle helplessly with the controls embedded in the podium that controlled the viewgraph projector but eventually we would hear machinery grinding in the back room as a large hidden mirror moved into place. We would all wait quietly arranging and choosing our own viewgraphs from the piles that lay on the table in front of every participant. *Fiber Optic Design Considerations* IGIC, Inc. Staff, 1994

Laser Machining of Advanced Materials Narendra B Dahotre, Anoop Samant, 2011-03-11 Advanced materials are becoming increasingly important as substitutes for traditional materials and as facilitators for new and unique products. They have had a considerable impact on the development of a wide range of strategic technologies. Structural ceramics, biomaterials, composites, and intermetallics fall under this category of advanced materials. **Journal of Research of the National Bureau of Standards** United States. National Bureau of Standards, 1983 **Journal of Research of the National Bureau of Standards**, 1983 **Advanced Microwave RF Antennas and Circuits** Ofer Aluf, 2025-09-26 This book describes a new concept in analyzing RF Microwave circuits which includes RF Microwave antennas. The analysis is based on nonlinear dynamics and chaos models and shows comprehensive benefits and results. All conceptual RF microwave circuits and antennas are innovative and can be broadly implemented in engineering applications. The presentation fills the gap of analytical methods for microwave RF antennas and circuits analysis: concrete examples and geometric examples. The microwave RF antennas and circuits analysis is developed systematically starting with basic microwave RF circuits and antennas, differential equations and their bifurcations, followed by fixed points analysis, limit cycles, Basin of Attraction, BOA, and Stability. Stability switching. Additionally, the book discusses RFID Antennas, systems design and analysis, RF amplifiers, basic and advanced topics, design methods. This book is aimed at electrical and electronic engineers, RF and microwave engineers, students, and researchers in physics as well. It is aimed for research institutes in the area of high power Laser and Target chamber interaction which need to design and use Moebius loop antennas for detecting the created EMP. It is also aimed for research institutes in the areas RF Microwave, Magnetic Resonance, Imaging, MRI, Electron paramagnetic resonance, EPR, Nuclear magnetic resonance, NMR, or electron spin resonance, ESR spectroscopy, and Electromagnetism and gives good comprehensive in RF and Microwave systems. This second edition includes new chapters about Moebius loop magnetic

antennas and Magnetic Resonance Imaging MRI RF coils systems which both are analyzed and simulate for stability and stability switching This second edition includes a new appendix about Transmission lines and matching networks Antennas systems and Oscillation systems fundamental and main parameters Unique features of the book are its emphasis on practical and innovative microwave RF engineering applications These include microwave RF circuits and antennas in a variety topological structures RFID ICs and antennas microstrips circulators cylindrical RF network antennas Tunnel Diode TD bipolar transistors field effect transistors FETs IMPATT amplifiers Small Signal SS amplifiers Bias T circuits PIN diode circuits power amplifiers oscillators resonators filters N turn antennas dual spiral coils antennas Helix antennas linear dipole and slot array Moebius loop magnetic antennas Magnetic Resonance Imaging MRI RF coils systems and Hybrid trans linear circuit Many examples are presented in this book and it is also ideal for intermediate level courses at graduate level studies It is also ideal for engineer who has not had formal instruction in nonlinear dynamics but who now desires to fill the gap between innovative microwave RF circuits and antennas and advance mathematical analysis methods

A Rhetoric of Reflection Kathleen Yancey, 2016-08-15 Reflection in writing studies is now entering a third generation Dating from the 1970s the first generation of reflection focused on identifying and describing internal cognitive processes assumed to be part of composing The second generation operating in both classroom and assessment scenes in the 1990s developed mechanisms for externalizing reflection making it visible and thus explicitly available to help writers Now a third generation of work in reflection is emerging As mapped by the contributors to *A Rhetoric of Reflection* this iteration of research and practice is taking up new questions in new sites of activity and with new theories It comprises attention to transfer of writing knowledge and practice teaching and assessment portfolios linguistic and cultural difference and various media including print and digital It conceptualizes conversation as a primary reflective medium both inside and outside the classroom and for individuals and collectives and articulates the role that different genres play in hosting reflection Perhaps most important in the work of this third generation is the identification and

increasing appreciation of the epistemic value of reflection of its ability to help make new meanings and of its rhetorical power for both scholars and students Contributors Anne Beaufort Kara Taczak Liane Robertson Michael Neal Heather Ostman Cathy Leaker Bruce Horner Asao B Inoue Tyler Richmond J Elizabeth Clark Naomi Silver Christina Russell McDonald Pamela Flash Kevin Roozen Jeff Sommers Doug Hesse *Spectroscopic Membrane Probes* Leslie M. Loew, 2018-04-17 The optical spectra of molecular membrane probes can be interpreted terms of the structure dynamics and the physiological state of the membrane The general picture we have of membranes and of the properties of the proteins imbedded in them has arguably emerged directly from probe studies over the last 20 years This work is designed to make these techniques accessible to a broad audience of cell biologist The techniques discussed revolve primarily around the fluorescence of membrane probes but applications of light absorption and Raman scattering are included In addition to reviews of the major applications most chapters include information on required apparatus experimental design data analysis and potential pitfalls

Belyaev, Robin S. Langley, 2010-12-02 The Symposium was aimed at the theoretical and numerical problems involved in modelling the dynamic response of structures which have uncertain properties due to variability in the manufacturing and assembly process with automotive and aerospace structures forming prime examples It is well known that the difficulty in predicting the response statistics of such structures is immense due to the complexity of the structure the large number of variables which might be uncertain and the inevitable lack of data regarding the statistical distribution of these variables The Symposium participants presented the latest thinking in this very active research area and novel techniques were presented covering the full frequency spectrum of low mid and high frequency vibration problems It was demonstrated that for high frequency vibrations the response statistics can saturate and become independent of the detailed distribution of the uncertain system parameters A number of presentations exploited this physical behaviour by using and extending methods originally developed in both phenomenological thermodynamics and in

the fields of quantum mechanics and random matrix theory For low frequency vibrations a number of presentations focussed on parametric uncertainty modelling for example probabilistic models interval analysis and fuzzy descriptions and on methods of propagating this uncertainty through a large dynamic model in an efficient way At mid frequencies the problem is mixed and various hybrid schemes were proposed It is clear that a comprehensive solution to the problem of predicting the vibration response of uncertain structures across the whole frequency range requires expertise across a wide range of areas including probabilistic and non probabilistic methods interval and info gap analysis statistical energy analysis statistical thermodynamics random wave approaches and large scale computations and this IUTAM symposium presented a unique opportunity to bring together outstanding international experts in these fields **NBS Special Publication** ,1978
