Remote Sensing Of Snow And Ice

Mark F. Meier

Remote Sensing Of Snow And Ice:

Remote Sensing of Snow and Ice Mark F. Meier, 1979 Lists the methods in use for remote sensing of characteristics of snow and ice in seasonal snow cover glaciers and ice sheets ground ice lake and river ice and sea ice discusses methods for analysing such data *Remote Sensing of Snow and Ice* W. Gareth Rees, 2005-08-12 Many advances in spaceborne instrumentation remote sensing and data analysis have occurred in recent years but until now there has been no book that reflects these advances while delivering a uniform treatment of the remote sensing of frozen regions *Remote Sensing of Snow and Ice* identifies unifying themes and ideas in these fields and presents them in a single volume This book provides a comprehensive introduction to the remote sensing of the Earth's cryosphere Explaining why cryospheric observations are important and why remote sensing observations are essential it offers thorough surveys of the physical properties of ice and snow and of current and emerging remote sensing techniques Presenting a technical review of how the properties of snow and ice relate to remote sensing observations the book focuses on principles by which useful geophysical information becomes encoded into the electromagnetic radiation detected during the remote sensing process The author then discusses in detail the application of remote sensing methods to snow freshwater ice glaciers and icebergs The book concludes with a summary that examines what remote sensing has revealed about the cryosphere where major technical problems still exist and how these problems can be addressed Prospects and concerns for satellite remote sensing of snow and ice National Research Board Ad Hoc Panel on Remote Sensing of Snow and Ice, National Research Council Ad Hoc Panel on Remote Sensing of Snow and Ice Committee on Glaciology Polar Research Board Commission on Physical Sciences, Mathematics, and Resources, 1989 Remote Sensing of Ice and Snow Dorothy Hall, 2012-12-06 Remote sensing using aircraft and satellites has helped to open up to intensified scientific scrutiny the cold and remote regions in which snow and ice are prevalent In this book the utility of remote sensing for identifying mapping and analyzing surface and subsurface properties of worldwide ice and snow features is described Emphasis is placed on the use of remote sensing for developing an improved understanding of the physical properties of ice and snow and understanding the interrelationships of cryospheric processes with atmospheric hydrospheric and oceanic processes Current and potential applications of remotely sensed data are also stressed At present all weather day and night observations of the polar regions can be obtained from sensors operating in different portions of the electromagnetic spectrum Because the approaches for analysis of remotely sensed data are not straightforward Chapter 1 serves to introduce the reader to some of the optical thermal and electrical properties of ice and snow as they pertain to remote sensing In Chapter 2 we briefly describe many of the sensors and platforms that are referred to in the rest of the book The remaining chapters deal with remote sensing of the seasonal snow cover lake and river ice permafrost glacier ice and sea ice **REMOTE SENSING OF SNOW AND ICE** Moira Steyn-Ross, 1984 Remote Sensing of Snow and Ice Albert Rango, 1979 *Prospects and Concerns for Satellite Remote Sensing of Snow and Ice*

T. Hallikainen,HELSINKI UNIV OF TECHNOLOGY ESPOO (Finland) RADIO LAB.,1982 Nimbus 7 SMMR data at 18 GHz and 37 GHz are applied to studies of snow covered sea ice and snow covered terrain in Finland First the dielectric properties of sea ice snow and frozen soils are reviewed Brightness temperatures are calculated using the radiative transfer model The theoretical results show that snow covered sea ice and snow covered terrain are practically identical systems The only major difference is the presence of vegetation in the case of terrain Using horizontally polarized satellite data in five test areas of mixed surface types in Finland slopes of the change of TB 18 GHz TB 37 GHz vs water equivalent of dry snow are derived for pure surface types of forests boglands farm lands and lakes A new algorithm to mapping the water equivalent of dry snow is suggested The theoretical model is used to interpret the satellite data on snow covered sea ice *Optical Remote Sensing of Snow on Sea Ice* Xiaobing Zhou,2002

Remote Sensing in Snow Hydrology Klaus Seidel,Jaroslav Martinec,2004-04-07 The authors of this monograph initially provide an assessment of the role of snow and ice in the global water balance and methods of snow measurements are detailed Periodical satellite snow cover mapping enabling the regional distribution of snow and water equivalent is evaluated enhancing runoff forecasts Advanced Concepts and Techniques in the Study of Snow and Ice Resources H.
