

The background of the book cover is a photograph of a mining operation. A large, dark-colored mining truck is driving away from the viewer on a dusty dirt road. The truck is kicking up a cloud of dust. In the background, there are large, hazy mountains under a cloudy sky. The overall tone is industrial and somewhat somber.

investment disputes Traditional studies on actors in international investment law have tended to concentrate on arbitrators claimant investors and respondent states Yet this focus on the principal players in investment dispute settlement has allowed a number of other seminal actors to be neglected This book seeks to redress this imbalance by turning the spotlight on the latter From the investor s home state to domestic courts from sub national governments to international organisations and from political risk insurance agencies to legal defence teams in national ministries the book critically reviews these overlooked public actors in international investment law

Sustainable Minerals Operations in the Developing World Geological Society of London, 2005 The sustainable development of minerals which are non renewable resources is a major challenge in today's world In this regard the true definition of sustainability is a debating point in itself can such a concept exist with respect to non renewable resources Perhaps the ideal sustainability model is one that minimizes negative environmental impact and maximizes benefits to society the economy and regional national development Developed and near developed economies rely for commodity supplies on developing countries where major mining operations are often a mainstay of the domestic economy Limited environmental regulation and low wages lead to charges of exploitation Also large numbers of people have no alternative to living by informal often dangerous artisanal mining This Special Publication gives examples from developing countries from all scales of mineral extraction The volume reviews environmental economic health and social problems and highlights the need to solve these before sustainability can be achieved The better solutions require mutual understanding through full involvement of all stakeholders education training and investment so that small scale and

artisanal mines can grow into well managed operations At larger scales most major international mining companies have now improved their practices and are monitoring their progress although there is no room for complacency in this rapidly changing area

Large-scale Mines and Local-level Politics Colin Filer, Pierre-Yves Le Meur, 2017-10-20 Despite the difference in their populations and political status New Caledonia and Papua New Guinea have comparable levels of economic dependence on the extraction and export of mineral resources For this reason the costs and benefits of large scale mining projects for indigenous communities has been a major political issue in both jurisdictions and one that has come to be negotiated through multiple channels at different levels of political organisation The resource

boom that took place in the early years of the current century has only served to intensify the political contests and conflicts that surround the distribution of social economic and environmental costs and benefits between community members and other stakeholders in the large scale mining industry. However the mutual isolation of Anglophone and Francophone scholars has formed a barrier to systematic comparison of the relationship between large scale mines and local level politics in Papua New Guinea and New Caledonia despite their geographical proximity. This collection of essays represents an effort to overcome this barrier but is also intended as a major contribution to the growth of academic and political debate about the social impact of the large scale mining industry in Melanesia and beyond.

ExtrACTION Kirk Jalbert, Anna Willow, David Casagrande, Stephanie Paladino, 2017-06-26. This timely volume examines resistance to natural resource extraction from a critical ethnographic perspective. Using a range of case studies from North Central and South America, Australia and Central Asia, the contributors explore how and why resistance movements seek to change extraction policies, evaluating their similarities, differences, successes and failures. A range of ongoing debates concerning environmental justice, risk and disaster, sacrifice zones and the economic cycles of boom and bust are considered, and the roles of governments, free markets and civil society groups re-examined. Incorporating contributions from authors in the fields of anthropology, public policy, environmental health and community based advocacy, ExtrACTION offers a robustly argued case for change. It will make engaging reading for academics and students in the fields of critical anthropology, public policy and politics as well as activists and other interested citizens.
