Low Dimensional Topology Proc:

    Low Dimensional Topology Hanna Nencka,1999 The book has two main parts The first is devoted to the Poincare conjecture characterizations of PL manifolds covering quadratic forms of links and to categories in low dimensional topology that appear in connection with conformal and quantum field theory   **Topics in low-dimensional topology : in honor of Steve Armentrout : proceedings of the Conference on Low-Dimensional Topology** Augustin Banyaga,1999   **Recent Advances in Group Theory and Low-dimensional Topology** Jens L. Mennicke,Jung Rae Cho,2003   **Topics In Low Dimensional Topology: In Honor Of Steve Armentrout - Proceedings Of The Conference On Low-dimensional Topology** Augustin Banyaga,H Movahedi-lankarani,Robert Wells,1999-10-15 Recent success with the four dimensional Poincar conjecture has revived interest in low dimensional topology especially the three dimensional Poincar conjecture and other aspects of the problems of classifying three dimensional manifolds These problems have a driving force and have generated a great body of research as well as insight The main topics treated in this book include a paper by V Poenaru on the Poincar conjecture and its ramifications giving an insight into the herculean work of the author on the subject Steve Armentrout s paper on Bing s dogbone space belongs to the topics in three dimensional topology motivated by the Poincar conjecture S Singh gives a nice synthesis of Armentrout s work Also included in the volume are shorter original papers dealing with somewhat different aspects of geometry and dedicated to Armentrout by his colleagues Augustin Banyaga and Jean Pierre Ezin David Hurtubise Hossein Movahedi Lankarani and Robert Wells   *Low-Dimensional Topology* R. Brown,T. L. Thickstun,1982-05-20 This volume consists of the proceedings of a conference held at the University College of North Wales Bangor in July of 1979 It assembles research papers which reflect diverse currents in low dimensional topology The topology of 3 manifolds hyperbolic geometry and knot theory emerge as major themes The inclusion of surveys of work in these areas should make the book very useful to students as well as researchers   *Global Differential Geometry* Christian Bär,Joachim Lohkamp,Matthias Schwarz,2011-12-18 This volume contains a collection of well written surveys provided by experts in Global Differential Geometry to give an overview over recent developments in Riemannian Geometry Geometric Analysis and Symplectic Geometry The papers are written for graduate students and researchers with a general interest in geometry who want to get acquainted with the current trends in these central fields of modern mathematics   ,   **Spaces of Homotopy Self-Equivalences - A Survey** John W. Rutter,2006-11-14 This survey covers groups of homotopy self equivalence classes of topological spaces and the homotopy type of spaces of homotopy self equivalences For manifolds the full group of equivalences and the mapping class group are compared as are the corresponding spaces Included are methods of calculation numerous calculations finite generation results Whitehead torsion and other areas Some 330 references are given The book assumes familiarity with cell complexes homology and homotopy Graduate students and established researchers can use it for learning for reference and to determine the current state of knowledge   *Physics And*

articles Topics include a stratification of a moduli space of abelian varieties in positive characteristic and the calculation of the classes of the strata tautological classes for moduli of abelian varieties as well as for moduli of curves correspondences between moduli spaces of curves locally symmetric families of curves and jaco bians and the role of symmetric product spaces in quantum field theory string theory and matrix theory This Intercity Seminar is part of the long term project Algebraic curves and Riemann surfaces geometry arithmetic and applications sponsored hy the Netherlands Organization for Scientific Research NWO that has been running since 1994 Its ancestry can be traced back to joint activities in the seventies if not earlier which as of 1980 had evolved into active biweekly research seminars These have been a focal point of Dutch algebraic geometry and singularity theory since We are grateful to NWO for its support for the project C F thanks the Max Planck Institut fur Mathematik Bonn for support during the final stages of the preparation of this volume **Geometric Folding Algorithms** Erik D. Demaine,Joseph O'Rourke,2007-07-16 Did you know that any straight line drawing on paper can be folded so that the complete drawing can be cut out with one straight scissors cut That there is a planar linkage that can trace out any algebraic curve or even sign your name Or that a Latin cross unfolding of a cube can be refolded to 23 different convex polyhedra Over the past decade there has been a surge of interest in such problems with applications ranging from robotics to protein folding With an emphasis on algorithmic or computational aspects this treatment gives hundreds of results and over 60 unsolved open problems to inspire further research The authors cover one dimensional 1D objects linkages 2D objects paper and 3D objects polyhedra Aimed at advanced undergraduate and graduate students in mathematics or computer science this lavishly illustrated book will fascinate a broad audience from school students to researchers *Quantum Invariants of Knots and 3-Manifolds* Vladimir G. Turaev,2016-07-11 Due to the strong appeal and wide use of this monograph it is now available in its third revised edition The monograph gives a systematic treatment of 3 dimensional topological quantum field theories TQFTs based on the work of the author with N Reshetikhin and O Viro This subject was inspired by the discovery of the Jones polynomial of knots and the Witten Chern Simons field theory On the algebraic side the study of 3 dimensional TQFTs has been influenced by the theory of braided categories and the theory of quantum groups The book is divided into three parts Part I presents a construction of 3 dimensional TQFTs and 2 dimensional modular functors from so called modular categories This gives a vast class of knot invariants and 3 manifold invariants as well as a class of linear representations of the mapping class groups of surfaces In Part II the technique of 6j symbols is used to define state sum invariants of 3 manifolds Their relation to the TQFTs constructed in Part I is established via the theory of shadows Part III provides constructions of modular categories based on quantum groups and skein modules of tangles in the 3 space This fundamental contribution to topological quantum field theory is accessible to graduate students in mathematics and physics with knowledge of basic algebra and topology It is an indispensable source for everyone who wishes to enter the forefront of this fascinating area at the borderline of mathematics and physics Contents Invariants of
