## **Low temperature Physics:**

Low-Temperature Physics Christian Enss, Siegfried Hunklinger, 2005-12-05 Science is often a journey to the limits of the feasible and ascertainable In low temperature physics this journey strives towards absolute zero When Louis Cailletet on December 2nd 1877 realized a major step in terms of the production of low temperatures namely the first liquefaction of oxygen he could hardly imagine the wealth of exciting physical phenomena that would be discovered in this field Despite the anticipation from everyday experience which generally equates cold with discomfort and stifling condensed matter at low temperatures reveals a wide array of fascinating properties As the most prominent examples let us mention superfluidity and superconductivity whose attraction is undiminished since their discovery With every step towards lower temperatures numerous new insights have resulted which make the traditional subject of low temperature physics an attractive and modern research topic The present book is based on material from lectures that both authors have given several times at the universities of Heidelberg Bayreuth and Konstanz It is focused on the discussion of physical phenomena that become most apparent at low temperatures The book is mainly aimed at students and provides a compact and comprehensible introduction to various topics of low temperature physics Selection and emphasis of the material is subjective and certainly reflects our personal preferences However we have tried to give room for as wide a spectrum of topics as possible The contents are organized in three parts entitled quantum fluids solids at low temperatures and principles of refrigeration and thermometry

Low Temperature Physics-LT 13 K.D. Timmerhaus, 2013-04-17 The 13th International Conference on Low Temperature Physics organized by the National Bureau of Standards Los Alamos Scientific Laboratory and the University of Colorado was held in Boulder Colorado August 21 to 25 1972 and was sponsored by the National Science Foundation the U S Army Office of Scientific Research the U S Atomic Energy Commission the U S Navy Office of Naval Research the International Institute of Refrigeration and the International Union of Pure and Applied Physics This international conference was the latest in a series of biennial conferences on low temperature physics the first of which was held at the Massachusetts Institute of Technology in 1949 For a complete list of previous LT conferences see p viii Many of these past conferences have been coordinated and sponsored by the Commission on Very Low Temperatures of IUPAP Subsequent LT conferences will be scheduled triennially beginning in 1975 LT 13 was attended by approximately 1015 participants from twenty five countries Eighteen plenary lectures and 550 contributed papers were presented at the Conference The Conference began with brief introductory and welcoming remarks by Dr R H Kropschot on behalf of the Organizing Committee Professor J Bardeen on behalf of the Commission on Very Low Temperatures of the IUPAP and Professor O V Lounasmaa on behalf of the International Institute of Refrigeration The eighth London Award was then presented by Professor E Low Temperature Physics, 1993

at low temperatures and to do so at a level accessible to researchers new to the field and to graduate and senior undergraduate students. Rapid scientific progress made over the last seven years in a number of specific areas for example high  $T_c$  superconductivity and the quantum Hall effect has inevitably rendered our earlier *Matter at Low Temperatures* somewhat out of date. We have therefore taken the opportunity to revise and amend the text in its entirety and at the same time to furnish it with what we believe to be a more apt title emphasizing that it is with the physics of low temperatures that we are particularly concerned. Like its predecessor *Low Temperature Physics* is devoted to the fascinating and diverse phenomena that occur under conditions of extreme cold many of which have no analogue at all in the everyday world at room temperature. *Low Temperature Physics; Proceedings International Conference on Low Temperature Physics, 1977*

International Conference on Low Temperature Physics**, 1968 **High-Pressure and Low-Temperature Physics** J.A. Woollam, C.W. Chu, 2012-12-06 High pressure science is a rapidly growing diverse field. The high pressure technique has become a powerful tool for both the study and preparation of materials. In spite of the many high pressure conferences held in recent years I felt that there was a need for scientists within a well defined area not bound merely by the common experimental technique to meet in an atmosphere conducive to frank exchange and close interaction. In this spirit the Cleveland State University hosted such a conference from July 20 to 22 1977 in which the physics of solids under high pressures and at low temperatures was specifically examined. Both the original and review papers presented at the conference and the candid discussions following their presentations appear in this volume. They clearly cover a rather complete spectrum of current research in the physics of solids at high pressures and low temperatures. I wish to thank the National Aeronautics and Space Administration the Office of Naval Research and the National Science Foundation for their financial support of the conference. In addition I wish especially to thank Steinar Huang for his unceasing assistance in arranging this conference. I also wish to thank him and Francis Stephenson for their assistance in preparing this book.
