1 Introduction

Let \mathcal{Q}^n be a subset of \mathcal{K}^n , the set of convex bodies in \mathbb{R}^n , and let \mathcal{A} be an abelian semigroup. A function $\Phi: \mathcal{Q}^n \rightarrow \mathcal{A}$ is called a *valuation* if

$$\Phi(K \cup L) + \Phi(K \cap L) = \Phi(K) + \Phi(L) \quad (1.1)$$

for all $K, L \in \mathcal{Q}^n$ with $K \cup L, K \cap L \in \mathcal{Q}^n$. Valuations on convex bodies are a classical concept going back to Dehn's solution in 1900 of Hilbert's Third Problem. Probably the most famous result on valuations is Hadwiger's classification theorem of continuous rigid motion invariant valuations [19]. For detailed information and a historical account on valuations on convex bodies, see [10, 21, 45]. See also [1–3, 11–17, 20, 23–32, 41, 42] for some of the for more recent contributions.

Let K be a compact starshaped subset in \mathbb{R}^n . Its Minkowski functional $\|\cdot\|_K$ is defined by

L^p Harmonic Analysis on $SL(2, \mathbb{R})$ William H. Barker, 1988 The central result of this paper is a characterization of the image of C^∞ G under the operator valued Fourier transform The main thread through the paper is a careful analysis of the matrix coefficients for the discrete series and principal series of representations of $SL(2, \mathbb{R})$ The paper is long very technical and is not for the faint hearted

The Bellman Function Technique in Harmonic Analysis Vasily Vasyunin, Alexander Volberg, 2020-08-06 The Bellman function a powerful tool originating in control theory can be used successfully in a large class of difficult harmonic analysis problems and has produced some notable results over the last thirty years This book by two leading experts is the first devoted to the Bellman function method and its applications to various topics in probability and harmonic analysis Beginning with basic concepts the theory is introduced step by step starting with many examples of gradually increasing sophistication culminating with Calder n Zygmund operators and endpoint estimates All necessary techniques are explained in generality making this book accessible to readers without specialized training in non linear PDEs or stochastic optimal control Graduate students and researchers in harmonic analysis PDEs functional analysis and probability will find this to be an incisive reference and can use it as the basis of a graduate course

Geometric Harmonic Analysis V Dorina Mitrea, Irina Mitrea, Marius Mitrea, 2023-08-22 This monograph presents a comprehensive self contained and novel approach to the Divergence Theorem through five progressive volumes Its ultimate aim is to develop tools in Real and Harmonic Analysis of geometric measure theoretic flavor capable of treating a broad spectrum of boundary value problems formulated in rather general geometric and analytic settings The text is intended for researchers graduate students and industry professionals interested in applications of harmonic analysis and geometric measure theory to complex analysis scattering and partial differential equations The ultimate goal in Volume V is to prove well posedness and Fredholm solvability results

concerning boundary value problems for elliptic second order homogeneous constant complex coefficient systems and domains of a rather general geometric nature The formulation of the boundary value problems treated here is optimal from a multitude of points of view having to do with geometry functional analysis through the consideration of a large variety of scales of function spaces topology and partial differential equations

Lie Theory and Its Applications in Physics Vladimir Dobrev, 2025-02-27 This volume presents modern trends in the area of symmetries and their applications based on contributions to the workshop Lie Theory and Its Applications in Physics held in Sofia Bulgaria in June 2023 Traditionally Lie theory is a tool to build mathematical models for physical systems Recently the trend is towards geometrization of the mathematical description of physical systems and objects A geometric approach to a system yields in general some notion of symmetry which is very helpful in understanding its structure Geometrization and symmetries are meant in their widest sense i e representation theory algebraic geometry number theory infinite dimensional Lie algebras and groups superalgebras and supergroups groups and quantum groups noncommutative geometry symmetries of linear and nonlinear partial differential operators special functions and others Furthermore the necessary tools from functional analysis are included This is a large interdisciplinary and interrelated field The topics covered in this volume from the workshop represent the most modern trends in the field Representation Theory Symmetries in String Theories Symmetries in Gravity Theories Supergravity Conformal Field Theory Integrable Systems Polylogarithms and Supersymmetry They also include Supersymmetric Calogero type models Quantum Groups Deformations Quantum Computing and Deep Learning Entanglement Applications to Quantum Theory and Exceptional Quantum Algebra for the standard model of particle physics This book is suitable for a broad audience of mathematicians mathematical physicists and theoretical physicists including researchers and graduate students interested in Lie Theory

Symplectic Methods in Harmonic Analysis and in Mathematical Physics Maurice A. de Gosson, 2011-07-30 The aim of this book is to give a rigorous and complete treatment of various topics from harmonic analysis with a strong emphasis on symplectic invariance properties which are often ignored or underestimated in the time frequency literature The topics that are addressed include but are not limited to the theory of the Wigner transform the uncertainty principle from the point of view of symplectic topology Weyl calculus and its symplectic covariance Shubin's global theory of pseudo differential operators and Feichtinger's theory of modulation spaces Several applications to time frequency analysis and quantum mechanics are given many of them concurrent with ongoing research For instance a non standard pseudo differential calculus on phase space where the main role is played by Bopp operators also called Landau operators in the literature is introduced and studied This calculus is closely related to both the Landau problem and to the deformation quantization theory of Flato and Sternheimer of which it gives a simple pseudo differential formulation where Feichtinger's modulation spaces are key actors This book is primarily directed towards students or researchers in harmonic analysis in the broad sense and towards mathematical physicists working in quantum mechanics It

can also be read with profit by researchers in time frequency analysis providing a valuable complement to the existing literature on the topic A certain familiarity with Fourier analysis in the broad sense and introductory functional analysis e g the elementary theory of distributions is assumed Otherwise the book is largely self contained and includes an extensive list of references Notices of the American Mathematical Society American Mathematical Society,1988 **Euclidean**

This monograph records progress in approximation theory and harmonic analysis on balls and spheres and presents contemporary material that will be useful to analysts in this area. While the first part of the book contains mainstream material on the subject, the second and the third parts deal with more specialized topics such as analysis in weight spaces with reflection invariant weight functions and analysis on balls and simplexes. The last part of the book features several applications including cubature formulas, distribution of points on the sphere and the reconstruction algorithm in computerized tomography. This book is directed at researchers and advanced graduate students in analysis. Mathematicians who are familiar with Fourier analysis and harmonic analysis will understand many of the concepts that appear in this manuscript: spherical harmonics, the Hardy-Littlewood maximal function, the Marcinkiewicz multiplier theorem, the Riesz transform and doubling weights are all familiar tools to researchers in this area.
