## **Machine Tool Design:**

*Design Of Machine Tools*, 5/E Basu, 2008 Very few books are available today which can give a comprehensive method of designing machine tool elements Based on his long experience the author has developed a comprehensive textbook which will meet the requirement of a student stepping into the field of machine tool design The book is designed primarily to meet the requirements of a Mechanical and Production Engineering students of Indian universities at the undergraduate as well as postgraduate levels Contents Introduction Determination of the Forces Acting on the Tool in Certain Machining Operations and Horse power Requirement Kinematics of Machine Tools Further Studies of Kinematics Stepless Regulation in Machine Tools Machine Tool Guides Design of Beds Tables and Columns Design of Power Screws of Machine Tools Spindle Units in Machine Tools Lubrication and Rigidity in Machine Tools Controlling Systems in a Machine Tool Electrical Equipments in Machine Tools Hydraulic Control Systems in Machine Tools Programme Control in Machine Tools Built in inspection Units in Machine Tools Vibration in Machine Tools Microdisplacements in Machine Tools New Concepts in Machine Tools Design Industrial Robots and Their Applications NC CNC DNC machines Robot Languages State of the Art Flexible Manufacturing System FMS Dynamic Analysis of a few Subsystem in Machine Tools Non uniform Microdisplacement Reliability Analysis of Some Machine Tool Elements A Questions B Answers References Index

**Design Principles of Metal-Cutting Machine Tools** F. Koenigsberger, 2013-09-11 Design Principles of Metal Cutting Machine Tools discusses the fundamentals aspects of machine tool design The book covers the design consideration of metal cutting machine such as static and dynamic stiffness operational speeds gearboxes manual and automatic control The text first details the data calculation and the general requirements of the machine tool Next the book discusses the design principles which include stiffness and rigidity of the separate constructional elements and their combined behavior under load as well as electrical mechanical and hydraulic drives for the operational movements The next section deals with automatic control including its principles constructional elements and applications The last section tackles the design of constructional elements such as machine tool structures spindles and spindle bearings and control and operating devices The book will be of great use to mechanical and manufacturing engineers Individuals involved in materials manufacturing industry will also benefit from the book

Ignatyev,N. Acherkan,Yu Mikheyev,2000 This is volume 4 of a fundamental four volume work translated from the considerably revised second edition It should be of great value to engineers engaged in the design manufacture and maintenance of machine tool equipment It can also be used to advantage by the students of engineering institutes majoring in Process Engineering Metal Cutting Machine Tools or Cutting Tool Design The first volume deals with the basic machine

tools and special machine tools used in cutting tool production The classification type and size range and designation of machine tools employed in Soviet practice are given in detail together with the types of motion found in machine tools Metal cutting lathes turret lathes vertical boring machines automatic and semiautomatic lathes milling machines and many other types of machine tools are described Special attention has been given to machine tools designed for the production of cutting tools These include general and single purpose semiautomatic precision thread grinding machines automatic and semiautomatic tracer controlled lathes with hydraulic controls jig boring machines and specialized machine tools as well as automatic transfer machines for cutting tool production Volume two contains Parts Three and Four Part Three deals with the kinematics of machine tools This branch of machine tool design has been strictly systematized by the author and is set forth with exceptional clarity The kinematic structures of a great many different types of machine tools including the most complex gear cutting machines are analyzed by methods developed in the text which take into consideration the interrelation between the workpiece to be produced in the given machine tool Part Four takes up hydraulic drives of machine tools It contains all the theoretical and practical data required in the application of fluid power and control systems to machine tools Volume Three contains Part Five and this deals with machine tool design proper It is a comprehensive scientific treatment of the subject and is a revised and complemented version of a previous Russian edition which has become a reliable reference book for all Soviet machine tool engineers and has been translated into French Such questions as performance criteria basic design data principal specifications and the development of the kinematic scheme of a new machine tool are dealt with in great detail Design recommendations are given as well as the necessary calculation data for the basic elements of machine tools speed and feed gearboxes stepless drives rapid traverse mechanisms spindles and spindle bearings mechanisms for rectilinear motion small displacement and periodic motion reversing devices beds columns tables and other housing type components slideways and antifriction ways The fourth and final volume covers Automatic Machine Tools and Transfer Machines and Machine Tool Testing and Research Parts Six and Seven of the complete work Part Six deals with the fundamental principles of machine tool automation the various systems of numerical programmed control that have found extensive application in modern machine tool design in the USSR and other countries Much space has been given to automatic transfer machines including in line rotary and other types their layout features design procedures structure and output Current methods of testing and investigating the geometrical kinematic dynamic and operational characteristics of machine tools are considered in Part Seven Methods of testing the quality characteristics of determining the corresponding criteria indices and of using contemporary apparatus for this purpose are dealt with
