Michie, 1991-03-07 The twelfth volume of this well known series of review volumes in artificial intelligence covers a wide range of subjects discussed at the workshop held in Tallinn Estonia in October 1987 **Machine Intelligence 15** Koichi Furukawa, Kōichi Furukawa, Donald Michie, Stephen Muggleton, 1999 Following on from previous volumes in the series Machine Intelligence 15 provides an overview of current areas of interest in artificial intelligence **Inductive Logic Programming** Fabrizio Riguzzi, Elena Bellodi, Riccardo Zese, 2018-08-24 This book constitutes the refereed conference proceedings of the 28th International Conference on Inductive Logic Programming ILP 2018 held in Ferrara Italy in September 2018 The 10 full papers presented were carefully reviewed and selected from numerous submissions Inductive Logic Programming ILP is a subfield of machine learning which originally relied on logic programming as a uniform representation language for expressing examples background knowledge and hypotheses Due to its strong representation formalism based on first order logic ILP provides an excellent means for multi relational learning and data mining and more generally for learning from structured data **Machine Intelligence** Jean E. applications are attaining prominence is in its design to learn continuously from real world use and experience and its capability to improve its performance. It is no wonder that the applications of AI span from complex high technology equipment manufacturing to personalized exclusive recommendations to end users. Many deployments of AI software given its continuous learning need require computation platforms that are resource intense and have sustained connectivity and perpetual power through central electrical grid. In order to harvest the benefits of AI revolution to all of humanity traditional AI software development paradigms must be upgraded to function effectively in environments that have resource constraints: small form factor computational devices with limited power, devices with intermittent or no connectivity and/or powered by non-perpetual source or battery power. The aim of this book is to prepare current and future software engineering teams with the skills and tools to fully utilize AI capabilities in resource constrained devices. The book introduces essential AI concepts from the perspectives of full scale software development with emphasis on creating niche Blue Ocean small form factored computational environment products.

Subject Guide to Books in Print, 1997 [Human and Machine Thinking](#) Philip N. Johnson-Laird, 2013-11-05. This book aims to reach an understanding of how the mind carries out three sorts of thinking: deduction, induction, and creation; to consider what goes right and what goes wrong; and to explore computational models of these sorts of thinking. Written for students of the mind, psychologists, computer scientists, philosophers, linguists, and other cognitive scientists, it also provides general readers with a self-contained account of human and machine thinking. The author presents his point of view rather than a review as simply as possible so that no technical background is required. Like the field of research itself, it calls for hard thinking about thinking.
