Methodologies and Approaches** Rasiah Logananthara,Günther Palm,Moonis Ali,2003-07-31 The focus of the papers presented in these proceedings is on employing various methodologies and approaches for solving real life problems Although the mechanisms that the human brain employs to solve problems are not yet completely known we do have good insight into the functional processing performed by the human mind On the basis of the understanding of these natural processes scientists in the field of applied intelligence have developed multiple types of artificial processes and have employed them successfully in solving real life problems The types of approaches used to solve problems are dependant on both the nature of the problem and the expected outcome While knowledge based systems are useful for solving problems in well understood domains with relatively stable environments the approach may fail when the domain knowledge is either not very well understood or changing rapidly The techniques of data discovery through data mining will help to alleviate some problems faced by knowledge based approaches to solving problems in such domains Research and development in the area of artificial intelligence are influenced by opportunity needs and the availability of resources The rapid advancement of Internet technology and the trend of increasing bandwidths provide an opportunity and a need for intelligent information processing thus creating an excellent opportunity for agent based computations and learning Over 40% of the papers appearing in the conference proceedings focus on the area of machine learning and intelligent agents clear evidence of growing interest in this area *Advances in Intelligent Data Analysis* David J Hand,Joost N. domain Arising from the EU MUSCLE network a program that drew together multidisciplinary teams with expertise in machine learning pattern recognition artificial intelligence and image video text and crossmedia processing the book first introduces the machine learning principles and techniques that are applied in multimedia data processing and analysis The second part focuses on multimedia data processing applications with chapters examining specific machine learning issues in domains such as image retrieval biometrics semantic labelling mobile devices and mining in text and music This book will be suitable for practitioners researchers and students engaged with machine learning in multimedia applications

Scalability Issues in Authorship Attribution Kim Luyckx,2011-08 Provides an in depth and systematic study of the so called scalability issues in authorship attribution the task that aims to identify the author of a text given a model of authorial style based on texts of known authorship Computational authorship attribution does not rely on in depth reading but rather automates the process This book investigates the behavior of a text categorization approach to the task when confronted with scalability issues By addressing the issues of experimental design data size and author set size the dissertation demonstrates whether the approach taken is valid in experiments with limited or sufficient data and with small or large sets of authors
