Making Connections Communication Through The Ages:

Making Connections Charles T. Meadow, 2002-02-11 Meadow takes us on a Cook's tour of communication technologies across time—the alphabet and moveable type printing cave drawings and carrier pigeons telephones television and of course the Internet In each case Meadow shows how these and other devices are connected to each other even as they serve to make connections between people Part One discusses the basics of communications while Part Two delves into telecommunications before the days of steam and electricity Part Three offers insight into steam electricity and internal combustion energy and how they revolutionized society Communication is the key to a productive world For those dazzled by the pace of change in the technology or McLuhan's unorthodox but brilliant insights Meadow's casual style and pace provide the perfect antidote

The Early Information Society Alistair Black, Dave Muddiman, 2016-03-23 Whether termed the network society the knowledge society or the information society it is widely accepted that a new age has dawned unveiled by powerful computer and communication technologies Yet for millennia humans have been recording knowledge and culture engaging in the dissemination and preservation of information In *The Early Information Society* the authors argue for an earlier incarnation of the information age focusing upon the period 1900-1960 In support of this they examine the history and traditions in Britain of two separate but related information rich occupations information management and information science repositioning their origins before the age of the computer and identifying the forces driving their early development *The Early Information Society* offers an historical account which questions the novelty of the current information society It will be essential reading for students researchers and practitioners in the library and information science field and for sociologists and historians interested in the information society
