New Directions in AI Planning Malik Ghallab, Alfredo Milani, 1996 KI 2008: Advances in Artificial Intelligence Andreas Dengel, Karsten Berns, Thomas M. Breuel, Frank Bomarius, Thomas R. Roth-Berghofer, 2008-09-16

KI 2008 was the 31st Annual German Conference on Artificial Intelligence held September 23-26 at the University of Kaiserslautern and the German Research Center for Artificial Intelligence DFKI GmbH in Kaiserslautern Germany. The conference series started in 1975 with the German Workshop on AI (GWAi) which took place in Bonn and represents the first forum of its type for the German AI Community. Over the years AI has become a major field in computer science in Germany involving a number of successful projects that received much international attention. Today KI conferences are international forums where participants from academia and industry from all over the world meet to exchange their recent research results and to discuss trends in the field. Since 1993 the meeting has been called the Annual German Conference on Artificial Intelligence designated by the German acronym KI. This volume contains the papers selected out of 77 submissions including a number of submissions from outside German speaking countries. In total 15 submissions (19%) were accepted for oral and 30 (39%) for poster presentation. Oral presentations at the conference were in a single track. Because of this the choice of presentation form (oral or poster) was based on how well reviews indicated that the paper would fit into one or the other format. The proceedings allocate the same space to both types of papers. In addition we selected six papers that show high application potential describing systems or prototypical implementations of innovative AI technologies. They are also included in this volume as two-page extended abstracts.

New Frontiers in Computational Intelligence and Its Applications Masoud Mohammadian, 2000

Computational Intelligence is a broad and active research area that is growing rapidly due to the many successful applications of these new techniques in very diverse problems. Many industries have benefited from adopting this technology. The increased number of patents and diverse range of products developed using computational intelligence methods is evidence of this fact. The goal of this book is to provide highlights of the current research in computational intelligence area. The book consists of research papers in the fields of neural networks, fuzzy logic, evolutionary computing, hybrid evolutionary computing, fuzzy logic systems, hybrid neural networks, evolutionary computing and fuzzy logic systems, image processing and vision, advances in robotics control and manufacturing and rough sets.

KI 2006 Christian Freksa, Michael Kohlhase, Kerstin Schill, 2007-08-21

This book constitutes the thoroughly refereed post-proceedings of the 29th Annual German Conference on Artificial Intelligence KI 2006 held in Bremen, Germany, in June 2006. This was co-located with RoboCup 2006, the innovative robot soccer world championship, and with ACTUATOR 2006, the 10th International Conference on New Actuators. The 29 revised full papers presented together with two invited contributions were carefully reviewed and selected from 112 submissions.

Understanding Planning Tasks Malte Helmert, 2008-01-24

This monograph is a revised version of Malte Helmert's doctoral thesis *Solving Planning Tasks in Theory and Practice* written under the supervision of Professor Bernhard

Nebel at Albert Ludwigs Universität Freiburg Germany in 2006 The book contains an exhaustive analysis of the computational complexity of the benchmark problems that have been used in the past decade Not only that but it also provides an in depth analysis of so called routing and transportation problems Information Modelling and Knowledge Bases XI Eiji Kawaguchi,Hannu Kangassalo,H. Jaakkola,2000 This is the tenth volume in a series on information modelling and knowledge bases The topics of the articles cover a wide variety of themes in the domain of information modelling design and specification of information systems and knowledge bases ranging from foundations and theories to systems construction and application studies The contributions in this volume represent the following major themes models in intelligent activity concept modelling and conceptual modelling conceptual modelling and information requirements specification collections of concepts knowledge base design and database design human computer interaction and modelling software engineering and modelling and applications Information Modelling and Knowledge Bases X Hannu Jaakkola,H. Kangassalo,Eiji Kawaguchi,1999 LISTENING TO MUSIC is designed to help develop and refine the listening skills of your students and inspire a lifelong appreciation of music Author and award winning scholar teacher Craig Wright who has taught Music Appreciation courses for more than 35 years is consistently praised by reviewers and other professors for his unparalleled accuracy and his clear direct conversational style Throughout the book Wright connects with today's students by incorporating comparisons between pop and classical music and by using examples from popular artists to illustrate core concepts This chronological text succinctly covers traditional Western music from medieval to modern discussing examples from each historical period within their social contexts and the construction of each piece Later chapters cover popular music its impact on musical globalization and comparisons between Western and non Western music LISTENING TO MUSIC is the only text that provides Craig Wright's own Listening Exercises in the book and online which help students focus on important musical elements and episodes A free CD packaged with each printed copy of the text includes all of the musical examples for the Part 1 listening exercises A full set of optional online student resources includes Active Listening Guides streaming music an interactive eBook quizzing and more all to challenge your students All of the music discussed in the text is also available on CD and on Sony Music download cards Available with InfoTrac Student Collections <http://go.cengage.com/infotrac> **Artificial Intelligence in Education** Ben Du Boulay,R. Mizoguchi,1997 The theme of this book is Knowledge and Media in Learning Systems and papers that explore the emerging roles of intelligent multimedia and distributed technologies as well as computer supported collaboration within that theme are included The spread of topics is very wide encompassing both well established areas such as student modelling as well as more novel topics such as distributed intelligent tutoring on the World Wide Web Far from undermining the need to understand how learning and teaching interact the newer media continue to emphasise the interdependence of these two processes Collaboration and tools for collaboration are the major topics of interest Understanding how human learners collaborate how peer tutoring works and how the

computer can play a useful role as either a more able or even a less able learning partner are all explored here

Information Modelling and Knowledge Bases VIII H. Kangassalo, 1997 Information modelling is the essential part of information systems design. Design methods, specification languages and tools tend to become application dependent, aiming at integration of methodologies stretching from traditional database design to knowledge bases and including use of logical languages and process oriented reactive systems description. The topics of the articles cover a wide variety of problems in the area of information modelling, information systems specification and knowledge bases ranging from foundations and theories to systems construction and application studies. The contributions are grouped into the following major categories: Systems specification and information modelling schemes; User interfaces and multimedia; Knowledge organization database structuring; Formal systems; Knowledge and information; From conceptual modelling to software engineering; Description and organization of concepts and objects; Learning systems and applications. This book is the eighth volume in the sub series Information Modelling and Knowledge Bases. This dates back to 1990 with annual publications now amounting to more than 200 reviewed articles. The current volume is intended for researchers, students and practitioners in the area of information systems.

Formal Ontology in Information Systems Nicola Guarino, 1998 Research on ontology is becoming increasingly widespread in the computer science community. While this term has been rather confined to the philosophical sphere in the past, it is now gaining a specific role in areas such as Artificial Intelligence, Computational Linguistics and Databases. Its importance has been recognized in fields as diverse as knowledge engineering, knowledge representation, qualitative modeling, language engineering, database design, information integration, object oriented analysis, information retrieval and extraction, knowledge management and organization, agent based systems design. Current applications areas are disparate, including enterprise integration, natural language translation, medicine, mechanical engineering, electronic commerce, geographic information systems, legal information systems and biological information systems. Various workshops addressing the engineering aspects of ontology have been held in the recent years. However, ontology by its very nature ought to be a unifying discipline. Insights in this field have potential impact on the whole area of information systems, taking this term in its broadest sense, as testified by the interest recently shown by international standards organizations. In order to provide a solid general foundation for this work, it is therefore important to focus on the common scientific principles and open problems arising from current tools, methodologies and applications of ontology.

Designing Cooperative Systems Rose Dieng, 2000 The main assumption behind the COOP conferences is that cooperative systems design requires a deep understanding of the cooperative work of dyads, groups and organizations involving both artefacts and social conventions. The key topic of COOP 2000 was *The Use of Theories and Models in Designing Cooperative Systems*. Two opposite methodological approaches to cooperative system design can be clearly identified: a pragmatic approach or an approach based on theories and models. Objectives of the COOP 2000 Conference included clarifying the reasons why one needs or does not need to use a theory or a

model for design comparing the pragmatic and the theory model based approaches and identifying possible joint points between them discussing the relevance of the theories models with respect to the design of co operative systems to better delimit the respective application fields of the various theories models and to identify their possible joint points

Advances in Intelligent Systems Francesco Carlo Morabito,1997 Intelligent Systems can be defined as systems whose design mainly based on computational techniques is supported in some parts by operations and processing skills inspired by human reasoning and behaviour Intelligent Systems must typically operate in a scenario in which non linearities are the rule and not as a disturbing effect to be corrected Finally Intelligent Systems also have to incorporate advanced sensory technology in order to simplify man machine interactions Several algorithms are currently the ordinary tools of Intelligent Systems This book contains a selection of contributions regarding Intelligent Systems by experts in diverse fields Topics discussed in the book are Applications of Intelligent Systems in Modelling and Prediction of Environmental Changes Cellular Neural Networks for NonLinear Filtering NNs for Signal Processing Image Processing Transportation Intelligent Systems Intelligent Techniques in Power Electronics Applications in Medicine and Surgery Hardware Implementation and Learning of NNs *Teaching and Learning in a Network World* Peter Hoffman,Denise Lemke,2000 The theme of TechEd2000 was Teaching and Learning in a Network World The conference brings together professionals from all sectors and levels of education and provides a vision of the exciting interactive technology rich future of education TechEd2000 plays a vital role in equipping universities colleges and schools with a strong base technology awareness and the knowledge needed to tackle the increasing challenges of teaching and learning Presentations accepted for TechEd2000 demonstrate innovative solutions for key technology issues faced by educational institutions from throughout the world **Information Modelling and**

Intelligent Agents An agent is a hardware or software system that is autonomous interactive with and reactive to its environment and other agents An agent can also be pro active in taking the initiative in goal directed behaviour Intelligent Agents are one of the most important and exciting areas of research and development in computer science today

Knowledge-based Software Engineering Pavol Návrát,Haruki Ueno,1998 This text collects contributions from different countries to a wide range of topics in software engineering Special emphasis is given to application of knowledge base methods to software engineering problems The papers tackle such areas as architecture of software and design patterns

Model-based Reasoning about Learner Behaviour Kees de Koning,1997 Simulators are becoming standard equipment for interactive learning environments They allow for attractive teaching with a large degree of freedom for the learner However without proper guidance the learner easily gets lost in a simulation environment Providing guidance requires an image of what the learner is doing Acquiring this image by diagnosing the behaviour of the learner is a complex and resource intensive task for which yet no general approach exists In this book we apply existing ideas and techniques from the field of model based reasoning and diagnosis to interactive learning environments We present a framework for subject matter modelling and diagnosis of learner behaviour The framework defines generic techniques for automatically generating subject matter models from qualitative simulations A generic model based engine employs these models for diagnosing the learner s behaviour The framework provides a powerful and reusable approach to individualising guidance in educational systems
