in Nuclei Hide Sakai, Hiroyuki Okamura, Tomotsugu Wakasa, 1998 This volume focuses on the development of spin giant resonances in nuclei Topics covered include quenching phenomena in Gamow Teller giant resonances spin dipole giant resonances spin longitudinal and transverse responses in quasi elastic scattering microscopic structures isoscalar spin responses and spin excitations in exotic nuclei as well *Giant Resonances* P.F. Bortigan, A. Bracco, R.A. Brogila, 2023-05-31

The series of volumes *Contemporary Concepts in Physics* is addressed to the professional physicist and to the serious graduate student of physics The subject of many body systems constitutes a central chapter in the study of quantum mechanics with applications ranging from elementary particle and condensed matter physics to the behaviour of compact stellar objects Quantal size effects is one of the most fascinating facets of many body physics this is testified to by the developments taking place in the study of metallic clusters fullerenes nanophase materials and atomic nuclei This book is divided into two main parts the study of giant resonances based on the atomic nucleus ground state zero temperature and the study of the γ decay of giant resonances from compound finite temperature nuclei **Giant Resonances**, 1996 *New*

Giant Resonances in Nuclei. An Interim Review, 1973 The recent identification of a giant quadrupole resonance just below the giant dipole has led to considerable interest in resonances higher than the dipole Some theoretical background is given first the effects of shell structure on the spectrum for 1 hole and 1 particle 1 hole states sum rules effective charges selection rules and the distribution of excitation strength and the interaction model for inelastic scattering are considered The experimental evidence from electron and hadron inelastic scattering is then presented and the paper ends with a discussion of indirect evidence of giant resonances 20 figures 1 table 6 references RWR **New Giant Resonances in Nuclei** George

Giant Resonances in Closed-shell Nuclei with Realistic Nuclear Forces Bruce Richard Barrett, 1967 **Giant resonances in hot nuclei** G. F. Bertsch, R. A. (Niels Bohr Institutet) Broglia, 1986 *Giant resonances in deformed and rotating nuclei* Sven Åberg, 1985 Giant Resonances in Heavy Deformed Nuclei Charles Byron Kohr, 1967 Spin Excitations in Nuclei Fred Petrovich, 1984-06 This volume contains the proceedings of the International Conference on Spin Excitations in Nuclei held in Telluride Colorado March 25-27 1982 The motivation for the conference was in a large part due to the recent development of new variable energy accelerators which produce high quality beams of electrons protons and pions that are providing the first precise information on spin excitations in nuclei over a large range of spin and mass In the past such data had been restricted primarily to light nuclei and were generally resolution limited Perhaps the most exciting new result has been the clear observation of the elusive spin dipole strength Gamow Teller and M1 in medium and heavy mass nuclei through the use of the p, n and p, p reactions at or near zero degrees with 100-200 MeV incident protons Energy dependence in the isovector parts of the nucleon-nucleon interaction make the 100-200 MeV energy region particularly appropriate for such studies The clean data from e, e , IT, IT, p, p and p, n on high spin stretched states which have particularly simple structure has also been quite important The recent results contain important new information on the nature of the spin dependent forces in nuclei These in turn are inherently related to the properties of the nuclear mesonic field and the underlying quantum chromodynamics

Giant Resonances, 1989 A review of some recent developments in the field of giant multipole resonances is presented Particular emphasis is placed on directions that the authors feel will be followed in this field during the next several years In particular the use of high energy heavy ions to excite the giant resonances is shown to provide exciting new capabilities for giant resonance studies Among subjects covered are Coulomb excitation of giant resonances photon decay of giant resonances the recent controversy over the identity of the giant monopole resonance the most recent value for incompressibility of nuclear matter from analysis of giant monopole data the isospin character of the $63 A$ $\sup - 1.3$ GQR agreement between e, e' and hadron-hadron prime excitation of the giant quadrupole resonance prospects for multiphonon giant resonance observation and isolation of the isovector giant quadrupole resonance 55 refs 23 figs 4 tabs
