He also explores the condition of rarity in the context of our changing world and climate why do plants become rare what threats do they face and what opportunities do we have to protect them before it is too late. The book concludes with an overview of different conservation techniques Using test cases such as Lady's Slipper Orchid and Starved Wood sedge Peter asks at what point does careful management becomes gardening And how far are we are justified in intervening in the life of a wild species Illustrated with around 300 colour images by some of Britain's best plant photographers as well as boxed texts telling the fascinating stories of several key species this is above all a celebration of rare plants and why they matter
