confirm the fragile interaction among states in the region and their susceptibility to external forces Gulf Security in the Twenty First Century brings together some of the foremost area experts to explore the most pressing issues including military threats to the region obstacles to economic development and socioeconomic harmonization and challenges to political stability In particular the work examines Iran s often enigmatic foreign policy vis vis its Gulf neighbors Iraq s resurgent military threat choices and constraints confronting US Middle East policy and Europe s inability to identify and pursue a united policy to safeguard its economic interests in the area These topics are further illuminated with an analysis of Russia s historical attempt at balancing foreign policy objectives in the Gulf with its enduring interests in Central Asia The potentially explosive issues of religious radicalism and the challenges of democratic pluralism are discussed in an effort to ascertain the potential of political Islam to disturb or enhance regional security Similarly the problems inhibiting the settlement of territorial disputes in and around the Gulf are brought into focus to illustrate lingering historical tensions among neighboring states To round out the book s topical coverage several contributors shed light on the region s unfettered dependence on foreign labor growing demographic pressures associated social and economic transformations and challenges to responsive public policy

Solar Revolution Travis Bradford, 2008-09-26 An innovative analysis that shows how the shift to solar energy in particular the use of photovoltaic cells is both economically advantageous and inevitable and will rival the information and communication technologies revolution in its transformative effects In *Solar Revolution* fund manager and former corporate buyout specialist Travis Bradford argues on the basis of standard business and economic forecasting models that over the next two decades solar energy will increasingly become the best and cheapest choice for most electricity and energy applications *Solar Revolution* outlines the path by which the transition to solar technology and sustainable energy practices will occur Developments in the photovoltaic PV industry over the last ten years have made direct electricity generation from PV cells a cost effective and feasible energy solution despite the common view that PV technology appeals only to a premium niche market Bradford shows that PV electricity today has become the choice of hundreds of thousands of mainstream homeowners and businesses in many markets worldwide including Japan Germany and the American Southwest Solar energy will eventually be the cheapest source of energy in nearly all markets and locations because PV can bypass the aging and fragile electricity grid and deliver its power directly to the end user fundamentally changing the underlying economics of energy As the scale of PV production increases and costs continue to decline at historic rates demand for PV electricity will outpace supply of systems for years to come Ultimately the shift from fossil fuels to solar energy will take place not because solar energy is better for the environment or energy security or because of future government subsidies or as yet undeveloped technology The solar revolution is already occurring through decisions made by self interested energy users The shift to solar energy is inevitable and will be as transformative as the last century s revolutions in information and communication technologies

The History of Petroleum Exploration on Barbados,

1865-1985 Sylvan Spooner, 2024-10-28 This book documents the history of the Barbadian petroleum industry and the effort of that island's black nationalist political elite to take control of the island's petroleum resources. In a direct challenge to the white Barbadian planter class, this group made it known that it wished to wrest from them ownership of the colony's petroleum rights. Stating that it would do so for the national good rather than for the good of the few who for centuries held power within the colony, the island's political leadership gave notice of its desire to disrupt the colonial order. The politically charged appropriation of this natural resource, which one member of the House of Lords called an unhealthy manifestation of self-expression, was a brazen and defiant stand against colonialism and imperialism filled with political risk for the island. This book documents petroleum exploration on Barbados from the mid-nineteenth century to 1985 and examines the island's careful cultivation of political and foreign policy relationships as well as the machinations involved as the island strove to take control of its petroleum industry.

Gulf Security in the Twenty-First Century David E. Long, Christian Koch, 1998-08-27 The connection between regional instability and the preservation of global security is nowhere more sensitive than in the Gulf. Events since the 1990-1991 Gulf War continue to confirm the fragile interaction among states in the region and their susceptibility to external forces. *Gulf Security in the Twenty-First Century* brings together some of the foremost area experts to explore the most pressing issues, including military threats to the region, obstacles to economic development and socioeconomic harmonization, and challenges to political stability. In particular, the work examines Iran's often enigmatic foreign policy vis-à-vis its Gulf neighbors, Iraq's resurgent military threat, choices and constraints confronting US Middle East policy, and Europe's inability to identify and pursue a united policy to safeguard its economic interests in the area. These topics are further illuminated with an analysis of Russia's historical attempt at balancing foreign policy objectives in the Gulf with its enduring interests in Central Asia. The potentially explosive issues of religious radicalism and the challenges of democratic pluralism are discussed in an effort to ascertain the potential of political Islam to disturb or enhance regional security. Similarly, the problems inhibiting the settlement of territorial disputes in and around the Gulf are brought into focus to illustrate lingering historical tensions among neighboring states. To round out the book's topical coverage, several contributors shed light on the region's unfettered dependence on foreign labor, growing demographic pressures, associated social and economic transformations, and challenges to responsive public policy.

Strategic Positioning in the Oil Industry Paul Stevens, 1998-10-08 This volume presents papers drawn from ECSSR's Second Annual Energy Conference entitled *Strategic Positioning in the Oil Industry: Trends and Options*, held in Abu Dhabi, October 26-27, 1996. The work highlights and investigates the changes which are occurring in the demand structure for oil, changes that will have far-reaching consequences for oil producers, refiners, and distributors who wish to perform in an ever-competitive market. Written principally by leading practitioners, the essays represent the most current thinking on how and in which direction the oil industry, particularly in the Gulf region, is developing. Readers will find trenchant analyses of vertical integration as a strategy

for oil security refining and petroleum product specifications in Asia privatization initiatives in the Gulf's energy sectors downstream integration of national oil companies and options and opportunities for Gulf oil companies in the Asian market Strategic Positioning in the Oil Industry Trends and Options is not only a valuable collection of information and argument but it also offers a rare insight into the beliefs and perceptions of those participating in today's international oil industry [New at the Energy Library](#) Energy Library,1991

Redeemer Nation Orrin Schwab,2004 In this book Dr Orrin Schwab develops the concept of the modern technocratic state as part of a global technocratic culture and civilization The author argues that technocratic cultural and institutional forms were and are part of a collective script for Western culture The American script combined the scientific commercial and technological aspects of the Enlightenment with the radical 17th century Protestant belief in America as a new Zion In the twentieth century the synthesis of mission along with global technocratic knowledge and institutions created the Wilsonian liberal technocratic order As the principal agent and protector of the modern capitalist international system America the self defined Redeemer Nation has moved through the controlled anarchy of international relations from one war and crisis to the next confirmed in its self defined role and mission
