Towards Gender Equity in Mathematics Education Gila Hanna, 2006-04-11

THE REAL WORLD OF MATHEMATICS SCIENCE AND TECHNOLOGY EDUCATION In this Preface I would like to focus on what I mean by education and speak about the models and metaphors that are used when people talk write and act in the domain of education We need to look at the assumptions and processes that the models and metaphors implicitly and explicitly contain I feel we should explore whether there is a specific thrust to mathematics education in the here and now and be very practical about it For me education is the enhancement of knowledge and understanding and there is a strong and unbreakable link between the two There seems little point in acquiring knowledge without understanding its meaning Nor is it enough to gain a deep understanding of problems without gaining the appropriate knowledge to work for their solution Thus knowledge and understanding are each necessary conditions for the process of education but only when they are linked will the process bear fruit Only in the balanced interplay of knowledge and understanding can we expect to achieve genuine education

Art, Education and Gender Gill Hopper, 2015-10-05 Why do girls study art and why do girls become primary teachers This book examines and reveals the powerful influence of the family the school and the state in shaping female identity and constructing notions of gender appropriateness It also discusses the status of art at school and the position of women artists in society

GCE Advanced Level, Advanced Supplementary Pure Mathematics Anthony Nicolaides, 2001

Promoting Equality in Secondary Schools David Hill, Mike Cole, 1999-01-12 This text looks at each national curriculum subject and analyzes it in terms of culture and ideology represented It proceeds to give detailed advice and suggestions on how to promote equality and equal opportunities within each subject Each chapter is wide ranging and includes both theoretical and practical issues The book also provides detailed lists of relevant curricular resources and their suppliers

Mathematics for Life and Work A Comparative Perspective on Mathematics to Inform Upper Secondary Reform in England OECD, 2024-11-05 Engagement and performance in mathematics at the upper secondary level have been the concern of successive governments in England This report was commissioned as part of the country's policy reflections for transforming how maths is viewed and experienced in England The report explores outcomes such as the share of students studying maths and performance across countries and how education systems internationally deliver mathematics in upper secondary It also examines factors shaping maths education including the expectations set by curricula student pathways cultural perceptions and the needs of the labour market and higher education

Masculinities In Mathematics Mendick, Heather, 2006-06-01 We desperately need more people with good mathematical qualifications to fill many posts in numerate occupations yet the numbers choosing to continue studying mathematics have fallen over the last 10 years This book is important as it investigates how mathematics is aligned with masculinity and hence is not attractive to a significant part of the population It is also challenging scholarly and a thoroughly good read It reports the results of carefully designed research on gender and choice and includes some fascinating individual case studies It should make us all reflect on what we are doing and how we can repair the damage Margaret Brown Professor of Mathematical Education King's College

London The book speaks to me as one of those texts that will become seminal in mathematics education It is original refreshing and despite a complicated plot points to some ways forward It is engagingly written if at times perhaps a little bit no nonsense in tone It will be of interest to teachers and teacher educators as well as providing a theoretical stance that should inform future research British Educational Research Journal The study of mathematics together with other gendered subjects such as science and engineering usually attracts more male than female pupils particularly at more advanced levels In this book Heather Mendick explores this phenomenon addressing the important question of why more boys than girls choose to study mathematics She combines new research with an original theoretical approach to argue that doing mathematics is doing masculinity The book illuminates what studying mathematics means for both students and teachers and offers a broad range of insights into students views and practices In addition to the words of young people learning mathematics the masculinity of mathematics is explored through historical material and cinematic representations Heather Mendick discusses the ways in which the alignment of mathematics with masculinity creates tensions for girls and women doing the subject These tensions are sensitively explored through interviews with young men and women to show how doing mathematics fits or conflicts with their gender identities Finally the book explores the implications for teachers including ways to promote gender equity in mathematics education This is key reading for students on courses in gender and education mathematics education gender and curriculum and social justice

The Minimum Core for Numeracy: Audit and Test Mark Patmore, Sarah Woodhouse, 2009-07-29 This book supports trainee teachers in the Lifelong Learning Sector in the assessment of their numeracy knowledge A self audit section is included to help trainees understand their level of competence and confidence in numeracy and will help them identify any gaps in their knowledge and skills This is followed by exercises and activities to support and enhance learning The book covers all the content of the LLUK standards for the minimum core for numeracy Coverage and assessment of the minimum core have to be embedded in all Certificate and Diploma courses leading to QTLS and ATLS status

Assessment at 16 Keith Selkirk, 2020-05-04 What students are deemed to have achieved when they are sixteen is the measure of how successful or otherwise their progress through the system of compulsory education has been And yet despite the importance of the process there has been no clear consensus about how best to assess students at sixteen The various formal examinations which have been tried have now largely been superseded by the GCSE a common system of examining at sixteen Originally published in 1988 the book discusses the development of this system its application to the main subject areas of the curriculum and some of its innovative aspects from both a theoretical and a practical standpoint In addition it also looks at the broader aspects of assessment of pupils at the age of sixteen and how we can give a more rounded indication of their achievements and abilities by the use of profiles and records of achievement

New Scientist, 1996

Revise for Edexcel GCSE Mathematics Keith Pledger, David Kent, 2002 Intending to help students revise the key topics they need to brush up on this work includes test yourself diagnostic questions worked

examples practice questions and summaries on important topics and practice examination papers *People of Few Words - Volume 2 - Fifty More Writers from the Writers' Showcase of the Short Humour Site* Swan Morrison, 2010-03-06 People of Few Words Volume 2 is the second collection of work by contributors to the Short Humour Site from across the world It contains one piece of 500 word Short Humour by each of fifty writers together with a brief biography of each writer

Rationing Education David Gillborn, Deborah Youdell, 1999-12-16 This research should make us extremely sceptical that the constant search for higher standards and for ever increasing achievement scores can do much more than put in place seemingly neutral devices for restratification Michael W Apple John Bascom Professor of Curriculum and Instruction and Educational Policy Studies University of Wisconsin Madison Recent educational reforms have raised standards of achievement but have also resulted in growing inequalities based on race and social class School by school league tables play a central role in the reforms These have created an A to C economy where schools and teachers are judged on the proportion of students attaining five or more grades at levels A to C To satisfy these demands schools are embracing new and ever more selective attempts to identify ability Their assumptions and practices embody a new IQism a simple narrow and regressive ideology of intelligence that labels working class and minority students as likely failures and justifies rationing provision to support those often white middle class boys already marked for success This book reports detailed research in two secondary schools showing the real costs of reform in terms of the pressures on teachers and the rationing of educational opportunity It will be important reading for any teacher researcher or policymaker with an interest in equality in education *Debates in Mathematics Education* Dawn Leslie, Heather Mendick, 2013-10-01 Debates in Mathematics Education explores the major issues that mathematics teachers encounter in their daily lives It engages with established and contemporary debates promotes and supports critical reflection and aims to stimulate both novice and experienced teachers to reach informed judgements and argue their point of view with deeper theoretical knowledge and understanding Written by experts in the field of mathematics education it investigates and offers fresh insight into topics of central importance including Gender social inequality and mathematics Mathematics politics and climate change The history and culture of mathematics Using popular culture in the mathematics classroom The concept of ability and its impact on learning What we mean by teaching for understanding Choosing and using examples in teaching The fitness of formal examinations Designed to stimulate discussion and support you in your own research writing and practice Debates in Mathematics Education will be a valuable resource for any student or practising teacher engaged in initial teacher training continuing professional development or Masters level study It also has much to offer to those leading initial teacher education programmes and to beginning doctoral students looking for a survey of the field of mathematics education research
