Krishnamurthy, 2015-07-02 This volume offers a much needed compilation of essential reviews on diverse aspects of plant biology written by eminent botanists These reviews effectively cover a wide range of aspects of plant biology that have contemporary relevance At the same time they integrate classical morphology with molecular biology physiology with pattern formation growth with genomics development with morphogenesis and classical crop improvement techniques with modern breeding methodologies Classical botany has been transformed into cutting edge plant biology thus providing the theoretical basis for plant biotechnology It goes without saying that biotechnology has emerged as a powerful discipline of Biology in the last three decades Biotechnological tools techniques and information used in combination with appropriate planning and execution have already contributed significantly to economic growth and development It is estimated that in the next decade or two products and processes made possible by biotechnology will account for over 60% of worldwide commerce and output There is therefore a need to arrive at a general understanding and common approach to issues related to the nature possession conservation and use of biodiversity as it provides the raw material for biotechnology More than 90% of the total requirements for the biotechnology industry are contributed by plants and microbes in terms of goods and services There are however substantial plant and microbial resources that are waiting for biotechnological exploitation in the near future through effective bioprospection In order to exploit plants and microbes for their useful products and processes we need to first understand their basic structure organization growth and development cellular process and overall biology We also need to identify and develop strategies to improve the productivity of plants In view of the above in this two volume book on plant biology and biotechnology the first volume is devoted to various aspects of plant biology and crop improvement It includes 33 chapters contributed by 50 researchers each of which is an expert in his/her own field of research The book begins with an introductory chapter that gives a lucid account on the past present and future of plant biology thereby providing a perfect historical foundation for the chapters that follow Four chapters are devoted to details on the structural and developmental aspects of the structures of plants and their principal organs These chapters provide the molecular biological basis for the regulation of morphogenesis of the form of plants and their organs involving control at the cellular and tissue levels Details on biodiversity the basic raw material for biotechnology are discussed in a separate chapter in which emphasis is placed on the genetic species and ecosystem diversities and their conservation Since fungi and other microbes form an important component of the overall biodiversity special attention is paid to the treatment of fungi and other microbes in this volume Four chapters respectively deal with an overview of fungi arbuscular mycorrhizae and their relation to the sustenance of plant wealth diversity and

practical applications of mushrooms and lichens associated with a photobiont Microbial endosymbionts associated with plants and phosphate solubilizing microbes in the rhizosphere of plants are exhaustively treated in two separate chapters The reproductive strategies of bryophytes and an overview on Cycads form the subject matter of another two chapters thus fulfilling the need to deal with the non flowering Embryophyte group of plants Angiosperms the most important group of plants from a biotechnological perspective are examined exhaustively in this volume The chapters on angiosperms provide an overview and cover the genetic basis of flowers development pre and post fertilization reproductive growth and development seed biology and technology plant secondary metabolism photosynthesis and plant volatile chemicals A special effort has been made to include important topics on crop improvement in this volume The importance of pollination services apomixes male sterility induced mutations polyploidy and climate changes is discussed each in a separate chapter Microalgal nutra pharmaceuticals vegetable oil based nutraceuticals and the importance of alien crop resources and underutilized crops for food and nutritional security form the topics of three other chapters in this volume There is also a special chapter on the applications of remote sensing in the plant sciences which also provides information on biodiversity distribution The editors of this volume believe the wide range of basic topics on plant biology that have great relevance in biotechnology covered will be of great interest to students researchers and teachers of botany and plant biotechnology alike

An Astrobiology Strategy for the Exploration of Mars National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Division on Engineering and Physical Sciences, Space Studies Board, Committee on an Astrobiology Strategy for the Exploration of Mars, 2007-07-26 Three recent developments have greatly increased interest in the search for life on Mars The first is new information about the Martian environment including evidence of a watery past and the possibility of atmospheric methane The second is the possibility of microbial viability on Mars Finally the Vision for Space Exploration initiative included an explicit directive to search for the evidence of life on Mars These scientific and political developments led NASA to request the NRC's assistance in formulating an up to date integrated astrobiology strategy for Mars exploration Among other topics this report presents a review of current knowledge about possible life on Mars an astrobiological assessment of current Mars missions a review of Mars mission planetary protection and findings and recommendations The report notes that the greatest increase in understanding of Mars will come from the collection and return to Earth of a well chosen suite of Martian surface materials

Microgravity Research in Support of Technologies for the Human Exploration and Development of Space and Planetary Bodies Committee on Microgravity Research, Space Studies Board, Commission on Physical Sciences, Mathematics, and Applications, Division on Engineering and Physical Sciences, National Research Council, 2000-07-17 The frontier represented by the near solar system confronts humanity with intriguing challenges and opportunities With the inception of the Human Exploration and Development of Space HEDS enterprise in 1995 NASA has acknowledged the opportunities and has accepted the very significant challenges Microgravity Research in Support of

Technologies for the Human Exploration and Development of Space and Planetary Bodies was commissioned by NASA to assist it in coordinating the scientific information relevant to anticipating identifying and solving the technical problems that must be addressed throughout the HEDS program over the coming decades This report assesses scientific and related technological issues facing NASA s Human Exploration and Development of Space endeavor looking specifically at mission enabling and enhancing technologies which for development require an improved understanding of fluid and material behavior in a reduced gravity environment **International Exploration of Mars** ,1991 **Systematic Exploration of**

Indolizine-Based Small Fluorescent Molecules Youngjun Lee,2018-08-16 This thesis describes an in depth study of an indolizine based fluorophore from understanding of its structure photophysical property relationship to its application as a useful biological reporter Organic fluorophores have been extensively used in the field of molecular biology owing to their excellent photophysical property suitable cell permeability and synthetic flexibility Understanding of the structure photophysical property relationship of a given fluorophore often paves the road to the development of valuable molecular probes to visualize and transcribe biological networks In this thesis respective chapters deal with molecular design organic synthesis structure property analysis and quantum mechanical interpretation of unexplored family of indolizine based molecules This systematic exploration has led to rational development of a new microalgae lipid droplet probe colorful bioorthogonal fluorogenic probes and a bright mitochondrial probe working under live cell conditions Harnessing the optical properties of a given fluorophore has been an important topic for a couple of decades both in industry and in academia This thesis provides useful insights for the improvement and development of unique small fluorescent materials or optical materials *Strategic Considerations for Support of Humans in Space and Moon/Mars Exploration Missions* NASA Advisory Council. Aerospace Medicine Advisory Committee,1992 *Shielding Strategies for Human Space Exploration* J. W.
