New Directions In The Philosophy Of Technology:

New Directions in the Philosophy of Technology Joseph C. Pitt, 2013-03-09 In this collection we finally find the philosophy of technology a young and rapidly developing area of scholarly interest making contact with history of science and technology and mainstream epistemological and metaphysical issues The sophistication of these papers indicates the maturity of the field as it moves away from the advocacy of anti technology ideological posturing toward a deeper understanding of the options and restraints technological developments provide The papers presented here take us over a threshold into the real world of complicated social and technological interactions where science and art are shown to be integral to our understanding of technological change and technological innovations are seen as configuring our knowledge of the world and opening up new possibilities for human development With its rich historical base this volume will be of interest to all students concerned about the interactions among technology society and philosophy

New Directions in the Philosophy of Technology Joseph C. Pitt, 1995 *Plato the Myth Maker* Luc Brisson, 1998 We think of myth as a fictional story and Plato was the first to use the term muthos in that sense But Plato also used muthos to describe the practice of making and telling stories the oral transmission of all that a community keeps in its collective memory In the first part of *Plato the Myth Maker* Luc Brisson reconstructs Plato's multifaceted and not uncritical description of muthos in light of the latter's famous Atlantis story The second part of the book contrasts this sense of myth as Plato does with another form of speech that he believed was far superior the logos of philosophy Appearing for the first time in English *Plato the Myth Maker* is a solid and important contribution to the history of myth based on the privileged testimony of one of its most influential critics and supporters

Science, Technology and Society Wenceslao J. González, 2005 The emphasis on the realm of Science Technology and Society or Science and Technology Studies may have the same degree of relevance that the historical turn had in the past It is a social turn which affects philosophy of science as well as philosophy of technology It includes a new vision of the aims processes and results of scientific activities and technological doings because the focus of attention is on several aspects of science and technology which used to be considered as secondary or even irrelevant This turn highlights science and technology as social undertakings rather than intellectual contents According to this new vision there are several important changes as to what should be studied the objects of research how it should be studied the method and what the consequences for those studies are The new focus of attention can be seen in many changes and among them are several of special interest a from what science and technology are in themselves mainly epistemic contents to how science and technology are made largely social constructions b from the language and structure of basic science to the characteristics of applied science and the applications of science c from technology as a feature through which human beings control their natural surroundings a step beyond technics due to the contribution of science to technology as a social practice and an instrument of power and d from the role of internal values necessary for mature science and innovative technology to

The Ethics of Ordinary Technology Michel Puech,2016-04-28 Technology is even more than our world our form of life our civilization Technology interacts with the world to change it Philosophers need to seriously address the fluidity of a smartphone interface the efficiency of a Dyson vacuum cleaner or the familiar noise of an antique vacuum cleaner Beyond their phenomenological description the emotional experience acquires moral significance and in some cases even supplies ethical resources for the self If we leave this dimension of modern experience unaddressed we may miss something of value in contemporary life Combining European humanism Anglophone pragmatism and Asian traditions Michel Puech pleads for an ethical turn in the way we understand and address technological issues in modern day society Puech argues that the question of power is what needs to be reconsidered today In doing so he provides a three tier distinction of power power to modify the outer world our first intention method in any case technology power over other humans our enduring obsession politics and domination power over oneself ethics and wisdom *Heraclitus Redux: Technological Infrastructures and Scientific Change* Joseph C. Pitt,2019-10-25 Scientific change is often a function of technological innovation new instruments show us new things we could not see before and we then need new theories to explain them One of the results of this process is that what counts as scientific evidence changes and how we do our science changes Hitherto the technologies which make contemporary science possible have been ignored This book aims to correct that omission and to spell out the consequences of taking the technologies behind the doing of science seriously New Directions in Educational Technology and Administration Fred Paas,Srikanta Patnaik,Taosheng Wang,2025-07-14 New Directions in Educational Technology and Administration emphasize the integration of cutting edge tools like artificial

Inside the Politics of Technology Hans Harbers,2005 Though the old saying claims that man is the measure of all things the authors of Inside the Politics of Technology argue that the distinction implied between autonomous humans and neutral instruments of technology is an illusion On the contrary the technologies humans create simultaneously shape humans themselves By means of case studies of technologies as diverse as video cameras electric cars pregnancy tests and genetic screenings this volume considers the implications of this co production of technology and society for our philosophical and political ideas Are only humans endowed with social political and moral agency or does our technology share those qualities And if so how should we understand or practice a politics of technology Beyond Cutting Edge? Paul C. Heidebrecht,2014-03-10 A quick scan of any newsstand is enough to confirm the widespread preoccupation with technological change As a myriad of articles and advertisements demonstrate not only are we preoccupied with technology but we are bombarded with numerous reminders that the cutting edge is in constant motion Most often the underlying assumption of Christians is that we have no choice but to find ways to cope with the latest and greatest Indeed it is often assumed that the church has no choice but to find ways to cope with its new technological context This book does not make the same assumptions Building on the work of Mennonite theologian John Howard Yoder it argues that the practices of the church make it possible for Christians to conscientiously engage technology This happens when we recognize that marks of the church such as patience vulnerability and servanthood can put technological ideals such as speed control and efficiency in their proper place In the course of grappling with three examples of morally formative technologies automobiles genetically modified food and the Internet this book goes beyond Yoder s thought by emphasizing that the church also plays a crucial role in our moral formation

Essays in Post-Critical Philosophy of Technology Mihály Héder,Eszter Nádasi,2019-02-15 Technology in all its forms has had and continues to have an indisputable impact on society and culture Philosophy of technology seeks to understand this impact and the meaning of technology for society and culture Although its

origins can be traced back to the Greeks it wasn't until the late 19th century to the beginning of the 20th century that it gained ground as a philosophical discipline. Now more than ever it is considered an essential philosophical enterprise. The Budapest Workshop on Philosophy of Technology was a lively and successful event that sought to discuss, reflect on and apply this branch of philosophical inquiry to both historical and contemporary examples. Importantly, the contributors' methodological approaches were influenced by, although not limited to, Michael Polanyi's term 'post critical'. Moving beyond the rigidity of past approaches, the selected essays were driven by two lines of inquiry: what has been the historical role of technology in social and scientific change? And how can a post critical approach enhance and extend our understanding of philosophy of technology? This edited volume begins by exploring the role of technology in social and scientific developments from a historical perspective, before moving towards a discussion of philosophy of technology from a Post Critical epistemic stance. Free from the constraints of previous methodologies, the third part of this work engages with the term 'Post Critical' in its broadest sense. The contributors to this section consider the phenomenology of the body and the influence of technology on our lives. Finally, the four concluding chapters of this book apply this philosophical approach to a wide range of contemporary problems, from Decision Support Systems to Crisis Communication.

New Directions in Educational Technology Eileen Scanlon, Tim O'Shea, 2012-12-06. This book is based on the workshop that kickstarted the NATO Science Committee Special Programme on Advanced Educational Technology. We invited the leaders in the field to attend this inaugural meeting and were delighted by the quality of the attendance, the papers delivered at the workshop, and this book. Many of the authors have subsequently run other meetings funded by the Special Programme and have or are in the process of editing books which focus on particular topics. This book covers all the major themes in the area, ranging from fundamental theoretical work to empirical studies of state-of-the-art technological innovations. Tim O'Shea chaired the NATO Survey Group which planned the Programme and the subsequent Panel which disbursed funds in the first two years of the Programme. He would like to thank the other group and panel members, namely Professor N. Balacheff, Professor D. Björner, Professor H. Bouma, Professor P. C. Duchastel, Professor A. Dias de Figueiredo, Dr D. Jonassen, and Professor T. Liao. He would like to offer his special thanks to Dr L. V. da Cunha, the NATO Programme Director, for his unfailing support and patience. Eileen Scanlon was the Director of the Workshop, which is the basis of this book. She offers heartfelt thanks to the contributors and to the following who provided practical help with the meeting or the production of this book: Mrs Pauline Adams, Dr Mike Baker, Mrs Kathy Evans, Mrs Patricia Roe, Mr Dave Perry, and Ms Fiona Spensley.

Epistemology and the Social ,2015-06-29 Epistemology had to come to terms with the social on two different occasions The first was represented by the dispute about the epistemological status of the social sciences and in this case the already well established epistemology of the natural sciences seemed to have the right to dictate the conditions for a discipline to be a science But the social sciences could successfully vindicate the legitimacy of their specific criteria for scientificity More recently the impact of social factors on the construction of our knowledge including scientific knowledge has reversed in a certain sense the old position and promoted social inquiry to the role of a criterion for evaluating the purport of cognitive including scientific statements But this has undermined the traditional characteristics of objectivity and rigor that seem constitutive of science Moreover in order to establish the real extent to which social conditionings have an impact on scientific knowledge one must credit sociology with a sound ground of reliability and this is not possible without a preliminary epistemological assessment These are some of the topics discussed in this book both theoretically and with reference to concrete cases

Philosophy of Technology after the Empirical Turn Maarten Franssen,Pieter E. Vermaas,Peter Kroes,Anthonie W.M. Meijers,2016-06-23 This volume features 16 essays on the philosophy of technology that discuss its identity its position in philosophy in general and the role of empirical studies in philosophical analyses of engineering ethics and engineering practices This volume is published about fifteen years after Peter Kroes and Anthonie Meijers published a collection of papers under the title The empirical turn in the philosophy of technology in which they called for a reorientation toward the practice of engineering and sketched the likely benefits for philosophy of technology of pursuing its major questions in an empirically informed way The essays in this volume fall apart in two different kinds One kind follows up on The empirical turn discussion about what the philosophy of technology is all about It continues the search for the identity of the philosophy of technology by asking what comes after the empirical turn The other kind of essays follows the call for an empirical turn in the philosophy of technology by showing how it may be realized with regard to particular topics Together these essays offer the reader an overview of the state of the art of an empirically informed philosophy of technology and of various views on the empirical turn as a stepping stone into the future of the philosophy of technology
