The markets for space and varied property assets including residential office retail and industrial are presented, analyzed and integrated into a complete understanding of the role of real estate markets within the workings of contemporary urban economies. Unlike other books on market analysis, the economic and financial theory in this book is rigorous and well integrated with the specifics of the real estate market. Furthermore, it is thoroughly explained as it assumes no previous coursework in economics or finance on the part of the reader. The theoretical discussion is backed up with numerous real estate case study examples and problems which are presented throughout the text to assist both student and teacher. Including discussion questions, exercises, several web links and online slides, this textbook is suitable for use on a variety of degree programs in real estate finance, business planning and economics at undergraduate and MSc/MBA level. It is also a useful primer for professionals in these disciplines.
