New Insights Into Retinal Degenerative Diseases Robert E. Anderson, Matthew M. LaVail, Joe G. Hollyfield, 2012-12-06 Since 1984 we have organized satellite symposia on retinal degenerations that are held in conjunction with the biennial International Congress of Eye Research The timing and location of our Retinal Degeneration Symposia have allowed scientists and clinicians from around the world to convene and present their exciting new findings The symposia have been arranged to allow ample time for discussions and one on one interactions in a relaxed atmosphere where international friendships and collaborations could be established The IXth International Symposium on Retinal Degeneration was held on October 9 14 2000 in Durango Colorado and was attended by over 100 scientists from six continents This book contains many of their presentations Several events of note occurred at this meeting First thanks to the generous support of the Foundation Fighting Blindness we were able to sponsor the travel of 11 young scientists from six countries Most of them have contributed chapters to this volume The response to the travel program was so overwhelming that we will make it regular feature of our meeting This will allow other bright young investigators to be introduced to the world experts who study retinal degenerations Second about 40% of the scientists who attended this meeting were there for the first time We believe that this indicates a growing interest in retinal degeneration research and ensures that new talent will be attracted to this important area of investigation The symposium received support from several organizations *Retinal Degenerative Diseases* Joe G. Hollyfield, Robert E. Anderson, Matthew M. LaVail, 2007-08-06 Retinal Degenerations is the result of the International Symposium on Retinal degeneration which has become perhaps the most important research meeting in the field The topics in this volume explore the etiology cellular mechanisms epidemiology genetics models and potential therapeutic measures for the blinding diseases of retinitis pigmentosa and age related macular degeneration Retinal Degenerative Diseases Matthew M. LaVail, John Ash, Robert E. Anderson, Joe G. Hollyfield, Christian Grimm, 2011-12-21 This book will contain the proceedings of the XIV International Symposium on Retinal Degeneration RD2010 held July 13 17 2010 in Mont Tremblant Quebec Canada The volume will present representative state of the art research in almost all areas of retinal degenerations ranging from cytopathologic physiologic diagnostic and clinical aspects animal models mechanisms of cell death candidate genes cloning mapping and other aspects of molecular genetics and developing potential therapeutic measures such as gene therapy and neuroprotective agents for potential pharmaceutical therapy *Retinitis: New Insights for the Healthcare Professional: 2012 Edition*, 2012-12-10 Retinitis New Insights for the Healthcare Professional 2012 Edition is a ScholarlyPaper that delivers timely authoritative and intensively focused information about Retinitis in a compact format The editors have built Retinitis New Insights for the Healthcare Professional 2012 Edition on the vast information databases of ScholarlyNews You can expect the information about Retinitis in this eBook to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of Retinitis New

The blinding diseases of inherited retinal degenerations have no treatments and age-related macular degeneration has no cures despite the fact that it is an epidemic among the elderly with 1 in 3-4 affected by the age of 70. The RD Symposium will focus on the exciting new developments aimed at understanding these diseases and providing therapies for them. Since most major scientists in the field of retinal degenerations attend the biennial RD Symposia, they are known by most as the best and most important meetings in the field. The volume will present representative state-of-the-art research in almost all areas of retinal degenerations ranging from cytopathologic, physiologic, diagnostic and clinical aspects, animal models, mechanisms of cell death, candidate genes, cloning, mapping and other aspects of molecular genetics and developing potential therapeutic measures such as gene therapy and neuroprotective agents for potential pharmaceutical therapy. While advances in these areas of retinal degenerations will be described, there will be many new topics that either were in their infancy or did not exist at the time of the last RD Symposium RD2014. These include the role of inflammation and immunity as well as other basic mechanisms in age-related macular degeneration, several new aspects of gene therapy and revolutionary new imaging and functional testing that will have a huge impact on the diagnosis and following the course of retinal degenerations as well as to provide new quantitative endpoints for clinical trials. The retina is an approachable part of the central nervous system (CNS) and there is a major interest in neuroprotective and gene therapy for CNS diseases and neurodegenerations in general. It should be noted that with successful and exciting initial clinical trials in neuroprotective and gene therapy including the restoration of sight in blind children, the retinal degeneration therapies are leading the way towards new therapeutic measures for neurodegenerations of the CNS. Many of the successes recently reported in these areas of retinal degeneration sprang from collaborations established at previous RD Symposia and many of those will be reported at the RD2018 meeting and included in the proposed volume. We anticipate the excitement of those working in the field and those afflicted with

retinal degenerations will be reflected in the volume

Retinal Degenerative Diseases and Experimental Therapy Joe G. Hollyfield, Robert E. Anderson, Matthew M. LaVail, 2007-09-04 To create a forum for scientists and clinicians interested in degenerative retinal diseases we began in 1984 to organize a biennial symposium on Retinal Degeneration as a satellite meeting of the International Congress of Eye Research The timing and varying location of these meetings provides an important assembly for investigators from throughout the world to convene for presentation of their new findings on the causes and potential therapies for degenerative retinal disorders The VIII International Symposium on Retinal Degeneration was held from July 28-25 1998 at the Hotel Vier Jahreszeiten in Schluchsee a small town in the Black Forest of southwestern Germany Most of the participants in this meeting contributed to this volume and we are appreciative of the efforts of each author in making this publication possible The research presented at the meeting and described in this proceedings volume reflects a strong emphasis on the molecular genetic approach to understanding these disorders Several of the papers provide important new insights into the mechanism of photoreceptor degeneration and cell death A number of the studies are targeted at retarding or reversing the degeneration process Included for the first time are presentations from all the principal laboratories involved in the field of visual prostheses implant chip technology in which investigations are targeted at restoring vision in eyes that have lost photoreceptor cells A variety of diagnostic clinical histopathological and physiological assessments of retinal degeneration in patients are also included
