Bazaraa, Hanif D. Sherali, C. M. Shetty, 2013-06-12 COMPREHENSIVE COVERAGE OF NONLINEAR PROGRAMMING THEORY AND ALGORITHMS THOROUGHLY REVISED AND EXPANDED Nonlinear Programming Theory and Algorithms now in an extensively updated Third Edition addresses the problem of optimizing an objective function in the presence of equality and inequality constraints

Many realistic problems cannot be adequately represented as a linear program owing to the nature of the nonlinearity of the objective function and or the nonlinearity of any constraints The Third Edition begins with a general introduction to nonlinear programming with illustrative examples and guidelines for model construction Concentration on the three major parts of nonlinear programming is provided Convex analysis with discussion of topological properties of convex sets separation and support of convex sets polyhedral sets extreme points and extreme directions of polyhedral sets and linear programming Optimality conditions and duality with coverage of the nature interpretation and value of the classical Fritz John FJ and the Karush Kuhn Tucker KKT optimality conditions the interrelationships between various proposed constraint qualifications and Lagrangian duality and saddle point optimality conditions Algorithms and their convergence with a presentation of algorithms for solving both unconstrained and constrained nonlinear programming problems Important features of the Third Edition include New topics such as second interior point methods nonconvex optimization nondifferentiable optimization and more Updated discussion and new applications in each chapter Detailed numerical examples and graphical illustrations Essential coverage of modeling and formulating nonlinear programs Simple numerical problems Advanced theoretical exercises The book is a solid reference for professionals as well as a useful text for students in the fields of operations research management science industrial engineering applied mathematics and also in engineering disciplines that deal with analytical optimization techniques The logical and self contained format uniquely covers nonlinear programming techniques with a great depth of information and an abundance of valuable examples and illustrations that showcase the most current advances in nonlinear problems

Progress in Mathematical Programming Nimrod Megiddo, 2012-12-06 The starting point of this volume was a conference entitled Progress in Mathematical Programming held at the Asilomar Conference Center in Pacific Grove California March 1 4 1987 The main topic of the conference was developments in the theory and practice of linear programming since Karmarkar's algorithm There were thirty presentations and approximately fifty people attended Presentations included new algorithms new analyses of algorithms reports on computational experience and some other topics related to the practice of mathematical programming Interestingly most of the progress reported at the conference was on the theoretical side Several new polynomial algorithms for linear programming were presented Barnes Chopra Jensen Goldfarb Mehrotra Gonzaga Kojima Mizuno Yoshise Renegar Todd Vaidya and Ye Other algorithms presented were by Betke Gritzmann Blum Gill Murray Saunders Wright Nazareth Vial and Zikan Cottle Efforts in the theoretical analysis of algorithms were also reported Anstreicher Bayer Lagarias Imai Lagarias Megiddo Shub Lagarias Smale and Vanderbei Computational experiences were reported by Lustig Tomlin Todd Tone Ye and Zikan Cottle Of special interest although not in the main direction discussed at the conference was the report by Rinaldi on the practical solution of some large traveling salesman problems At the time of the conference it was still not clear whether the new algorithms developed since Karmarkar's algorithm would replace the simplex method in practice Alan Hoffman presented results on conditions

under which linear programming problems can be solved by greedy algorithms

Mixed Integer Nonlinear Programming Jon Lee, Sven Leyffer, 2011-12-02 Many engineering operations and scientific applications include a mixture of discrete and continuous decision variables and nonlinear relationships involving the decision variables that have a pronounced effect on the set of feasible and optimal solutions Mixed integer nonlinear programming MINLP problems combine the numerical difficulties of handling nonlinear functions with the challenge of optimizing in the context of nonconvex functions and discrete variables MINLP is one of the most flexible modeling paradigms available for optimization but because its scope is so broad in the most general cases it is hopelessly intractable Nonetheless an expanding body of researchers and practitioners including chemical engineers operations researchers industrial engineers mechanical engineers economists statisticians computer scientists operations managers and mathematical programmers are interested in solving large scale MINLP instances
