**Development** Achilleas Achilleos,Stefano Forti,George Angelos Papadopoulos,Ilias Pappas,2025-09-27 This book constitutes the refereed proceedings of the 24th IFIP WG 6.11 Conference on e Business e Services and e Society I3E 2025 held in Limassol Cyprus during September 9-11 2025 The 34 full papers presented in this volume were carefully reviewed and selected from 73 submissions They were organized in topical sections as follows Smart Public Services and Technologies AI driven Services and Business Innovation Decision making and Digital Risk Management Ethics Well being and Sustainability in Digital Society Systematic Reviews and Comparative Studies An individual-centered approach to visualize people's opinions and demographic information Wanda Baltzer,Theresa Hradilak,Lara Pfennigschmidt,Luc Maurice Prestin,Moritz Spranger,Simon Stadlinger,Leo Wendt,Jens Lincke,Patrick Rein,Luke Church,Robert Hirschfeld,2021-11-05 The noble way to substantiate decisions that affect many people is to ask these people for their opinions For governments that run whole countries this means asking all citizens for their views to consider their situations and needs Organizations such as Africa's Voices Foundation who want to facilitate communication between decision makers and citizens of a country have difficulty mediating between these groups To enable understanding statements need to be summarized and visualized Accomplishing these goals in a way that does justice to the citizens voices and situations proves challenging Standard charts do not help this cause as they fail to create empathy for the people behind their graphical abstractions Furthermore these charts do not create trust in the data they are representing as there is no way to see or navigate back to the underlying code and the original data To fulfill these functions visualizations would highly benefit from interactions to explore the displayed data which standard charts often only limitedly provide To help improve the understanding of people's voices we developed and categorized 80 ideas for new visualizations new interactions and better connections between different charts which we present in this report From those ideas we implemented 10 prototypes and two systems that integrate different visualizations We show that this integration allows consistent appearance and behavior of visualizations The visualizations all share the same main concept representing each individual with a single dot To realize this idea we discuss technologies that efficiently allow the rendering of a large number of these dots With these visualizations direct interactions with representations of

individuals are achievable by clicking on them or by dragging a selection around them This direct interaction is only possible with a bidirectional connection from the visualization to the data it displays We discuss different strategies for bidirectional mappings and the trade offs involved Having unified behavior across visualizations enhances exploration For our prototypes that includes grouping filtering highlighting and coloring of dots Our prototyping work was enabled by the development environment Lively4 We explain which parts of Lively4 facilitated our prototyping process Finally we evaluate our approach to domain problems and our developed visualization concepts Our work provides inspiration and a starting point for visualization development in this domain Our visualizations can improve communication between citizens and their government and motivate empathetic decisions Our approach combining low level entities to create visualizations provides value to an explorative and empathetic workflow We show that the design space for visualizing this kind of data has a lot of potential and that it is possible to combine qualitative and quantitative approaches to data analysis
