Practical Conic Sections J. W. Downs, 2003-01-01 Illustrated with interesting examples from everyday life this text shows how to create ellipses parabolas and hyperbolas It also presents historical background on their ancient origins and describes the reflective properties and roles of curves in design applications Only a basic knowledge of plane geometry needed 1993 edition Includes 98 figures Practical Conic Sections J. W. Downs, 2012-10-16 Using examples from everyday life this text studies ellipses parabolas and hyperbolas Explores their ancient origins and describes the reflective properties and roles of curves in design applications 1993 edition Includes 98 figures **Theory of Games and Statistical Decisions** David A. Blackwell, M. A. Girshick, 2012-06-14 Evaluating statistical procedures through decision and game theory as first proposed by Neyman and Pearson and extended by Wald is the goal of this problem oriented text in mathematical statistics First year graduate students in statistics and other students with a background in statistical theory and advanced calculus will find a rigorous thorough presentation of statistical decision theory treated as a special case of game theory The work of Borel von Neumann and Morgenstern in game theory of prime importance to decision theory is covered in its relevant aspects reduction of games to normal forms the minimax theorem and the utility theorem With this introduction Blackwell and Professor Girshick look at Values and Optimal Strategies in Games General Structure of Statistical Games Utility and Principles of Choice Classes of Optimal Strategies Fixed Sample Size Games with Finite and with Infinite A Sufficient Statistics and the Invariance Principle Sequential Games Bayes and Minimax Sequential Procedures Estimation and Comparison of Experiments A few topics not directly applicable to statistics such as perfect information theory are also discussed Prerequisites for full understanding of the procedures in this book include knowledge of elementary analysis and some familiarity with matrices determinants and linear dependence For purposes of formal development only discrete distributions are used though continuous distributions are employed as illustrations The number and variety of problems presented will be welcomed by all students computer experts and others using statistics and game theory This comprehensive and sophisticated introduction remains one of the strongest and most useful approaches to a field which today touches areas as diverse as gambling and particle physics The Foundations of Statistics Leonard J. Savage, 1972-06-01 Classic analysis of the subject and the development of personal probability one of the greatest controversies in modern statistical thought New preface and new footnotes to 1954 edition with a supplementary 180 item annotated bibliography by author Calculus probability statistics and Boolean algebra are recommended **An Introduction to Differential Equations and Their Applications** Stanley J. Farlow, 2012-10-23 This introductory text explores 1st and 2nd order differential equations series solutions the Laplace transform difference equations much more Numerous figures problems with solutions notes 1994 edition Includes 268 figures and 23 tables Dynamic Programming Richard Bellman, 2013-04-09 Introduction to mathematical theory of multistage decision processes takes a functional equation approach Topics include existence and

Methods of Thermodynamics Howard Reiss, 1996-01-01 Outstanding text focuses on physical technique of thermodynamics typical problems and significance and use of thermodynamic potential Mathematical apparatus first law of thermodynamics second law and entropy more 1965 edition *An Introduction to Lebesgue Integration and Fourier Series*

Howard J. Wilcox, David L. Myers, 2012-04-30 This book arose out of the authors desire to present Lebesgue integration and

Fourier series on an undergraduate level since most undergraduate texts do not cover this material or do so in a cursory way. The result is a clear, concise, well-organized introduction to such topics as the Riemann integral, measurable sets, properties of measurable sets, measurable functions, the Lebesgue integral, convergence, and the Lebesgue integral, pointwise convergence of Fourier series, and other subjects. The authors not only cover these topics in a useful and thorough way; they have taken pains to motivate the student by keeping the goals of the theory always in sight, justifying each step of the development in terms of those goals. In addition, whenever possible, new concepts are related to concepts already in the student's repertoire. Finally, to enable readers to test their grasp of the material, the text is supplemented by numerous examples and exercises. Mathematics students as well as students of engineering and science will find here a superb treatment, carefully thought out and well presented, that is ideal for a one-semester course. The only prerequisite is a basic knowledge of advanced calculus, including the notions of compactness, continuity, uniform convergence, and Riemann integration. Modern Algebra Seth Warner, 2012-08-29. Standard text provides an exceptionally comprehensive treatment of every aspect of modern algebra. Explores algebraic structures, rings, and fields, vector spaces, polynomials, linear operators, much more. Over 1,300 exercises. 1965 edition. **History of the Theory of Numbers** Leonard Eugene Dickson, 2012-01-27. This 1st volume in the series *History of the Theory of Numbers* presents the material related to the subjects of divisibility and primality. This series is the work of a distinguished mathematician who taught at the University of Chicago for 4 decades and is celebrated for his many contributions to number theory and group theory. 1919 edition. *Fundamental Concepts of Algebra* Bruce Elwyn Meserve, 1982-01-01. Uncommonly interesting introduction illuminates complexities of higher mathematics while offering a thorough understanding of elementary mathematics. Covers development of complex number system and elementary theories of numbers, polynomials, and operations, determinants, matrices, constructions, and graphical representations. Several exercises without solutions.
