Streiner, 2008 This new edition of the book will be produced in two versions The textbook will include a CD Rom with two videotaped lectures by the authors This book translates biostatistics in the health sciences literature with clarity and irreverence Students and practitioners alike applaud Biostatistics as the practical guide that exposes them to every statistical test they may encounter with careful conceptual explanations and a minimum of algebra What's New The new Bare Essentials reflects recent advances in statistics as well as time honored methods For example hierarchical linear modeling which first appeared in psychology journals and only now is described in medical literature Also new is a chapter on testing for equivalence and non inferiority As well as a chapter with information to get started with the computer statistics program SPSS Free of calculations and jargon Bare Essentials speaks so plainly that you won't need a technical dictionary No math all concepts The objective is to enable you to determine if the research results are applicable to your own patients Throughout the guide you'll find highlights of areas in which researchers misuse or misinterpret statistical tests We have labeled these C R A P Detectors Convolved Reasoning and Anti intellectual Pomposity which help you to identify faulty methodology and misuse of statistics **Research Methods in Applied Settings** Jeffrey A. Gliner, George A. Morgan, Nancy L. Leech, 2000-02 The authors of this unique text found that while most students can crunch the numbers quite easily and accurately with a calculator or computer many have trouble seeing the big picture or seeing how research questions and design influence data analysis As a result the authors developed a semantically consistent framework that integrates traditional research approaches experimental quasi experimental comparative into three basic kinds of research questions difference associational and descriptive which in turn lead to three kinds or groups of statistics with the same names This text helps students become good consumers of research by demonstrating how to analyze and evaluate research articles offers a number of summarizing diagrams and tables that clarify confusing or difficult to learn topics points out the value of qualitative research and how it should lead quantitative researchers to be more flexible divides all quantitative

research questions into five logically consistent categories that help students select appropriate statistics and understand their cause and effect and classifies design into three major types between groups within subjects and mixed groups and shows that although these three types use the same general type of statistics e g ANOVA the specific statistics in between groups design are different from those in within subjects and mixed groups '*American Book Publishing Record*'
