Alleman, Eli M. Noam, 2007-08-19 Randall B Lowe Piper Marbury L L R The issue of costing and pricing in the telecommunications industry has been hotly debated for the last twenty years Indeed we are still wrestling today over the cost of the local exchange for access by interexchange and competitive local exchange carriers as well as for universal service funding The U S telecommunications world was a simple one before the emergence of competition comprising only AT T and independent local exchange carriers Costs were allocated between intrastate and interstate jurisdictions and then again between intrastate local and toll The Bell System then divided

those costs among itself using a process referred to as the division of revenues and independents using a process called settlements Tolls subsidized local calls to keep the politicians happy and the firm as a whole covered its costs and made a fair return State regulators however lacked the wherewithal to audit this process Their concerns centered generally on whether local rates irrespective of costs were at a politically acceptable level Although federal regulators were better able to determine the reasonableness of the process and the resulting costs they adopted an approach of continuous surveillance where like the state regulator the appearance of reasonableness was what mattered With the advent of competition this historical costing predicate had to change The Bell System as well as the independents were suddenly held accountable
