Toward a New Socialism Anatole Anton, Richard Schmitt, 2007-01-01 Toward a New Socialism offers a critical analysis of capitalism's failings and the imminent need for socialism as an alternative form of government. This book demonstrates that capitalism is destructive and limiting to the many ongoing campaigns to increase freedom, equality, and security. Dr. Richard Schmitt joins with Dr. Anatole Anton to compile a volume of essays exploring the benefits and consequences of a socialist system as an avenue of increased human solidarity and ethical principle. The essays offer a new definition of socialism by investigating the theories and principles of socialism, its influence on social institutions, and its role in work dynamics. Raising important and unavoidable questions for contemporary society, Toward a New Socialism is a vital resource for scholars of political theory and the globalization movement, as well as a necessary read for every citizen under capitalism.

The Truth and Other Stories Stanislaw Lem, 2022-09-13 Twelve stories by science fiction master Stanislaw Lem, nine of them never before published in English. Of these twelve short stories by science fiction master Stanislaw Lem, only three have previously appeared in English, making this the first new book of fiction by Lem since the late 1980s. The stories display the full range of Lem's intense curiosity about scientific ideas, as well as his sardonic approach to human nature, presenting as multifarious a collection of mad scientists as any reader could wish for. Many of these stories feature artificial intelligences or artificial life forms, long a Lem preoccupation. Some feature quite insane theories of cosmology or evolution. All are thought-provoking and scathingly funny. Written from 1956 to 1993, the stories are arranged in chronological order. In the title story, 'The Truth,' a scientist in an insane asylum theorizes that the sun is alive. 'The Journal' appears to be an account by an omnipotent being describing the creation of infinite universes, until in a classic Lem twist it turns out to be no such thing. In 'An Enigma,' beings debate whether offspring can be created without advanced degrees and design templates. Other stories feature a computer that can predict the future by 137 seconds, matter-destroying spores, a hunt in which the prey is a robot, and an electronic brain eager to go on the lam. These stories are peak Lem, exploring ideas and themes that resonate throughout his writing.

**Employment and Economic Performance** Jonathan Michie, John Grieve Smith, 1997 With the end of the post-war boom in the early 1970s, the world economy has experienced large-scale unemployment. From an assumption that the unemployment problem had been solved and that full employment could be maintained through demand management techniques, we now live in an entirely different world. Any suggestion of a return to full employment is met with questions of whether such a thing is possible, whether it would not lead to inflation, or to excessive trade union power, or in the case of individual economies to unsustainable balance of payment deficits. The contributors to this volume ask whether full employment policies would be affordable. Would they lead to yawning fiscal deficits which would in the end require a U-turn in policy, with unemployment reappearing? This well

informed and original contribution to current policy debate faces up to these questions and considers what would be involved in a move to much lower levels of unemployment

**Frankenstein Urbanism** Federico Cugurullo, 2021-05-16 This book tells the story of visionary urban experiments shedding light on the theories that preceded their development and on the monsters that followed and might be the end of our cities The narrative is threefold and delves first into the eco city second the smart city and third the autonomous city intended as a place where existing smart technologies are evolving into artificial intelligences that are taking the management of the city out of the hands of humans The book empirically explores Masdar City in Abu Dhabi and Hong Kong to provide a critical analysis of eco and smart city experiments and their sustainability and it draws on numerous real life examples to illustrate the rise of urban artificial intelligences across different geographical spaces and scales Theoretically the book traverses philosophy urban studies and planning theory to explain the passage from eco and smart cities to the autonomous city and to reflect on the meaning and purpose of cities in a time when human and non biological intelligences are irreversibly colliding in the built environment Iconoclastic and prophetic Frankenstein Urbanism is both an examination of the evolution of urban experimentation through the lens of Mary Shelley s Frankenstein and a warning about an urbanism whose product resembles Frankenstein s monster a fragmented entity which escapes human control and human understanding Academics students and practitioners will find in this book the knowledge that is necessary to comprehend and engage with the many urban experiments that are now alive ready to leave the laboratory and enter our cities

**Environmentalism Unbound** Robert Gottlieb, 2002-08-02 A call for a broadened environmental movement that addresses issues of everyday life In *Environmentalism Unbound* Robert Gottlieb proposes a new strategy for social and environmental change that involves reframing and linking the movements for environmental justice and pollution prevention According to Gottlieb the environmental movement's narrow conception of environment has isolated it from vital issues of everyday life such as workplace safety healthy communities and food security that are often viewed separately as industrial community or agricultural concerns This fragmented approach prevents an awareness of how these issues are also environmental issues After tracing a history of environmental perspectives on land and resources city and countryside and work and industry Gottlieb focuses on three compelling examples of this new approach to social and environmental change The first involves a small industry dry cleaning and the debate over pollution prevention approaches the second involves a set of products janitorial cleaning supplies that may be hazardous to workers and the third explores the obstacles and opportunities presented by community or regional approaches to food supply in the face of an increasingly globalized food system

**The Political Economy of South Africa's Post-apartheid Transition** Benjamin Fine, 2025-05-26 South Africa's post apartheid transition has proven disastrous It is marked by the emergence of a black elite of enriched capitalists out of the globalisation neoliberalisation and financialisation of the economy in general and of its Minerals Energy and Financial Complex in particular By contrast inequalities poverty and failing social provision have persisted Recent attention has shifted to how this disastrous trajectory was initiated some suggesting a lack of available alternative policy options at the time of transition This is shown to be false with a full range of progressive alternatives being rejected with corresponding consequences from state capture to electoral defeat

In the Nature of Cities Nik Heynen, Maria Kaika, Erik Swyngedouw, 2006-03-23 The social and material production of urban nature has recently emerged as an important area in urban studies human environmental interactions and social studies This has been prompted by the recognition that the material conditions that comprise urban environments are not independent from social political and economic processes or from the cultural construction of what constitutes the urban or the natural Through both theoretical and empirical analysis this groundbreaking collection offers an integrated and relational approach to untangling the interconnected processes involved in forming urban landscapes The essays in this book attest that the re entry of the ecological agenda into urban theory is vital both in terms of understanding contemporary urbanization processes and of engaging in a meaningful environmental politics They debate the central themes of whose nature is or becomes urbanized and the uneven power relations through which this socio metabolic transformation takes place Including urban case studies international research and contributions from prominent urban scholars this volume will enable students scholars and researchers of geographical environmental and urban studies to better understand how interrelated everyday economic political and cultural processes form and transform urban environments

*The Socialist Challenge Today* Leo Panitch, Sam Gindin, 2020-05-05 Leo Panitch Sam Gindin and Stephen Maher provide a newly updated and expanded primer for twenty first century democratic socialists The Socialist Challenge Today presents an essential

historical theoretical and critical perspective for understanding the potential as well as the limits of three important recent phenomena the Sanders electoral insurgency in the United States the Syriza experience in Greece and Corbyn's leadership of the Labour Party in the United Kingdom The renowned coauthors compellingly convey the importance of developing strategic and practical capacities to democratically transform state structures so as to render them fit for realizing collective democracy social equality sustainable ecology and human solidarity *Realism and Sociology* Justin

Cruickshank, 2007-01-24 In recent years methodological debates in the social sciences have increasingly focused on issues relating to epistemology *Realism and Sociology* makes an original contribution to the debate charting a middle ground between postmodernism and positivism Critics often hold that realism tries to assume some definitive account of reality Against this it is argued throughout the book that realism can combine a strong definition of social reality with an anti foundational approach to knowledge The position of realist anti foundationalism that is argued for is developed and defended via the use of immanent critiques These deal primarily with post Wittgensteinian positions that seek to define knowledge and social reality in terms of rule following practices within different forms of life and language games Specifically the argument engages with Rorty's neo pragmatism and the structuration theory of Giddens The philosophy of Popper is also drawn upon in a critically appreciative way While the positions of Rorty and Giddens seek to deflate the claims of grand theory albeit in different ways they both end up with definitive claims about knowledge and reality that preclude social research By avoiding the general deflationary approach that relies on reference to practices realism is able to combine a strong social ontology with an anti foundational epistemology and thus act as an underlabourer for empirical research **The Politics of**

**Deforestation and REDD+ in Indonesia** David Aled Williams, 2023-06-01 This book reflects on Indonesia's recent experience with REDD Reducing Emissions from Deforestation and forest Degradation all set within a broader discussion of neoliberal environmentalism hyper capitalism and Indonesian carbon politics Drawing on the author's political ethnographic fieldwork conducted in Jakarta Central Sulawesi and Oslo where the author examined Norway's interests and role in implementing REDD this book discusses the long evolution of the idea that foreign state and private financing can be used to protect tropical forests and the carbon stored within them resulting in both local economic development and global climate benefits It shows how neoliberal environmental approaches to climate change of which REDD is a leading example increase the severity of political contestations that must be overcome to reach global climate mitigation goals and how recent incarnations of REDD have tended to forget earlier scholarly advice to couple anti deforestation approaches with policies that reduce industrial carbon emissions In Indonesia tectonic political and economic forces are shown to have negatively impacted REDD implementation Using a political ecology approach the book links the literature on REDD with that covering Indonesia's recent democratic regression highlighting how the country's environmental performance is inextricably linked to the timbre of its political governance Given the severity of the political contestations that must be overcome to reach its

stated goals REDD cannot replace global policies that drastically reduce industrial carbon emissions This book will be of great interest to students and scholars of political ecology deforestation climate change environmental politics natural resource management and environmental conservation
