Advances in Artificial Life Dario Floreano, Jean-Daniel Nicoud, Francesco Mondada, 2007-10-23 No matter what your perspective is what your goals are or how experienced you are Artificial Life research is always a learning experience The variety of phenomena that the people who gathered in Lausanne reported and discussed for the fifth time since 1991 at the European Conference on Artificial Life ECAL has not been programmed crafted or assembled by analytic design It has evolved emerged or appeared spontaneously from a process of artificial evolution self organisation or development Artificial Life is a field where biological and artificial sciences meet and blend together where the dynamics of biological life are reproduced in the memory of computers where machines evolve behave and communicate like living organisms where complex life like entities are synthesised from electronic chromosomes and artificial chemistries The impact of Artificial Life in science philosophy and technology is tremendous Over the years the synthetic approach has established itself as a powerful method for investigating several complex phenomena of life From a philosophical standpoint the notion of life and of intelligence is continuously reformulated in relation to the dynamics of the system under observation and to the embedding environment no longer a privilege of carbon based entities with brains and eyes At the same time the possibility of engineering machines and software with life like properties such as evolvability self repair and self maintenance is gradually becoming reality bringing new
