Neuroparasitology and Tropical Neurology Hector H.

Garcia, Herbert B. Tanowitz, Oscar H. Del Brutto, 2013-07-03 Neuroparasitology and Tropical Neurology a new volume in The Handbook of Clinical Neurology provides a comprehensive and contemporary reference on parasitic infections of the human nervous system Parasitic infections are varied and some are resolved by the host's immune system other infections may become established even though unnoticed and some cause severe disease and death In our modern world neuroparasitoses are no longer geographically isolated and these infections now appear worldwide Outside of a very few well understood pathologies most parasitic infections have been neglected in the neurological literature and most neurologists have never diagnosed such an infection This volume details how with the advent of modern neuroimaging techniques improved diagnostic applications of molecular biology more accurate immunodiagnosis and minimally invasive neurosurgery human nervous system parasitoses are now diagnosed and treated with increasing frequency The book is divided into six sections and begins with an introduction to the mechanisms of infection diagnosis and pathology of parasitic diseases Subsequent chapters detail protozoan diseases and a section covering each of the major classes of human infecting helminths nematodes roundworms trematodes flukes and cestodes tapeworms The final section contains chapters on other important areas of tropical clinical medicine including the neurological complications of venomous bites and tropical nutritional deficiencies Neuroparasitology and Tropical Neurology will be of interest to neurologists neurosurgeons and other health professionals encountering patients with parasitic infections A comprehensive reference resource on the diagnosis and treatment of parasitic infections of the human nervous system Focuses on the impact of modern neuroimaging techniques improved diagnostic applications of molecular biology more accurate immunodiagnosis and minimally invasive neurosurgery to diagnose parasitoses International list of contributors including the leading workers in the field Neuroparasitology and Tropical Neurology Sandra K. Halonen, Louis M. Weiss, 2013-07-03 Toxoplasma gondii an Apicomplexan is a pathogenic protozoan that can infect the central nervous system Infection during pregnancy can result in a congenital infection with severe neurological sequelae In immunocompromised individuals reactivation of latent neurological foci can result in encephalitis Immunocompetent individuals infected with T gondii are typically asymptomatic and maintain this infection for

life However recent studies suggest that these asymptomatic infections may have effects on behavior and other physiological processes *Toxoplasma gondii* infects approximately one third of the world population making it one of the most successful parasitic organisms Cats and other felidae serve as the definite host producing oocysts an environmentally resistant life cycle stage found in cat feces which can transmit the infection when ingested orally A wide variety of warm blooded animals including humans can serve as the intermediate host in which tissue cysts containing bradyzoites develop Transmission also occurs due to ingestion of the tissue cysts There are three predominant clonal lineages termed Types I II and III and an association with higher pathogenicity with the Type I strains in humans has emerged This chapter presents a review of the biology of this infection including the life cycle transmission epidemiology parasite strains and the host immune response The major clinical outcomes of congenital infection chorioretinitis and encephalitis and the possible association of infection of toxoplasmosis with neuropsychiatric disorders such as schizophrenia are reviewed
